

Europe, Innovation and Aviation – Are we keeping up?

21-22 March 2017

PROGRAMME

At The Hotel, Boulevard de Waterloo 38, 1000 Brussels

Moderated by Paul Sillers, writer and aviation journalist

The European Union and its citizens are facing major global and internal challenges, with the need to reduce CO2 emissions and noise levels from aircraft being one of them. Aeronautics is one of Europe's sectors of excellence, built on strong industrial performance, innovative technologies and skilled teams, and enjoying global recognition. The European Union has a vision for research and innovation that translates into sound policies to develop innovative, green technologies to improve the environment. In Clean Sky, the private and public sector have joined forces to secure the best results. As the first Clean Sky programme draws to a close, it is time to reach conclusions on the first results and discuss future steps.
