

## RECYCLING INSTRUCTIONS

CEWOOD wood wool cement panels are composite panels made of wood and cement. While the recycling options for our panels may vary depending on your location and the specific composition of the panels, here are some general guidelines:

- 1. Assess the condition:** Check the condition of the panels. They may be suitable for recycling or reusing if they are intact, clean, and free from contaminants like adhesives and foam. Damaged or contaminated panels may not be suitable for reuse and may need to be disposed of through other means.
- 2. Separate materials:** If the wood wool panels contain additional materials such as metal fasteners, mineral wool, or plastic components, separate these before recycling. Recycling facilities often prefer homogeneous materials for ease of processing.
- 3. Contact local recycling facilities:** Research local recycling centres or facilities that accept composite materials, such as wood and cement composites. Check if they specifically accept wood wool cement panels or similar composite products.
- 4. Consult with CEWOOD:** Reach out to us about the recommended recycling methods or other specific recycling programs available.
- 5. Follow recycling guidelines:** If a recycling facility accepts wood wool cement panels, follow their guidelines for preparing them. They may have specific requirements regarding the size, packaging, or any additional processing steps. Adhere to these guidelines to ensure proper recycling.
- 6. Transport and delivery:** Arrange transport to deliver the CEWOOD panels to the designated recycling facility. Consider using a vehicle suitable for transporting large or bulky items.
- 7. Explore alternative options:** If recycling options for wood wool panels are limited or unavailable, consider alternative options such as repurposing or upcycling. For example, the panels can be used for outdoor projects, garden structures, soil conditioning, weed control, or other creative applications.

ⓘ Always check with local recycling centres, waste management authorities, or CEWOOD for specific guidelines and recommendations on recycling wood wool panels. Recycling options may vary depending on regional regulations and available facilities.
