Concept

We at Nordic-Holz value creativity. We value creativity both on the customer side but also on our company side as we specialise in creating bespoke log cabin solutions for our customers. Therefore, when examining this catalogue and looking at the products please keep in mind that these designs are mostly created to inspire and give ideas for your very own creations.

By creating bespoke cabins we can offer you a very personal building. YOUR building. Never be afraid to ask us if anything can be done. If it can be, we will do it. If it can not be done, we will patiently explain you why.

So be sure to take your sketchbook with you as you go through this myriad of designs and do not be afraid to draw up anything that comes to your mind because we want to make you the cabin that you had in mind. However, if you're not that creative, we also provide a range of products that are our stock products. These products are therefore cheaper and take less time to deliver. Some of these products are displayed in our catalogue too, but most of these products can be found in our mother-company Lasita Maja's catalogue.

Where to Begin?

As a whole it would be good to keep in mind that the construction of a summer cabin is similar to the construction of any smaller house, so to start with, the following things should be considered:

1. A suitable location
2. Financing for the project - both for the cabin and it's installation & the connecting services
3. Getting familiar with the building regulations in your area
4. Getting a planning or building consent from the relevant authorities
5. Planning the rooms
6. Choosing the architect/installer/buildier
7. The coordination of various projects
8. Composition of the order
9. Organising the construction
 - a. Construction of the concrete foundation/base
 - b. Preparation for the receival of the wooden parts of the house and suitable storage (must be kept off the ground and dry)
 - c. The erection of the wooden parts
 - d. A topping-out ceremony for good luck
 - e. Decorating and weatherproofing the wooden parts
 - f. Installation of the roof
 - g. Installation of doors and windows
 - h. Connecting Services (plumbing and sewage, electric and heating systems)
 - i. Finishing the outer decoration
 - j. Finishing the landscape and garden

When you're taking a look at the list – that is a lot of various and pretty hard things to consider. Don't let yourself be frightened by the fact. We have done this many times, it's not rocket science and we would be glad to help you out too!

How will I create a suitable house for my needs?

The most important question to create a house suitable to your needs is – „**What will this house be used for?**“

For example if the house is planned as additional living accomodation, then the design/construction needs to be based around this. If the building is going to be used for storage, then more emphasis should be placed on the floor to be able to support the weight of the stored items and maybe consider a different type of access for a wheelbarrow or even a car.

However, these different solutions also influence the final cost of your product, so keep in mind not to add anything that's really not necessary! For example there is no point to install living space quality windows to a house which is used as a garage and sparsely heated. When choosing the heat insulation package, a principle should be followed – it's better to insulate evenly. So it's really not very useful to insulate the floors when the ceilings are left uninsulated and vice versa.

Materials and product classes

We use nordic spruce (Picea abies) for our products which has proven its suitability for houses. Finger jointing of the material also allows us to manufacture constructions which are longer than the standard length of the log (6 metres). The available wall thicknesses are 44, 70 and 94 millimeters.

We divide our products into four product classes – 1+, 2+, 3+ and 5+. Each of our product classes has a different set of characteristics that goes for doors, windows and the construction of the house (insulation, cable canals etc) You can learn more about the product classes in the end part of this catalogue.

Component Set

Depending on the product group the components supplied may also change, but generally we offer you everything that is needed to erect the house with the only exception of insulation materials for the larger houses.

Ordering

To place an order we suggest you to turn to our retailers who will help you find the best solution for your needs. To answer your two most important questions : “How much would my concept house cost?” And “ could I see what it looks like?“, we have created a unique online software that creates a visual model of what you are looking for, therefore allowing you to find the answers to these questions. More detailed information about it can be found on our homepage.

The Barbados Mini 70 as the name says is a small addition to the Barbados product family. It gives just that tiny bit of extra room to people who are in need of it. It can be your little garden retreat or you can even use it for storing your extra stuff. Also possible to create that small office corner in the greens.

We offer a series of Estonian-produced premium windows with our range of products. We have four distinctive product classes and each of them has certain characteristics. You can learn more about our window classes by looking at the table below.

WINDOWS	1+	2+	3+	5+
1 Wood type	Pine	Pine	Pine	Pine (Painted)
2 Wall thickness	44;58;70;94	44;58;70;94	44;58;70;94	44;58;70;94
3 Laminated wood	+	+	+	+
4 Cross bars type	Screws	Screws	Clips	Clips
5 Pretreated	Remmers Induline	Remmers Induline	Remmers Induline	Remmers Induline
6 Finishing	++	++	++	Painted or stained
7 Glazing	Single	Double	Double	Double
8 Code	1+	2+	3+	5+
9 Selective glazing	-	++	++	+
10 Argon	-	++	++	+
11 U ⁱ -value>W/m ² K	5,6	2.8 (1.2*)	2.8 (1.2*)	1.1
12 Silicon gascet	+	+	+	2x
13 Water gutter	Aluminum	Aluminum	Aluminum	Aluminum
14 Opening	Inside	Inside	Inside	Inside
15 Opening system	N/A Tilt and turn	N/A Tilt and turn	D/K Tilt and turn	D/K Tilt and turn
16 Tender post for window -installation	from 70mm	from 70mm	from 70mm	from 70mm

- not included; + included; ++ on request;

As with windows we also have certain product classes for our doors. All four product classes have different characteristics and you can learn more about them by looking at the table below.

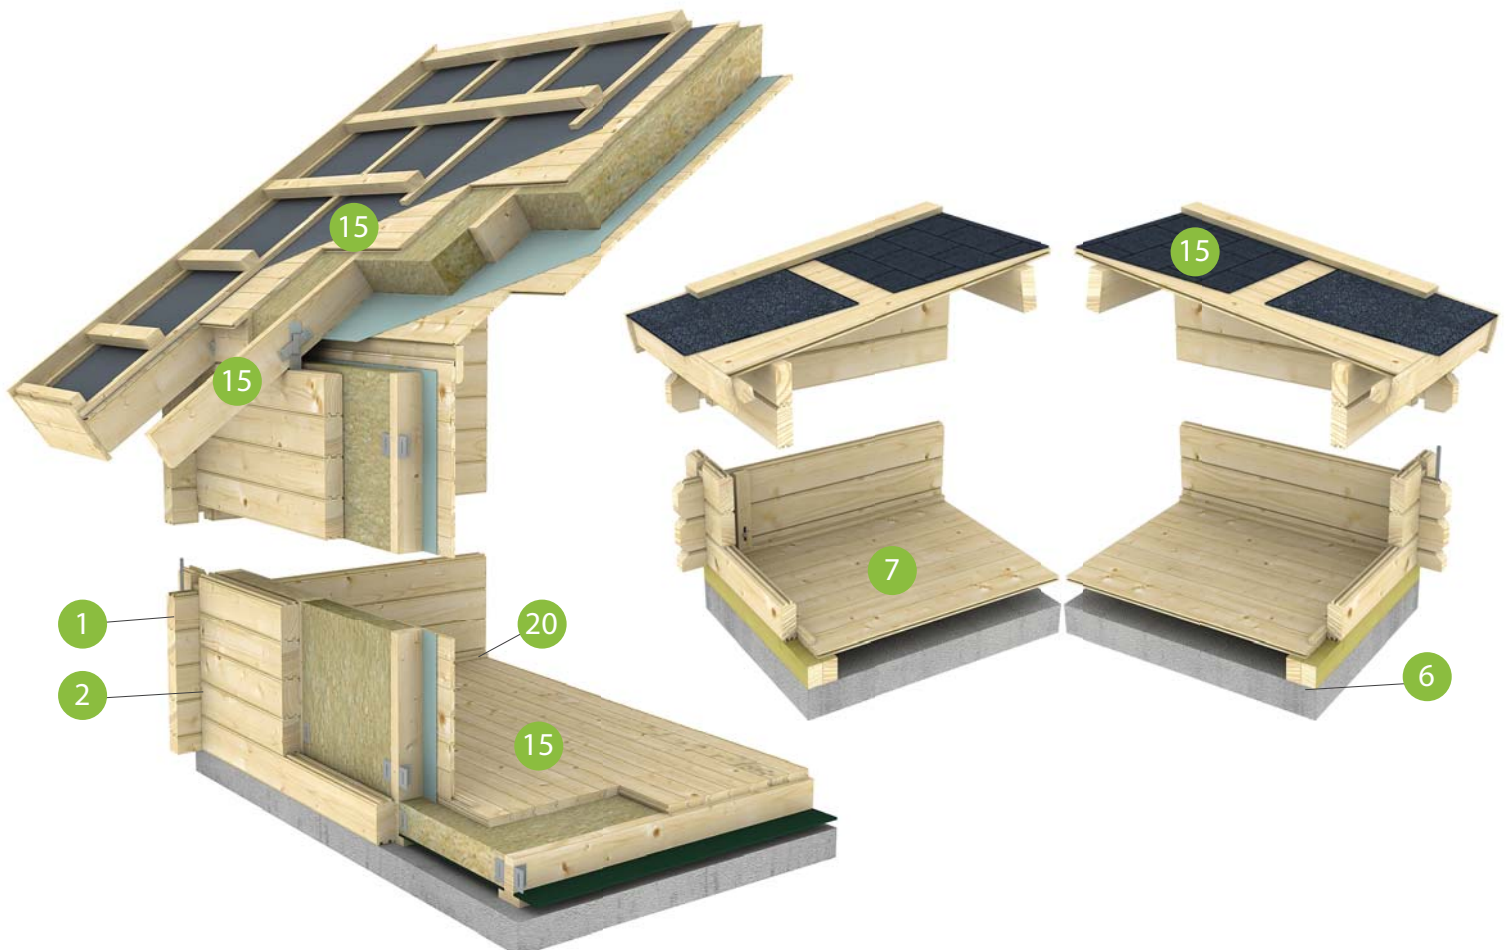

DOORS	1+	2+	3+	5+
1 Wood type	Pine	Pine	Pine	Pine (Painted)
2 Wall thickness	44;58;70;94	44;58;70;94	44;58;70;94	44;58;70;94
3 Laminated wood	+	+	+	+
4 Cross bars type	Screws	Screws	Clips	Clips
5 Pretreated	Remmers Induline	Remmers Induline	Remmers Induline	Remmers Induline
6 Finishing	-	-	-	Painted or stained
7 Glazing	Single	Double	Double	Double
8 Code	1+	2+	3+	5+
9 Selective glazing	-	++	++	+
10 Argon	-	++	++	+
11 U ⁱ -value>W/m ² K	5,6	2.8 (1.2*)	2.8 (1.2*)	1.1
12 Silicon gascet	+	+	+	2x
13 Door sill	Metal covered	Metal covered	Metal/Oak	Metal/Oak
14 Opening	Outside	Outside	Outside/Inside	Outside/Inside
15 Locking system	Cylinder	Cylinder	3 point lock	3 point lock
16 Tender post for door'-installation	from 70mm	from 70mm	from 70mm	from 70mm

- not included; + included; ++ on request;

Our products are available in four different wall thicknesses – 44, 58, 70 and 94. There's also an option to make double walled buildings such as the Barbados 3 44 Double (page 6 of this catalogue). To learn more about different construction options see the table below.

CONSTRUCTION	1+	2+	3+	5+
1 Wall thickness (mm)	44	58	70	94
2 Wind tight chalet'-connection	+	+	+	+
3 Wall insulation frame kit	-	-	++	++
4 Double tongue and groove	+	+	+	+
5 Impragnated terraceboard	+	+	+	+
6 Impragnated foundation	+	+	+	+
7 Floor 18mm	++	++	++	++
8 Floor 28mm	++	++	++	++
9 Floor insulation package	++	++	++	++
10 Floor fillets	+	+	+	+
11 Roof	18	18	18	18
12 Roof construction	Purlins/Rafters	Purlins/Rafters	Purlins/Rafters	Purlins/Rafters
13 Roof insulation package	++	++	++	++
