1 Introduction

The purpose of this document is to provide guidance to the use of Electronic Account Reporting messages. This description is related to the ISO 20022 XML-based description, which will replace the proprietary electronic account reporting standards used by banks operating in Estonia.

There are three (3) different account reporting messages:

Name of message	Corresponding ISO 20022 message	Usage
Account Statement	camt.053.001.02	<ul style="list-style-type: none">Is used to report account booked transactions and balances of previous period.Includes information on booked transactions on account together with opening and closing balance of reporting period
Account Report	camt.052.001.02	<ul style="list-style-type: none">Is used to report only intraday transactions.Is used to report only intraday account balanceIs used to report both, intraday transactions and balance.
Debit Credit Notification	camt.054.001.02	<ul style="list-style-type: none">Is used to report transaction information.Does not involve balance information

All messages are sent by the customers bank to an account owner or to a party authorised by the account owner to receive the message.

Message can contain reports for more than one account and currency. It provides information for cash management and/or reconciliation.

It can include underlying details of transactions (except Account report if only balance is reported) that have been included in the entry. All messages are exchanged as defined between the account servicer and the account owner.

Depending on services and schedule agreed between banks and their customers, reports may be generated and exchanged accordingly, or generated on the request of customer.

The content of this document will be updated during the SEPA consultation period according to the input from Estonian SEPA forum.

Banks will offer XML account reporting to their customers from _____.

These Implementation Guidelines have been developed by the Estonian banks together with the Estonian Banking Association and Estonian Central Bank.

2 Message content

Each message consists of two mandatory building blocks:

- Group Header
- Report content
 - Named as *Statement* in case of Account Statement
 - Named as *Report* in case of Account Report
 - Named as *Notification* in case of Debit Credit Notification

Following table gives overview of main information blocks and their usage in different messages

Main information block	Account statement camt.053.001.02	Account Report camt.052.001.02	Debit Notification camt.054.001.02	
Group Header	Required, only occurs once Includes the message identifier, the date and time of message generation and message pagination information.			
Balance	Always present. at least opening booked balance (OPBD) and closed booked balance (CLBD) of reporting period is reported. Reported booked balances are final balances	Present, if used for reporting intraday balance. Depends on agreement between Customer and account servicer. When used, then at least interim available balance (ITAV) and interim booked balance (ITBD), effective on reporting time, are reported	N/A	

Entry	Always present. Previous period	Present, if used for reporting intraday transactions. Depends on agreement between Customer and account servicer.	Always present

2.1 Entry structure

Transaction information on account statement can be reported on three (3) different levels:

- Entry (Ntry)
- Transaction Details (Ntry/NtryDtls/TxDtls)
- Remittance Information (Ntry/NtryDtls/TxDtls/RmtInf).

Following table gives overview of information levels and connections between different messages

Payment initiation (pain.001.001.03)	Account statement (camt.053.001.02)	Account report (camt.052.001.02)	Debit Credit Notification (camt.054.001.02)
2.0 PaymentInformation <PmtInf>	2.76 Entry <Ntry>	2.76 Entry <Ntry>	2.56 Entry <Ntry>
2.27 CreditTransferTransactionInformation <CdtTrfTxInf>	2.142 TransactionDetails <TxDtls>	2.142 TransactionDetails <TxDtls>	2.122 TransactionDetails <TxDtls>
2.98 RemittanceInformation <RmtInf>	2.234 RemittanceInformation <RmtInf>	2.234 RemittanceInformation <RmtInf>	2.214 RemittanceInformation <RmtInf>

3 Message structure

Column Usage for Implementation provides information how the ISO 20022 is implemented by the banks in Estonia:

- Yellow field (with regular text) indicates an optional field
- Yellow field with **Bold** text indicates a mandatory field

Message structure description shall be read in conjunction with ISO 20022 message specification.

3.1 A. Group Header (same for all messages)

- Required, only occurs once
- Includes the message identifier and the date and time of account statement generation
- Corresponds to the Incoming reference payments batch record data
