After tracking

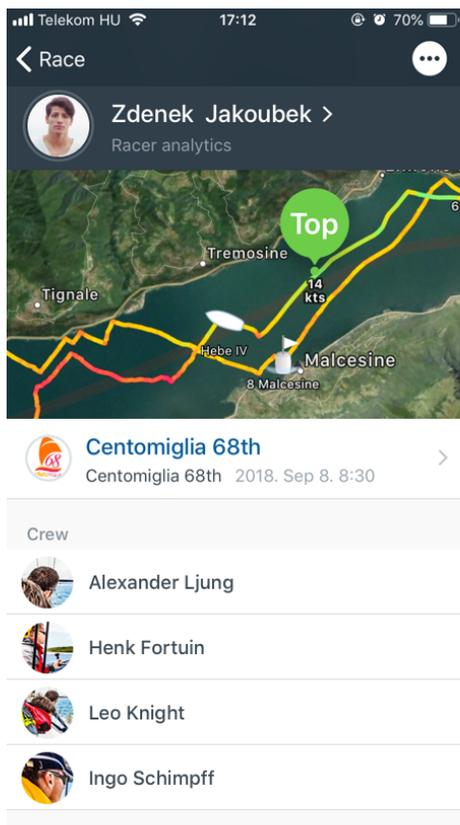

Analytics

Analyze your performance with our beautiful analytics.

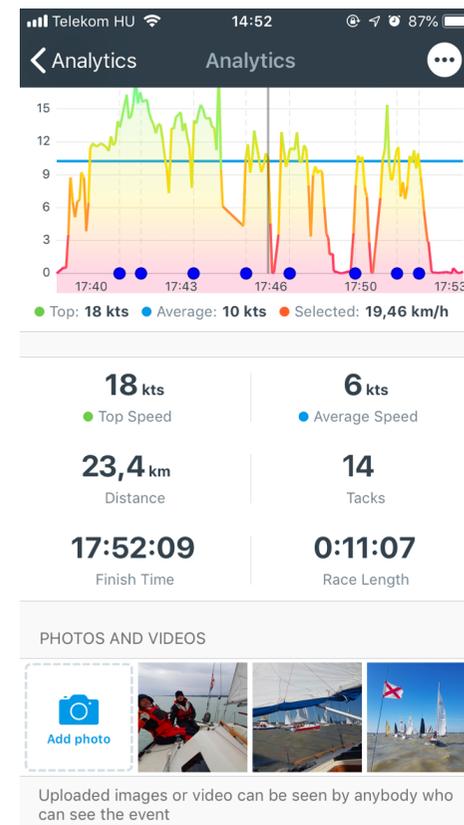

Invite your crew

You can invite all of your crew members, so they can enjoy the performance analytics too.

Upload photos and videos

You can upload your photos and videos to your tracking after the race.

Android users when using KWINDOO Tracking for racers: Android ver. 10 - 11 - 12

Battery optimisation is a key feature on new Androids but may be working against apps using GPS positioning on an extended basis, including KWINDOO Tracking for Sailors. The main idea here for us is that KWINDOO Tracking should not be limited by your hardware's operating system on its own decision.

Android is a fragmented world, this setting can be misleading on the various devices, so please always follow basic logic; No optimisation for KWINDOO.

The setting is mostly MANUAL and not automatic on install, please double check: allow KWINDOO work and be/let ALWAYS-ON when you are tracking.

Otherwise, your phone will switch off your KWINDOO tracking after a short time or at random. This is not a KWINDOO bug but a feature from your device to save battery power. Luckily you can take care of that.

So, here you will be switching OFF all optimisation for KWINDOO.

This setting is differently located and may even follow inverted logic on the various Android devices and Android versions; but is always somewhere under the POWER SAVING Menu.

Asus Settings – App & Notifications – Special app access – [Battery optimisation](#) – All apps - [KWINDOO Tracking: OFF](#)

HUAWEI Settings – App & Notifications – Apps – Settings – Special access – [Ignore battery optimization](#) – All apps - [KWINDOO Tracking: Allow – SAVE](#)
