

ÜHEREALISED PISTED

Tiia Artla

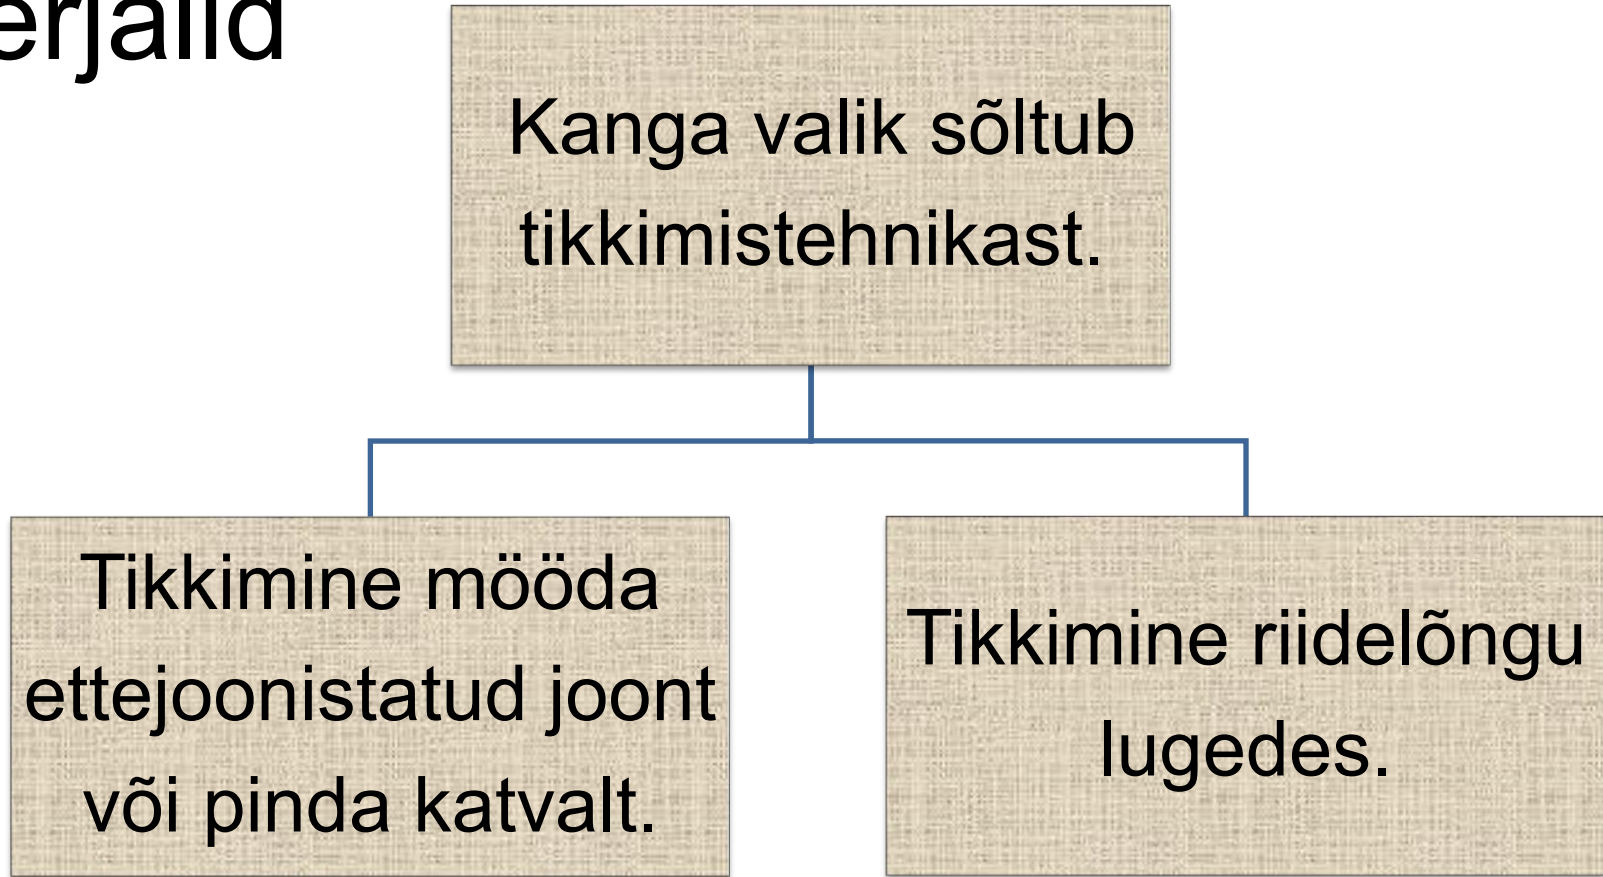

Töövahendid

- Nõelad
 - Sukanõel: jämedakoelisele või paksule kangale.
 - Tõmbi otsaga nõel: hõredale kangale.
 - Terava otsaga nõel: tihedamatele kangastele.
 - Väga peenike nõel: helmestega tikkimiseks.

Tikkimisnõel on pikem, terava otsaga ning suurema silmaga.

Materjalid

Tikkimisniidid ja lõngad

- **Mulinee** – puuvillane, kerge läikega, kuueniidiline lõng.

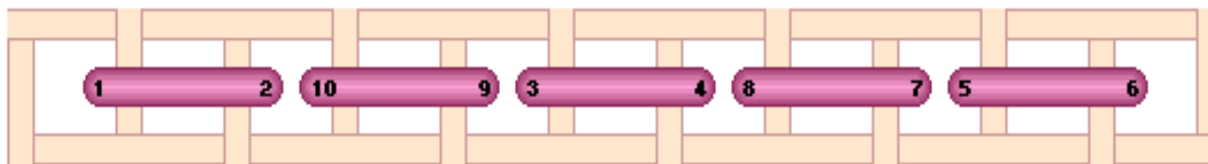

- Peenvillane-, villane-, jäme vaibalõng.

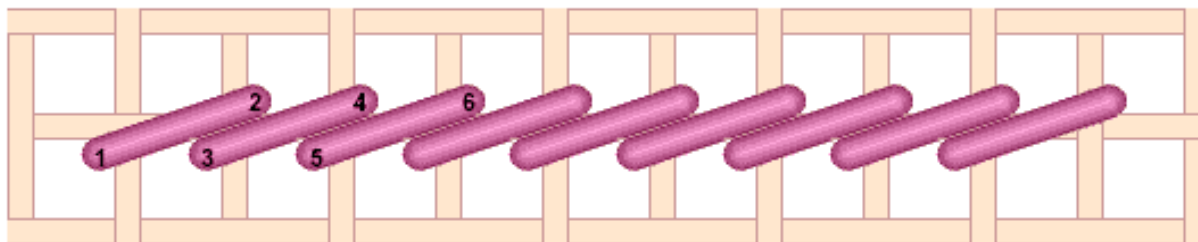

Kaunistuspisted jagatakse
tikkimisviiside alusel gruppideks:

- Üherealised pisted
- Kaherealised pisted
- Vaibapisted
- Sõlmpisted

- **Üherealised pisted**- on sellised pisted, mida tikitakse mööda üht joont nõ ühes lõngavahes

- **Kaherealised pisted**- on sellised pisted, kus tikimise käigus nõel liigub mööda kaht joont (neil on ka kõrgus)

Üherealised pisted

- Eelpiste
- Tikkpiste
- Liivapiste
- Järelpiste
- Varspiste
- Ahelpiste
- Kastpiste
- Linnusilmapist

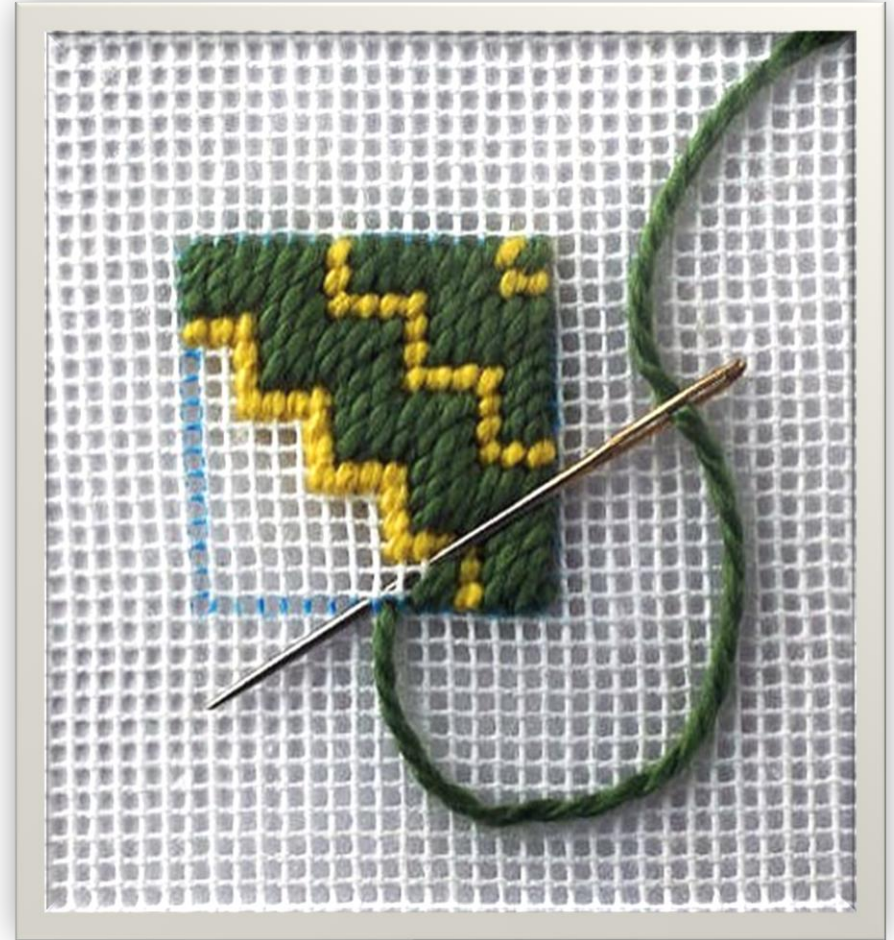

Kaherealised pisted

- Üleloomispiste
- Ristikpiste
- Aedpiste
- Põlvikpiste
- Püvisilmpiste
- Sämpipiste
- Võrkpisted

Vaibapisted

- Ristpiste
- Kaksikristpiste
- Riisipiste
- Keelimpiste
- Narmaspisted
- Gobeläänpisted

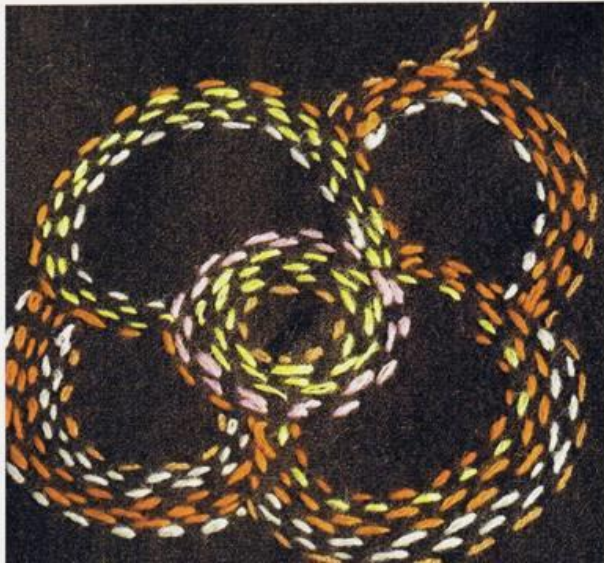

Sõimpisted

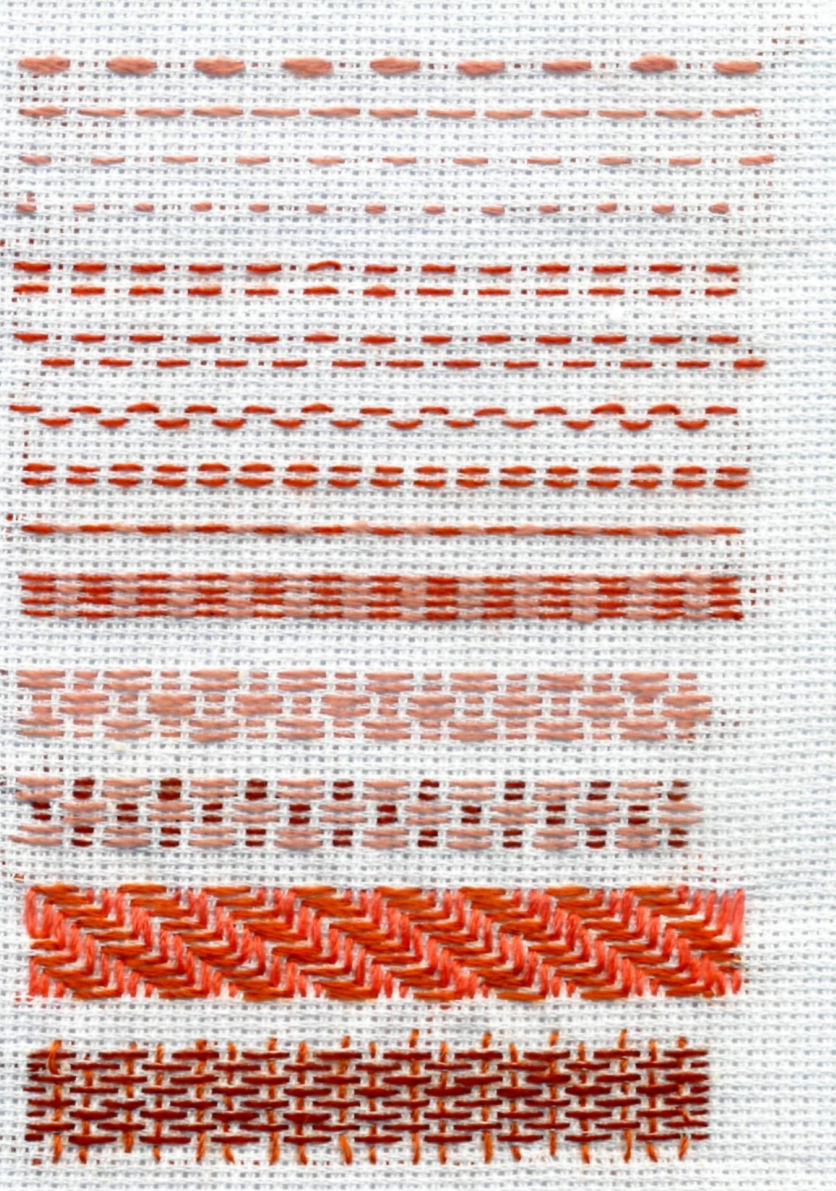

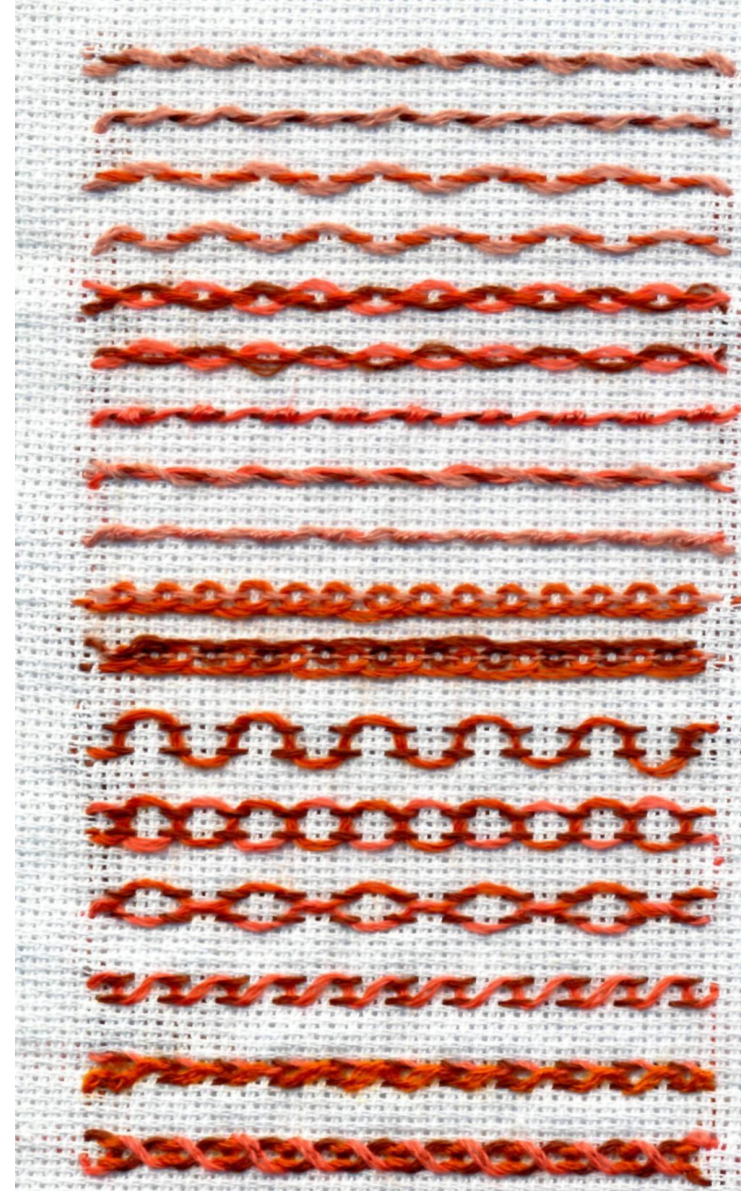

- Nöörsõimpiste
- Ahelsõimpiste
- Sämpsõimpiste
- Keerdsõimpiste
- Spiraalsõimpiste
- jne ...

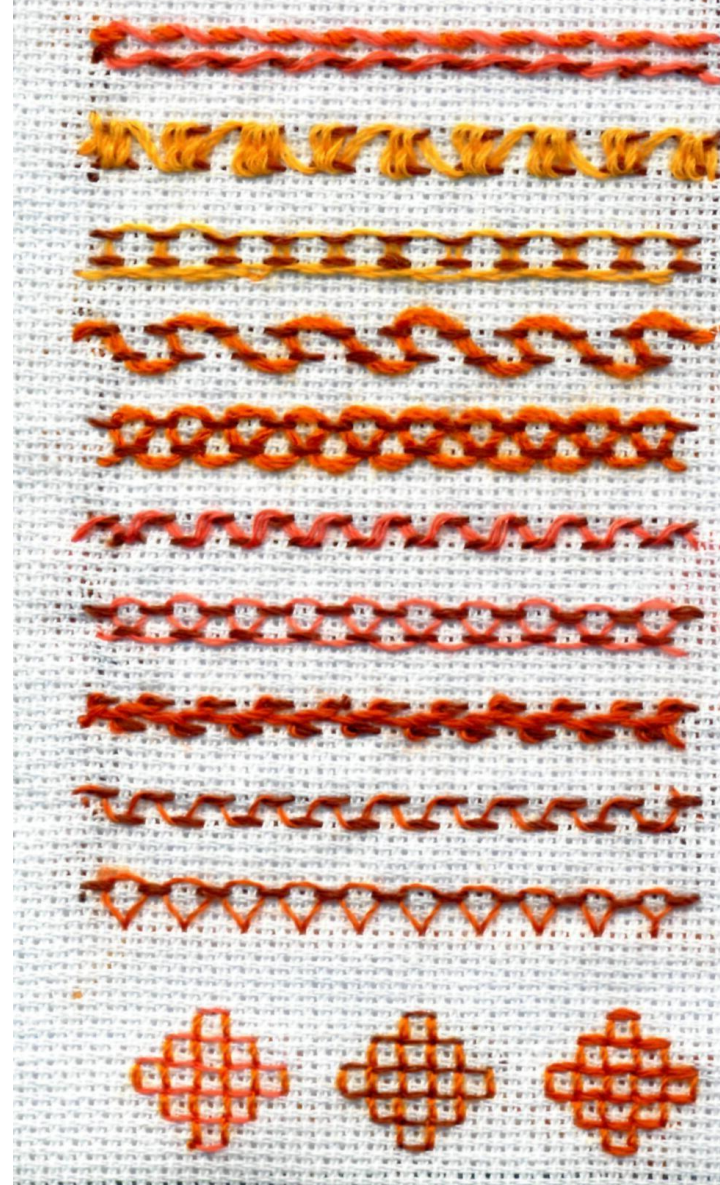

Eelpisted

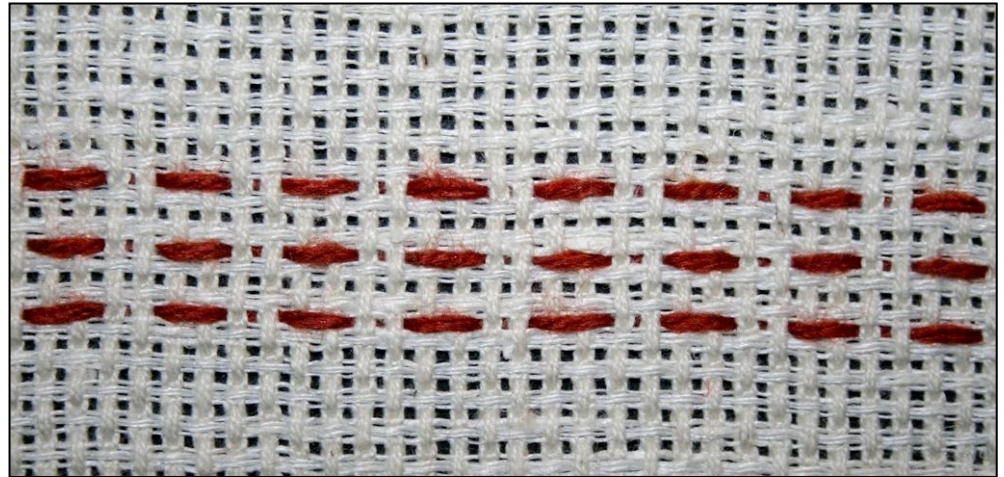

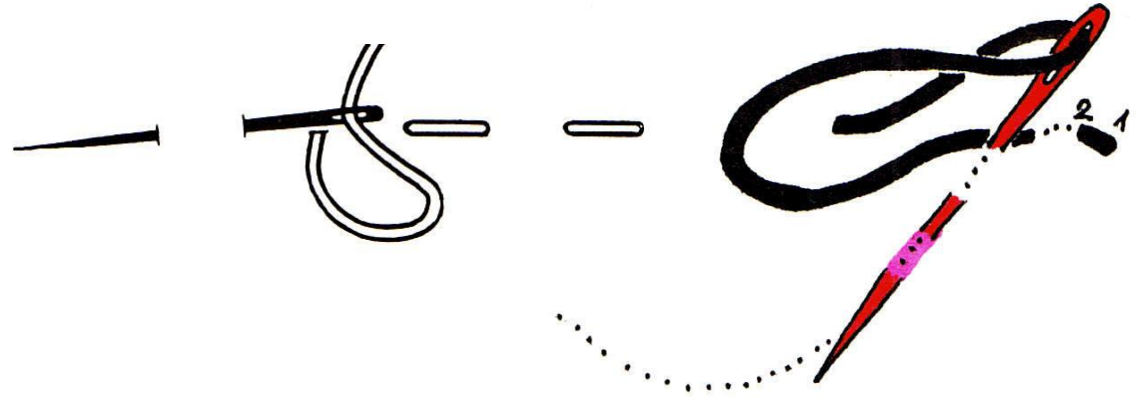

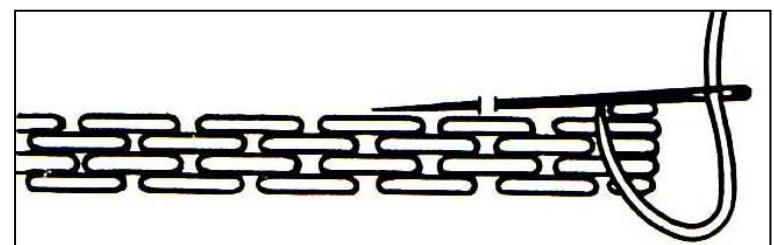

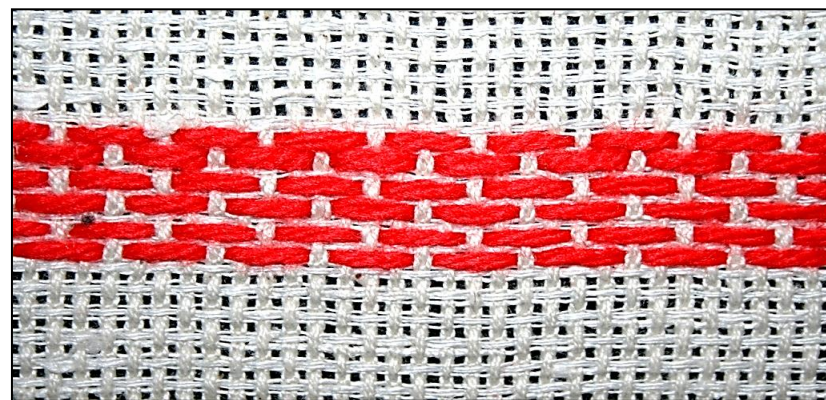

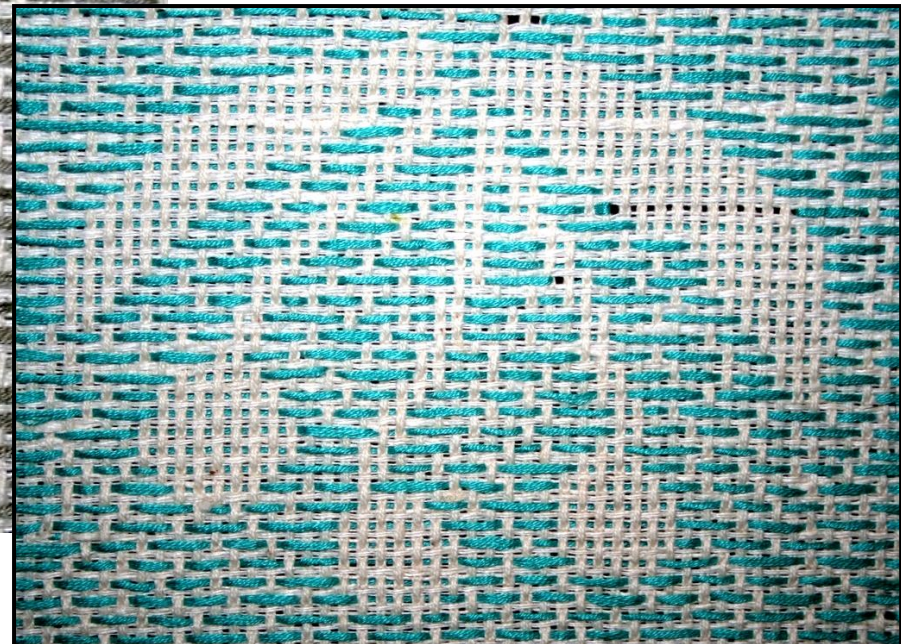

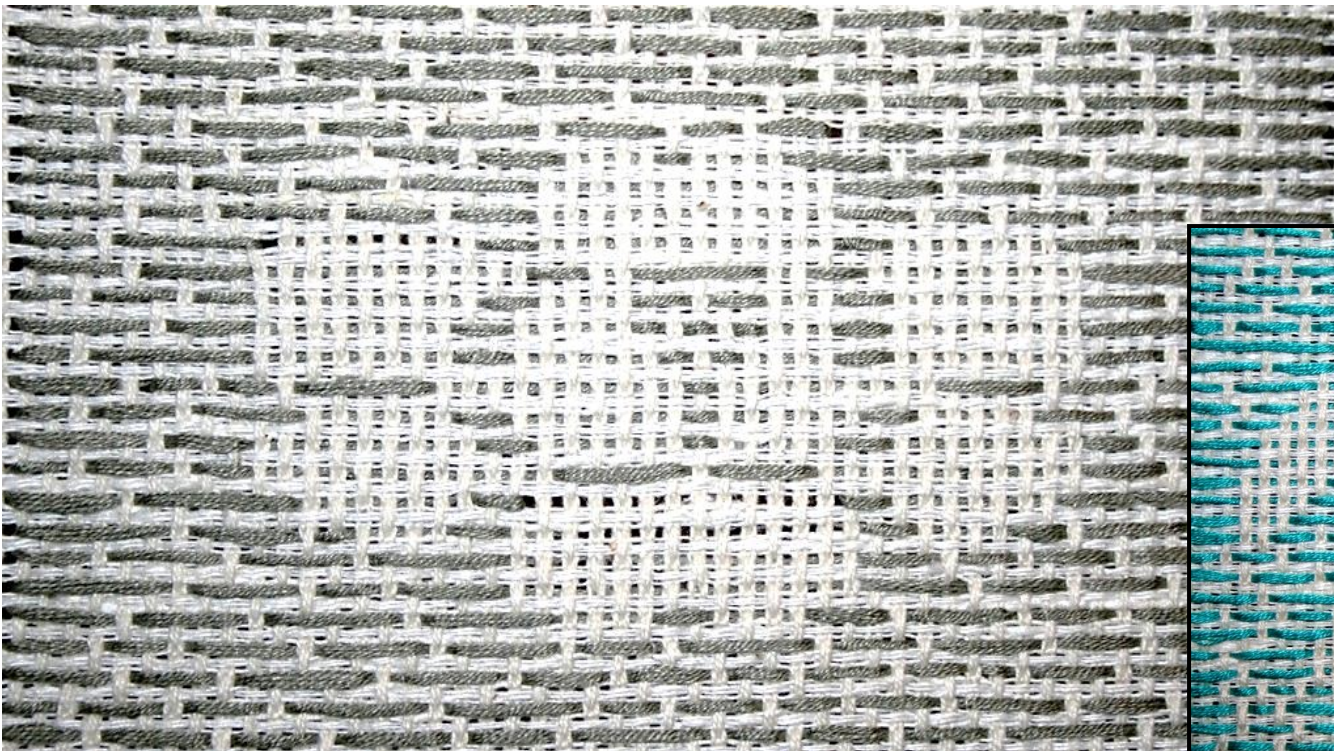

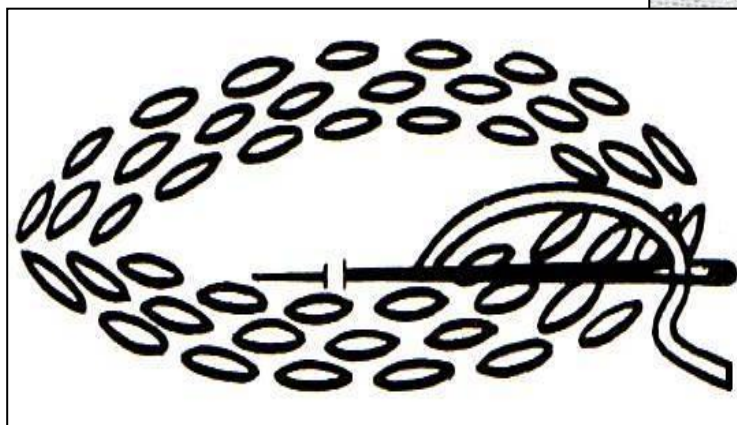

Eelpiste = põhipiste

- Tikitakse paremalt vasakule või enda poole.
- Tikkimisel jäetakse riie nõela alla piste pikkuse ulatuses ja nõelale võetakse pistevahe.

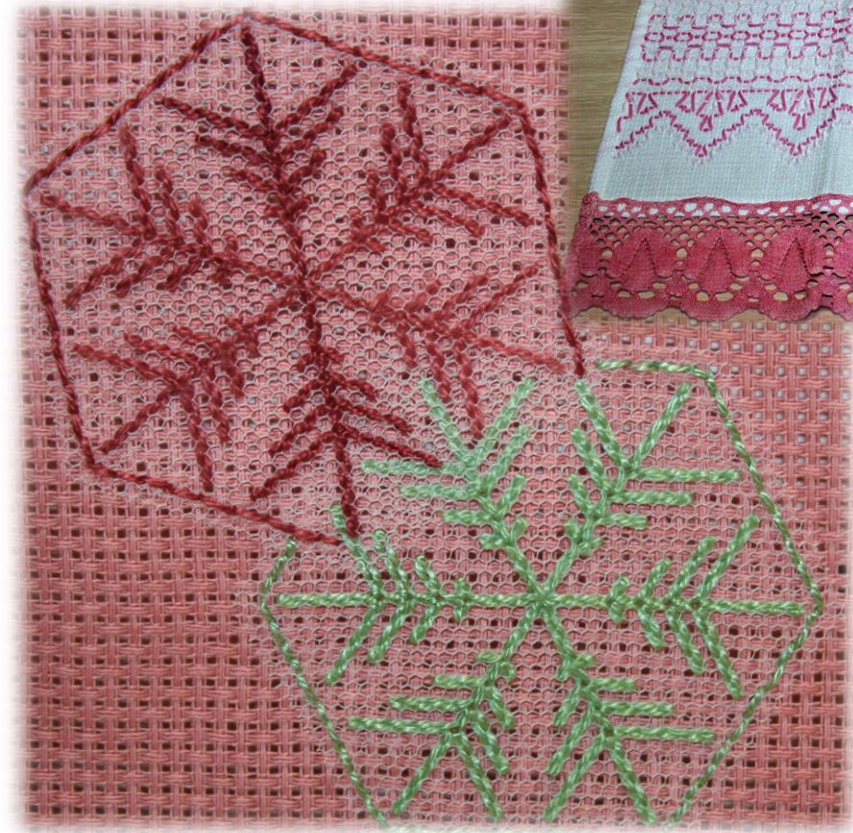

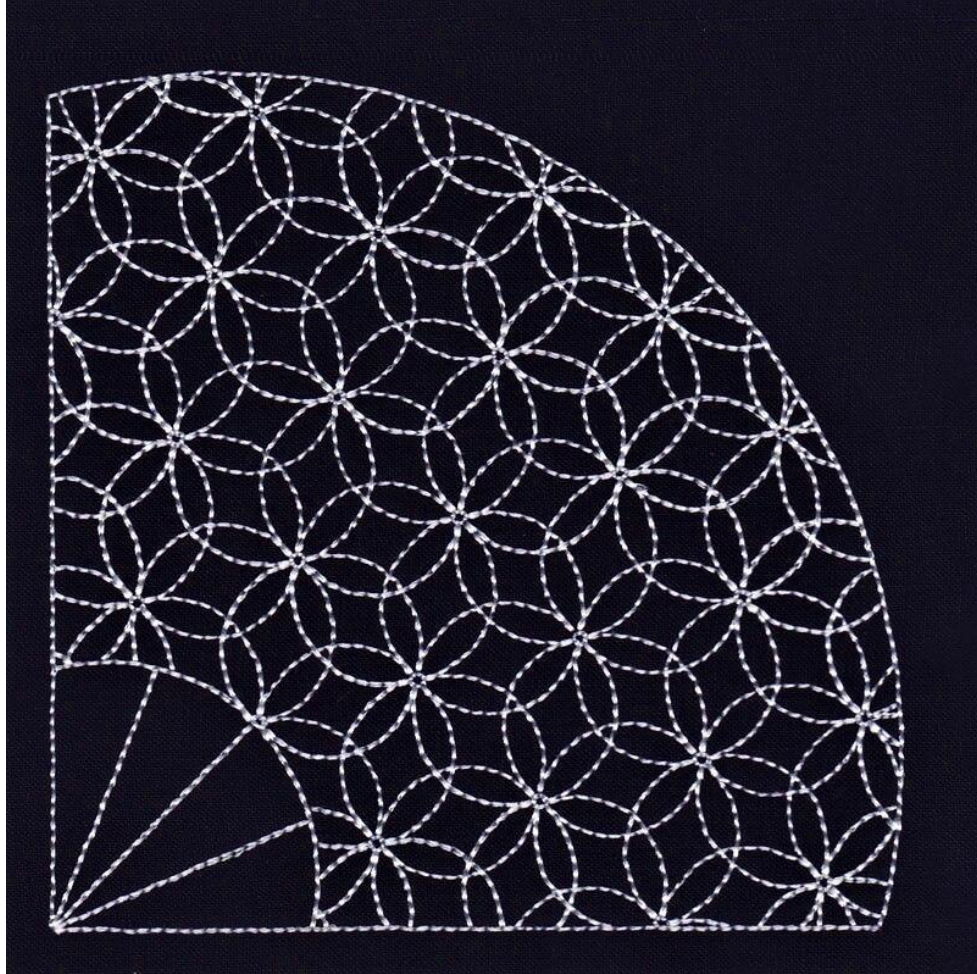

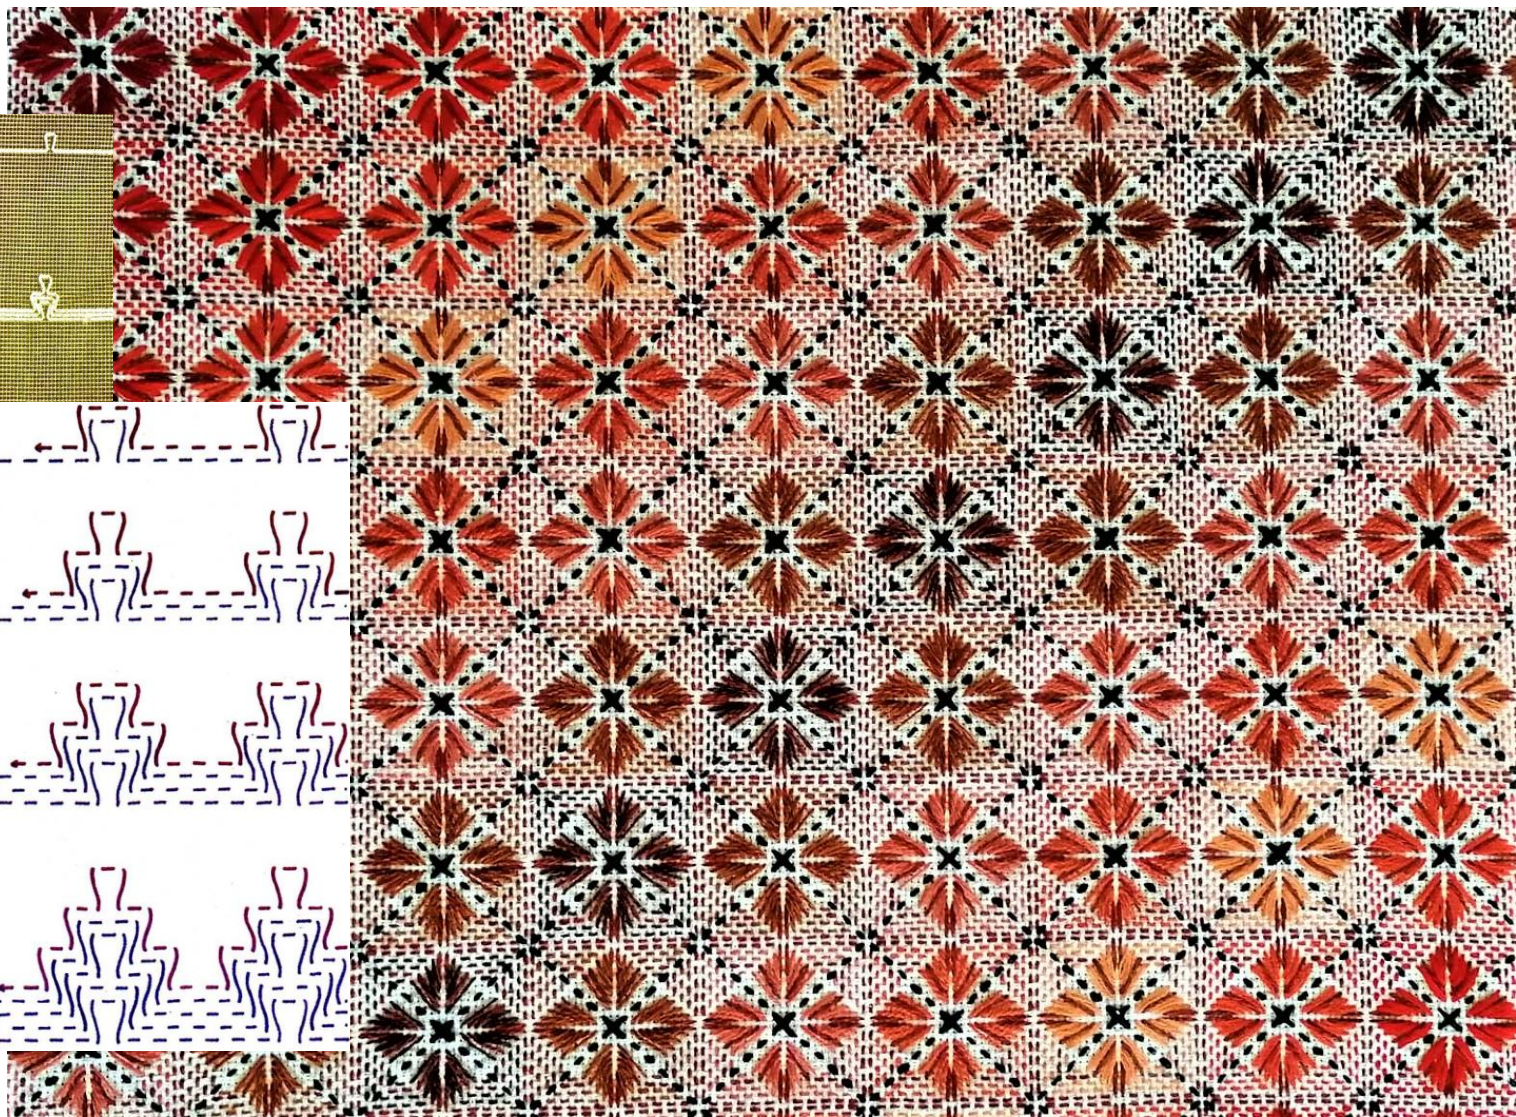

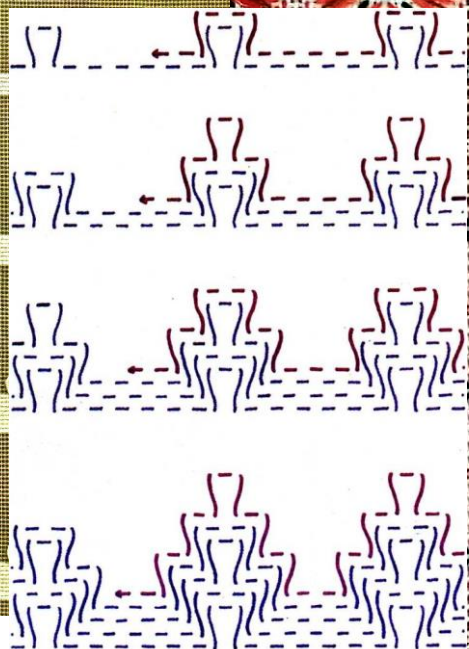

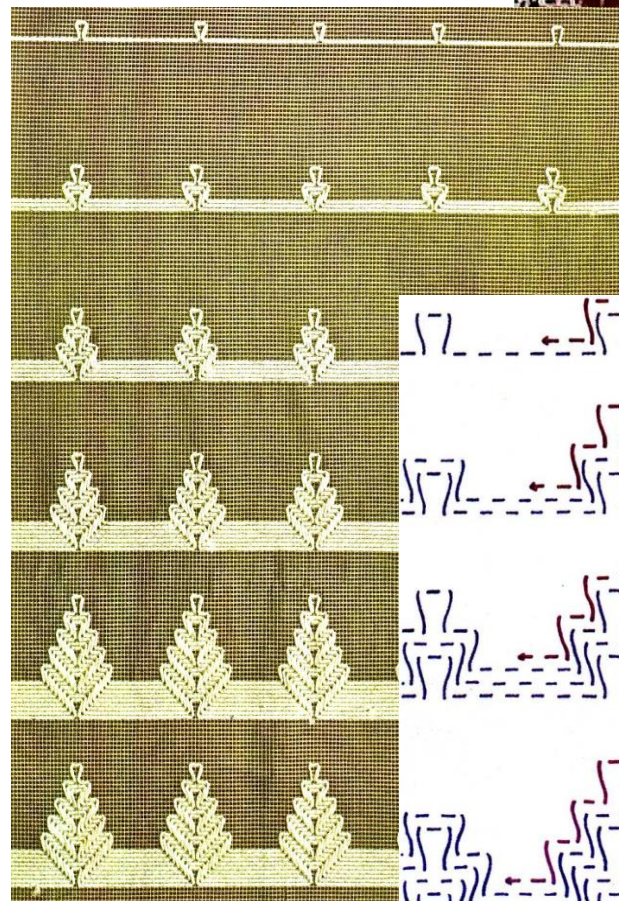

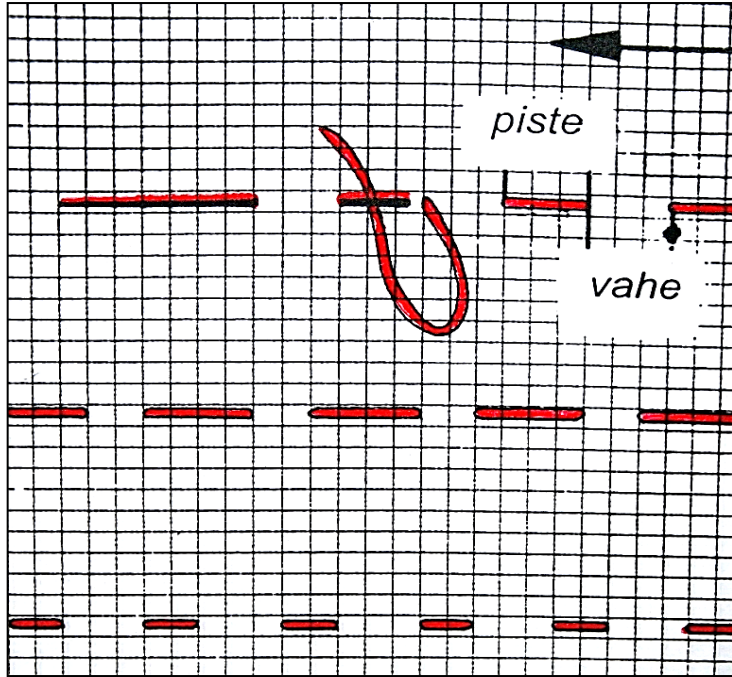

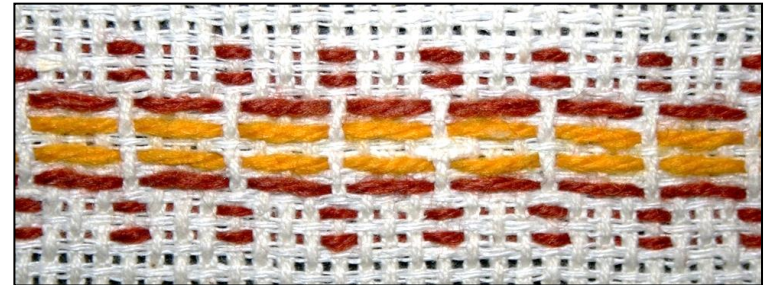

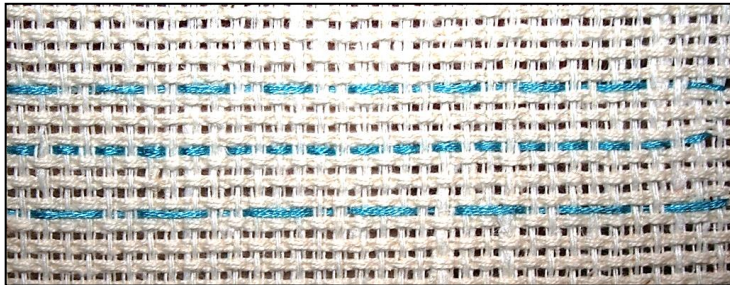

Pisted ja pistevahed võivad olla kas ühe pikkused või pisted pistevahedest pikemad või lühemad

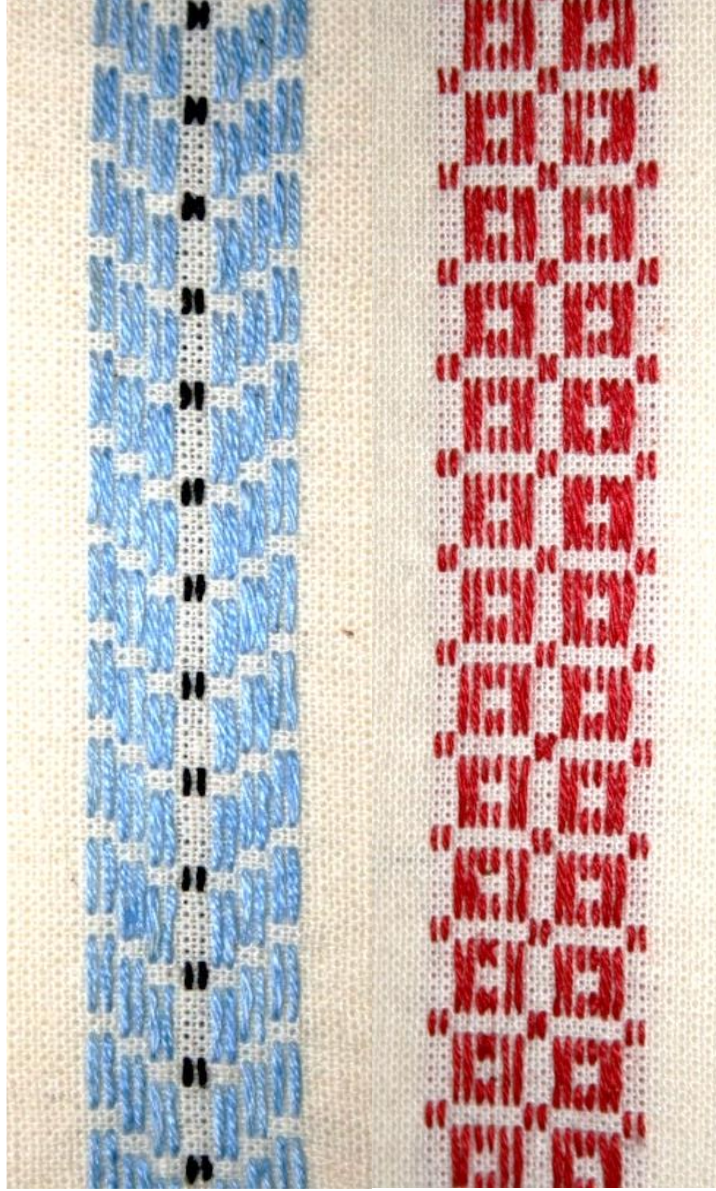

a) piste ja pistevahe ühepikkused

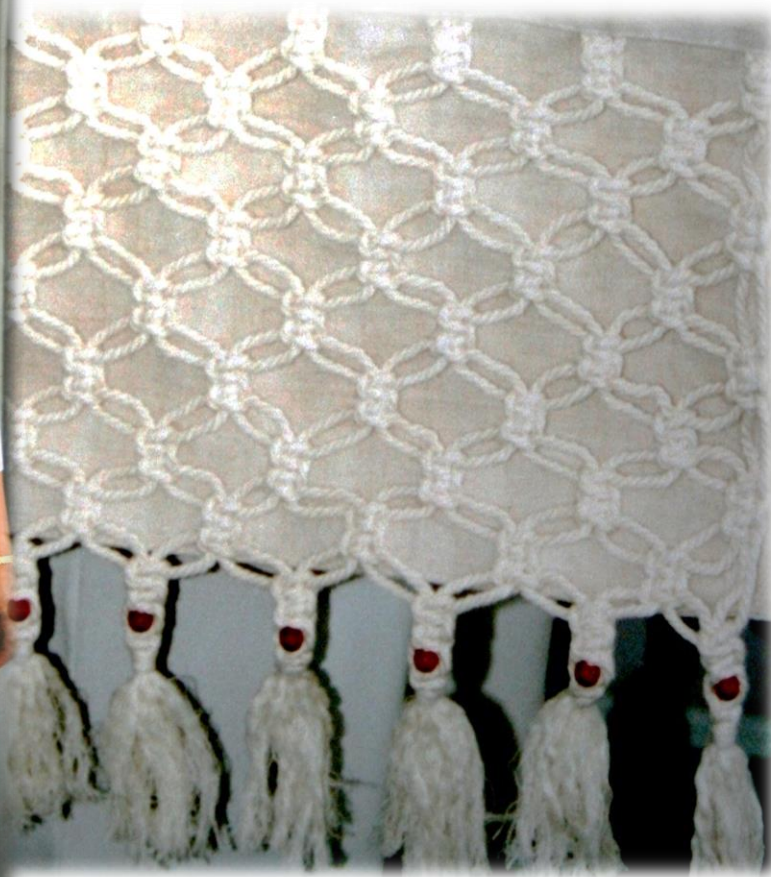

b) piste pistevahest pikem

c) piste pistevahest lühem

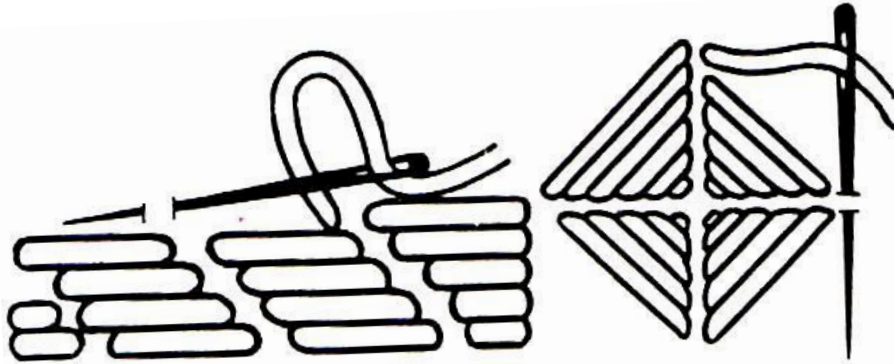

Eelpisteid võib ka nõ rühmitada ehk kindla mustrikorra järgi
tikkida

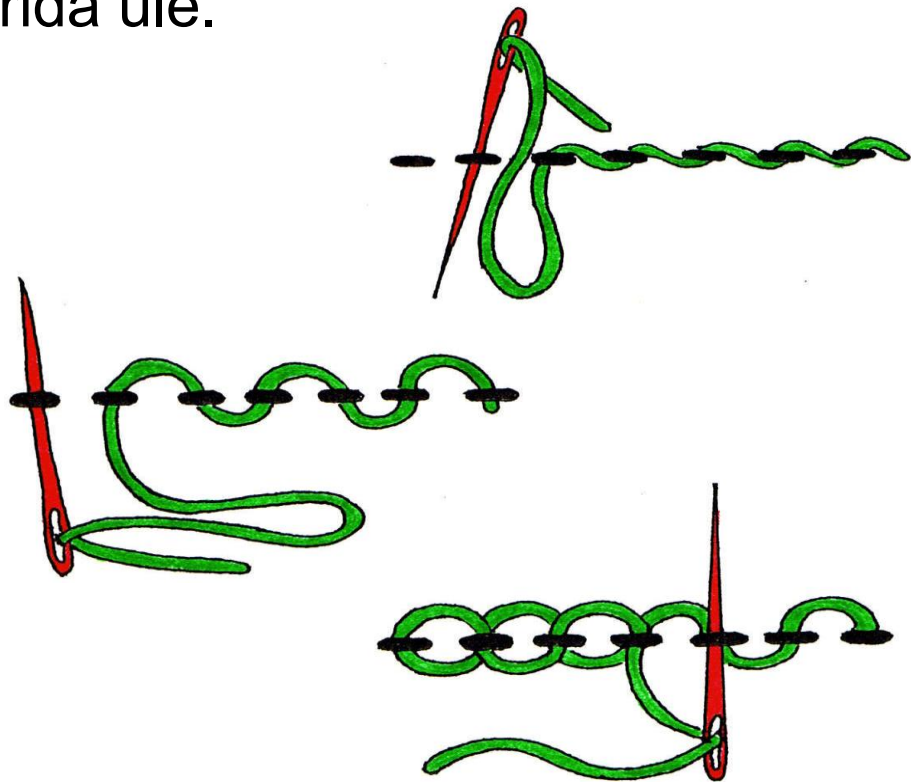

Roosimine

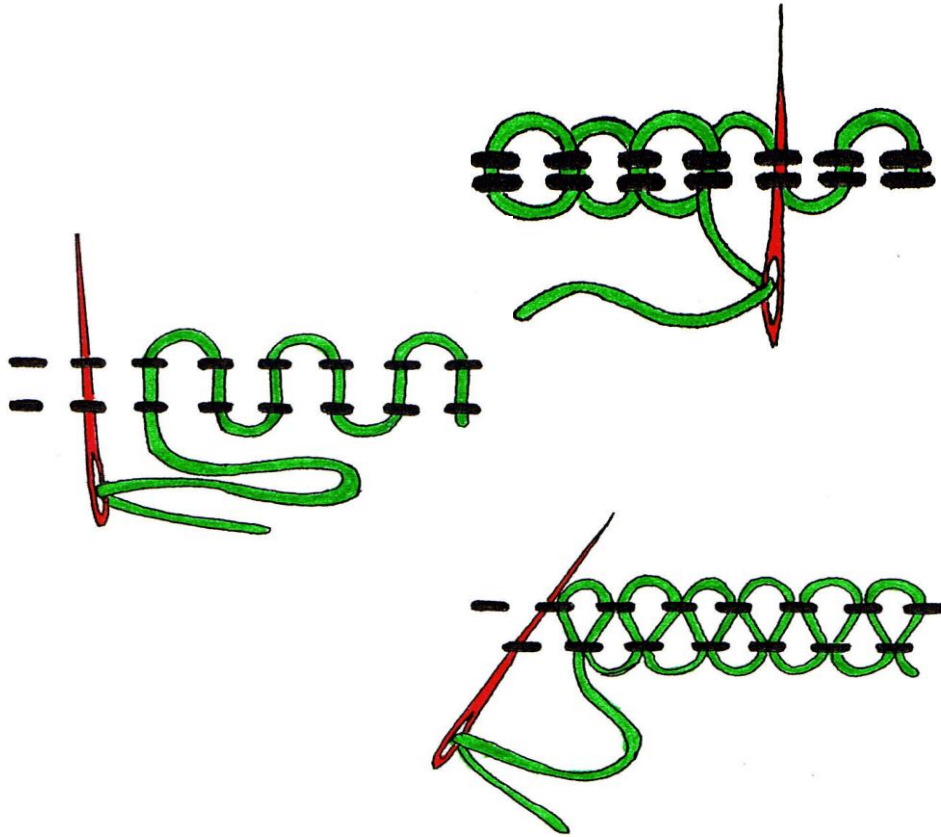

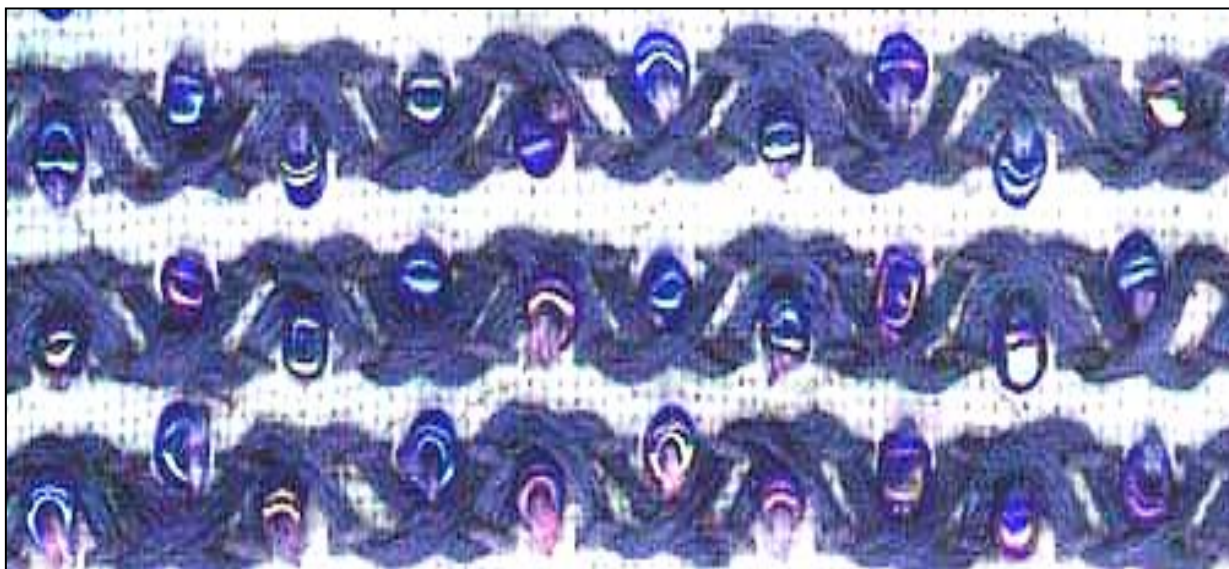

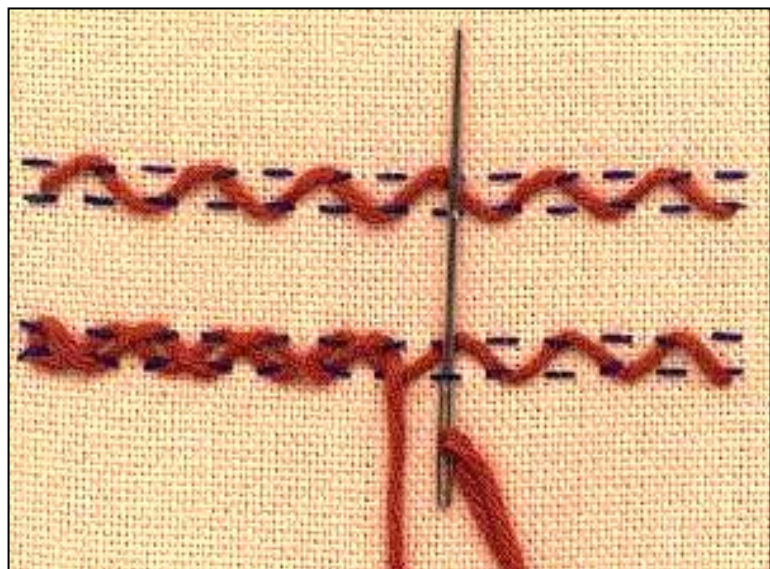

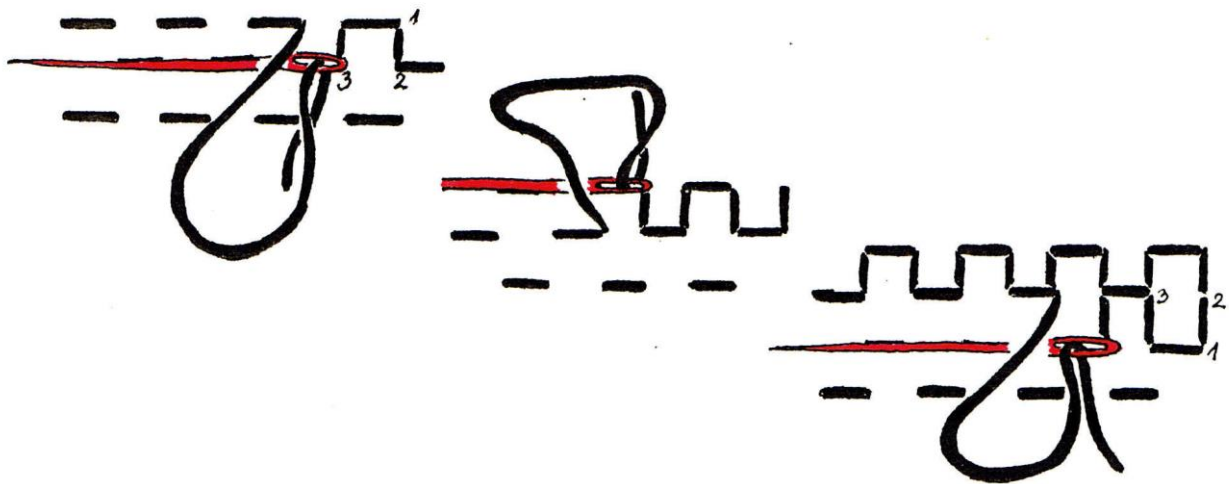

Ülepõimitud eelpisted = tuletatud pisted

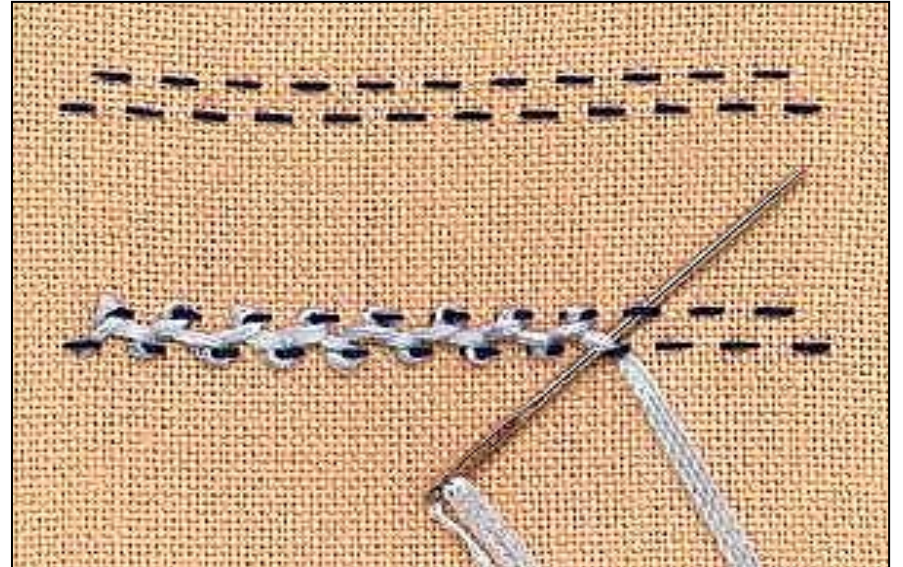

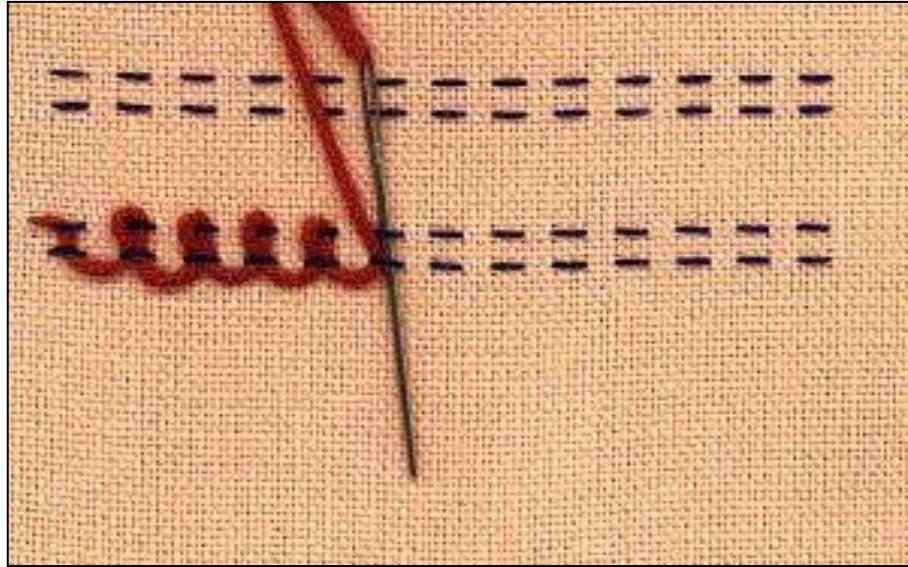

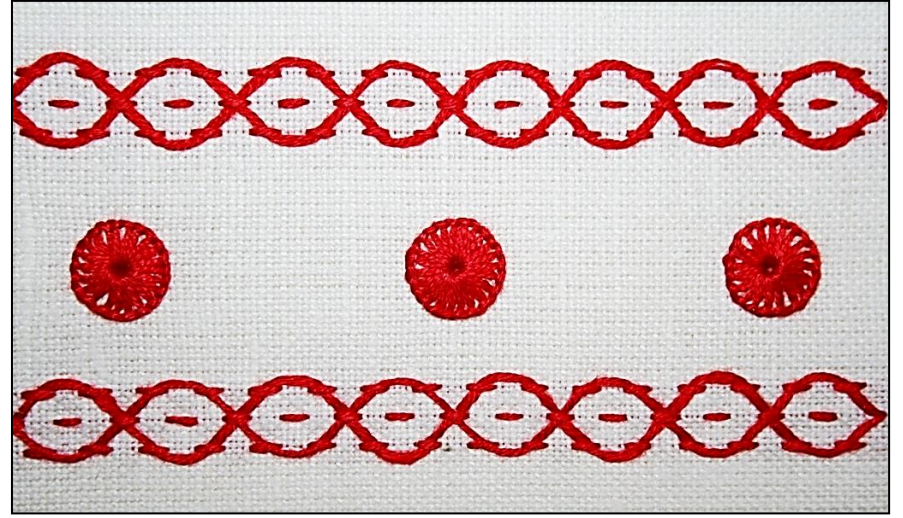

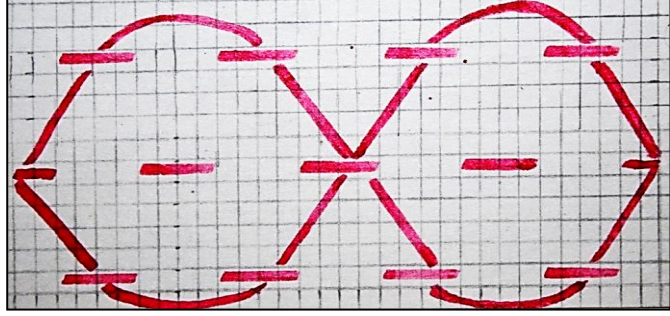

- Tiki ühtlane eelpisterida.
- Võta tõmbi-otsaga nõel, pane sellele taha teist värvi lõng ja põimi pisterida üle.

Põimida võib ka läbi mitme paralleelse eelpisterea erijämeduste lõngadega – tulemuseks sügavamalt looklevad ja ilmekamad põimingud.

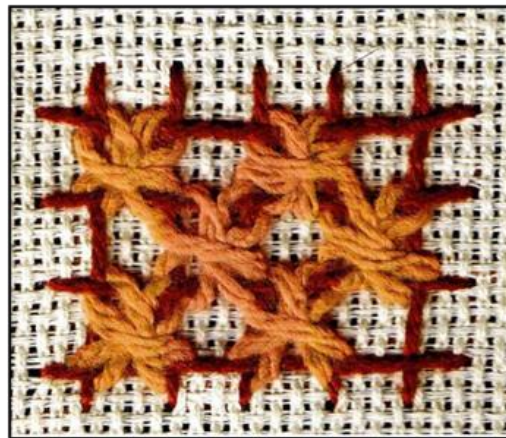

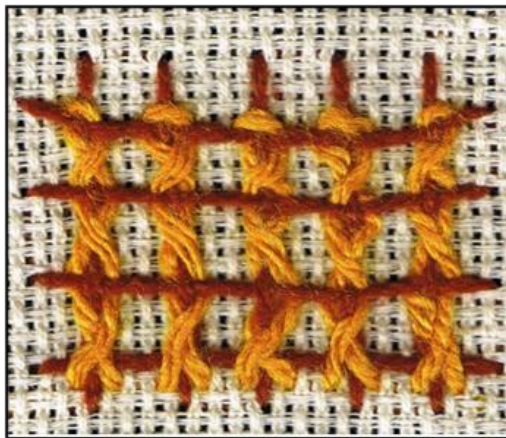

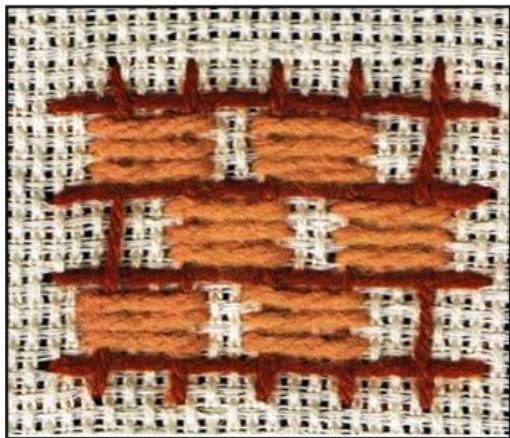

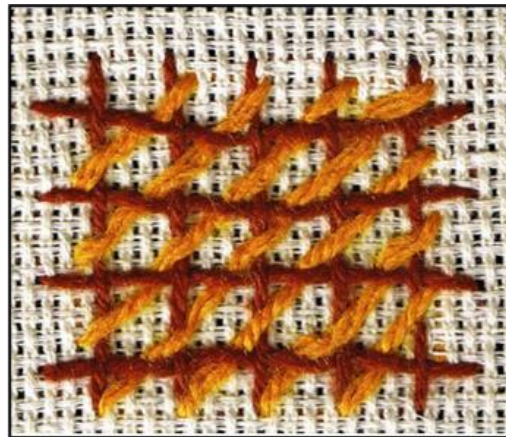

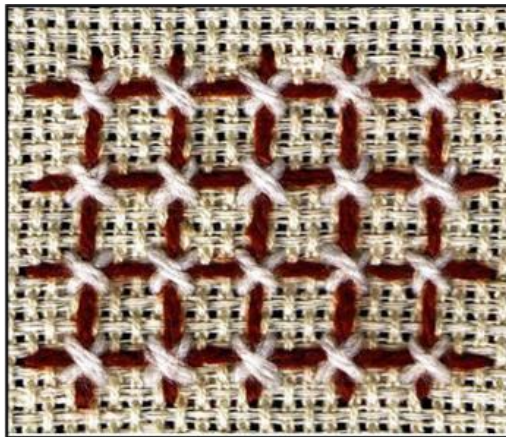

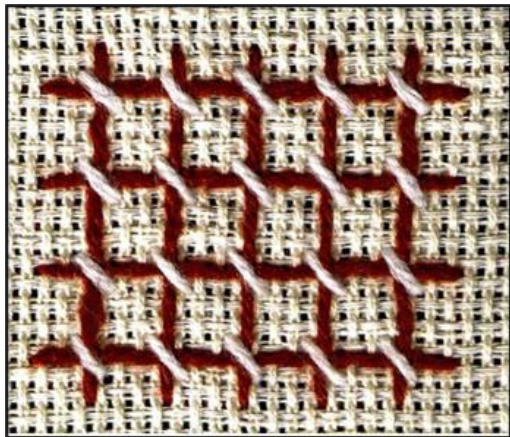

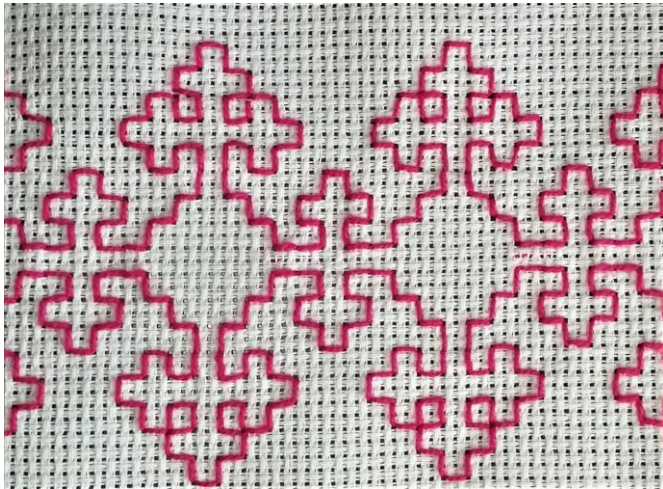

Eelpisted → vörkpisted

Võrkpisted

Kastpisted

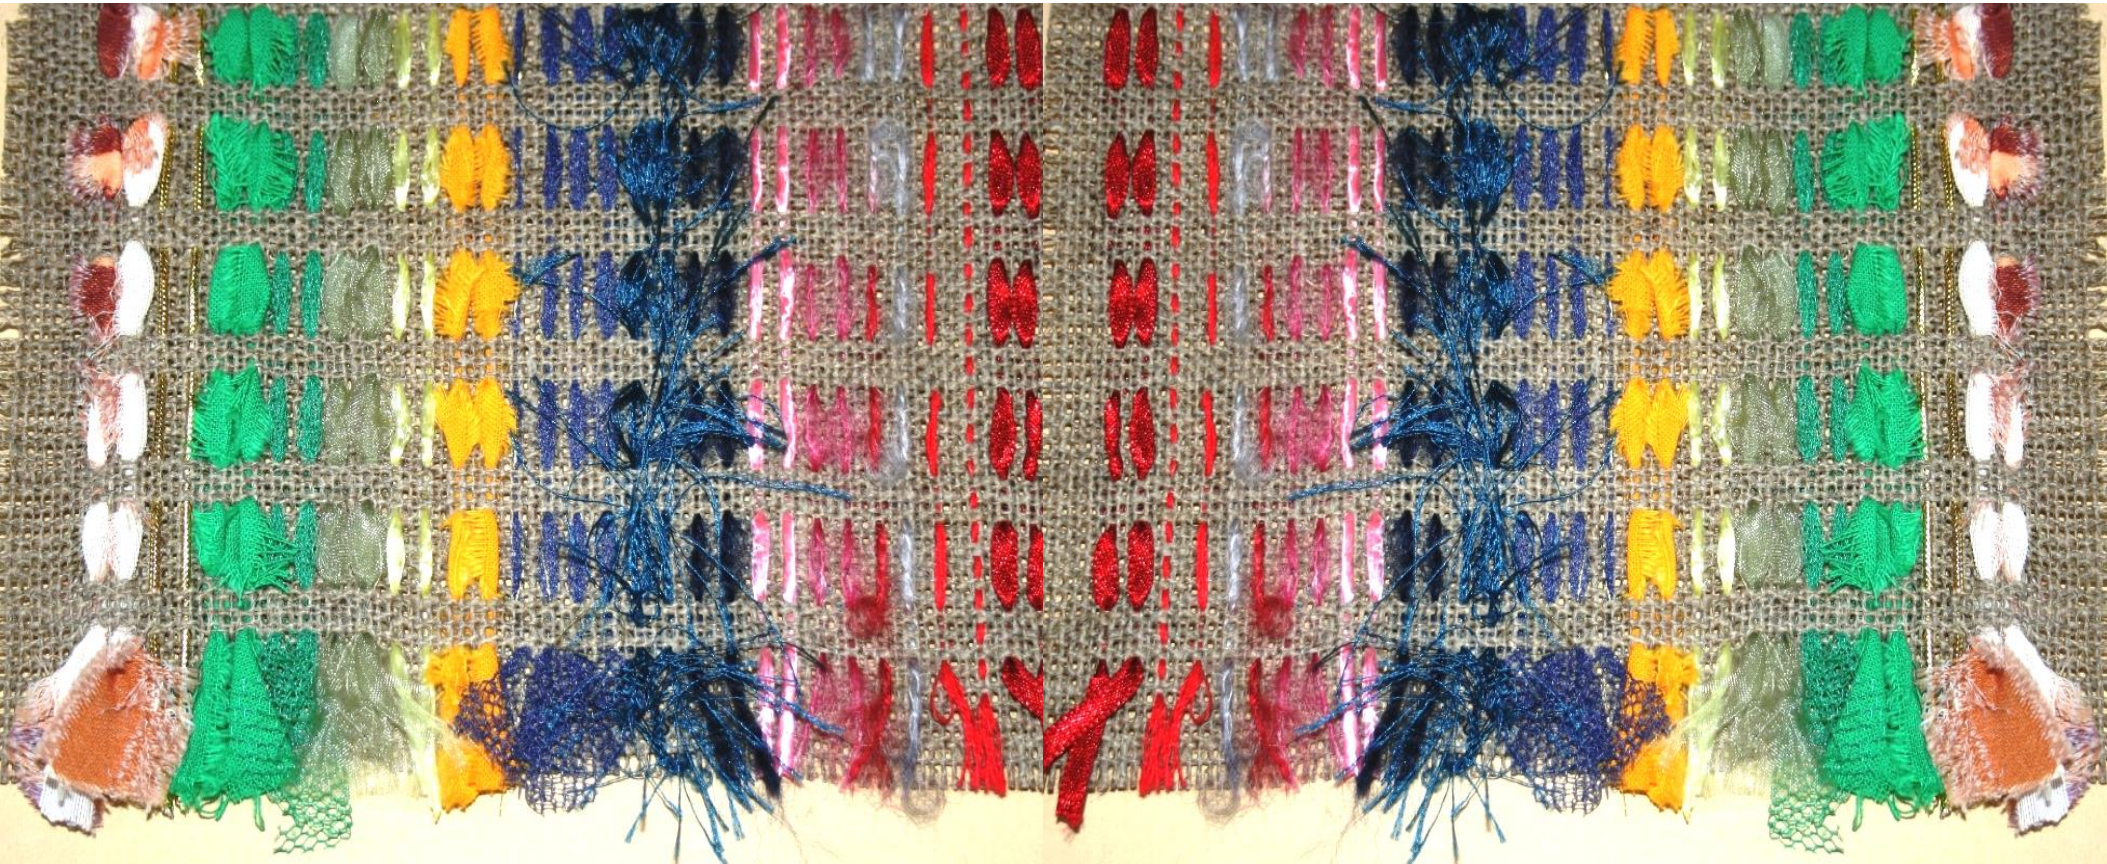

Setu tikand

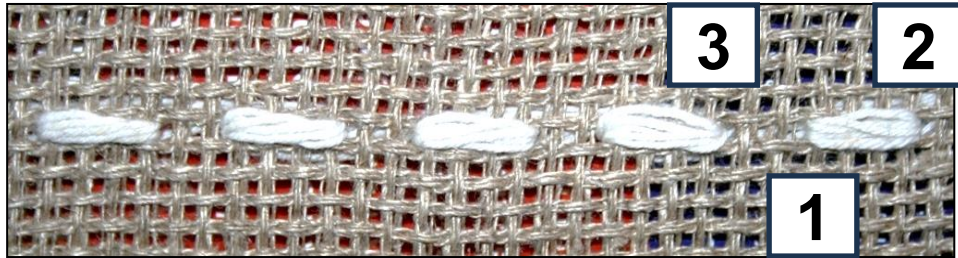

Katsetage erinevate materjalidega vabalt ja loominguliselt,
seadmata endale kindlaid reegleid ning piiranguid!

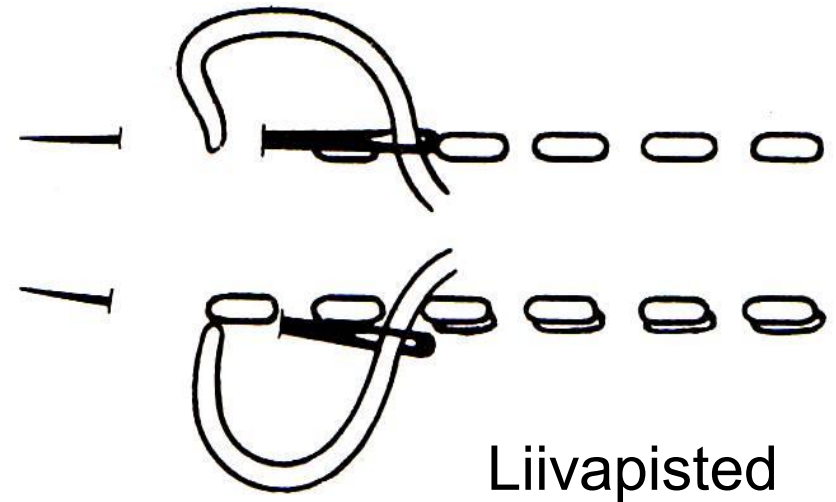

Järelpisted

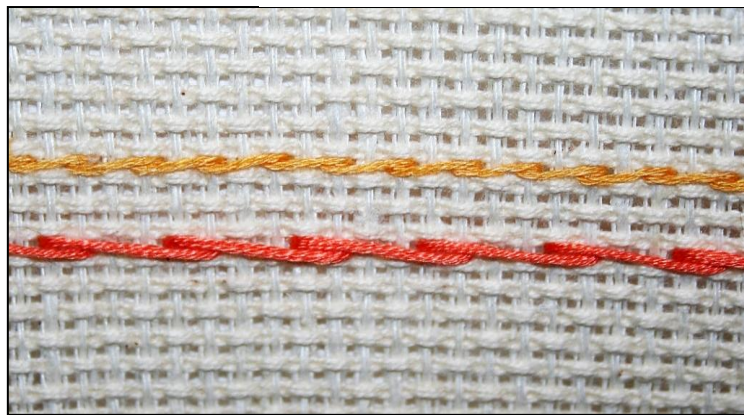

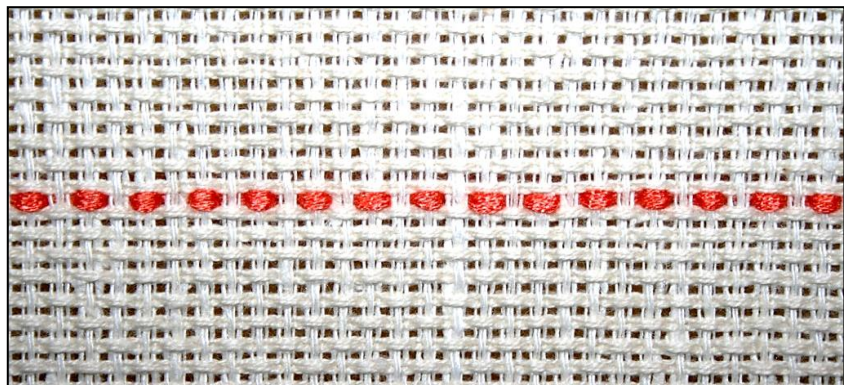

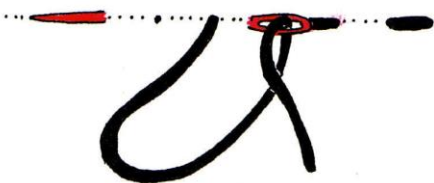

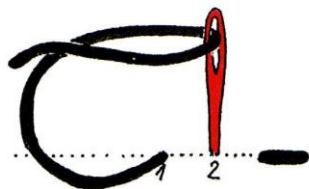

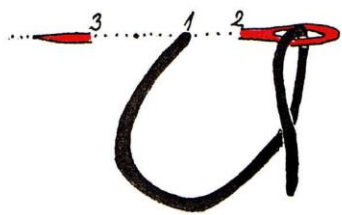

Järelpiste

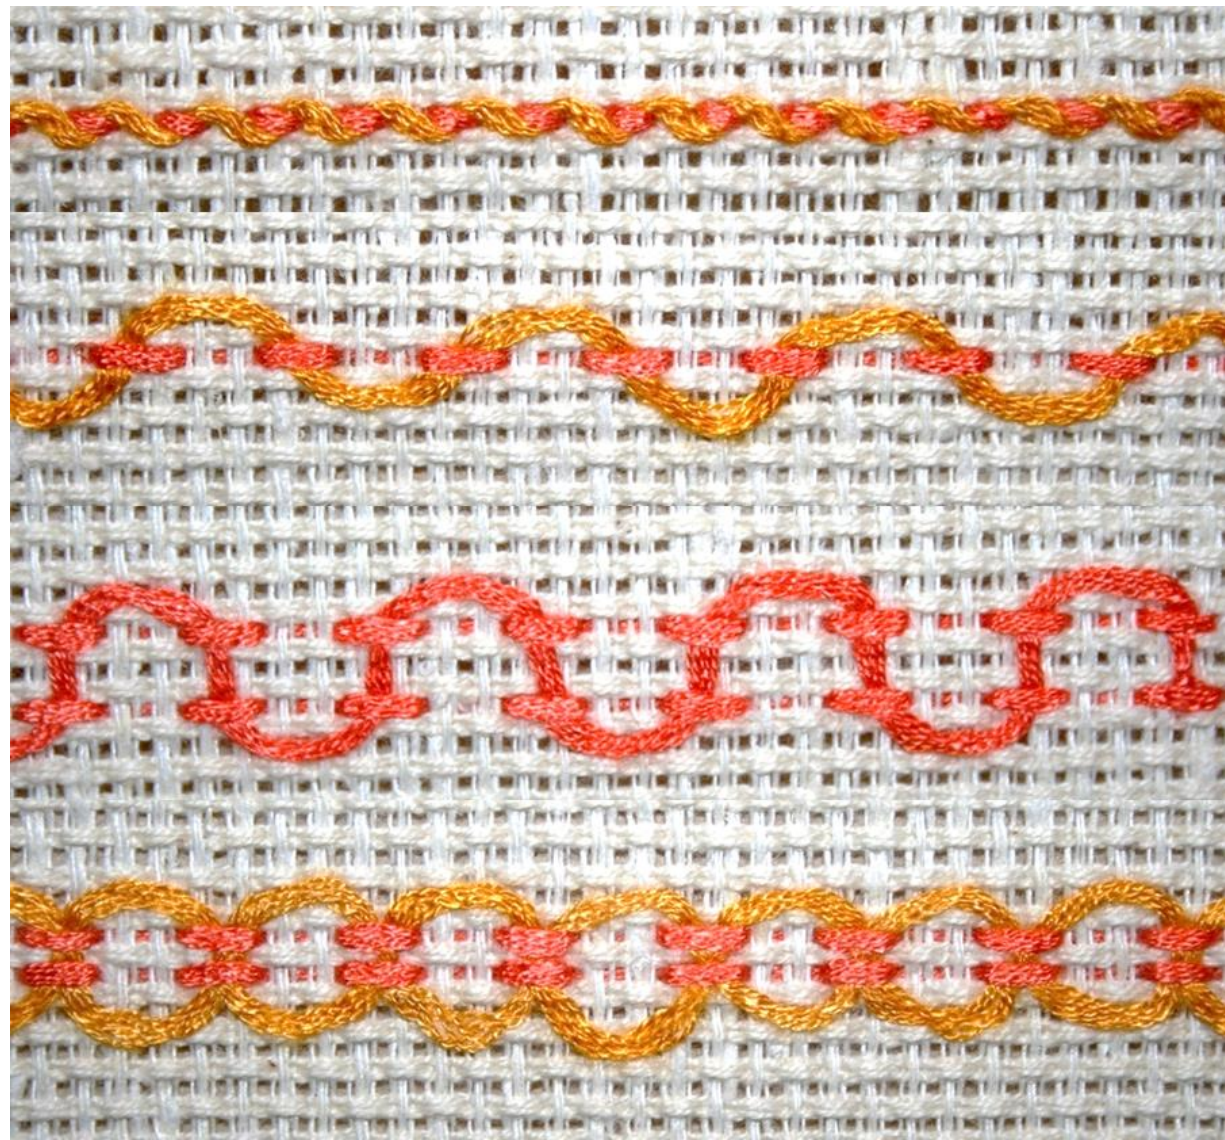

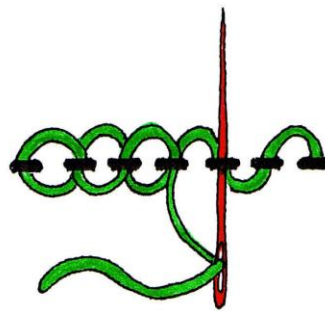

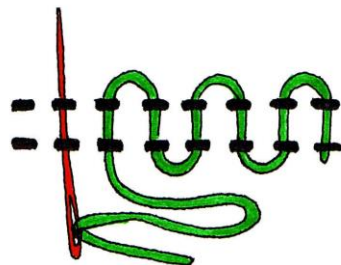

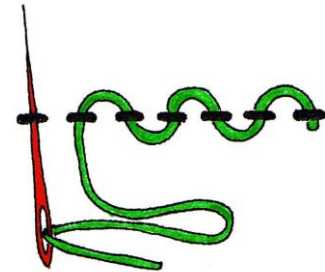

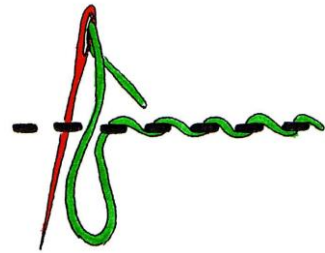

- Tikkimine paremalt vasakule.
- Pista nõel ühe piste pikkuse võrra paremale.
- Too seejärel kolme piste pikkuse võrra vasakule liikudes riidest välja.

- Tiki nagu järelpistet, aga korda ühte pistet kaks või enam korda.

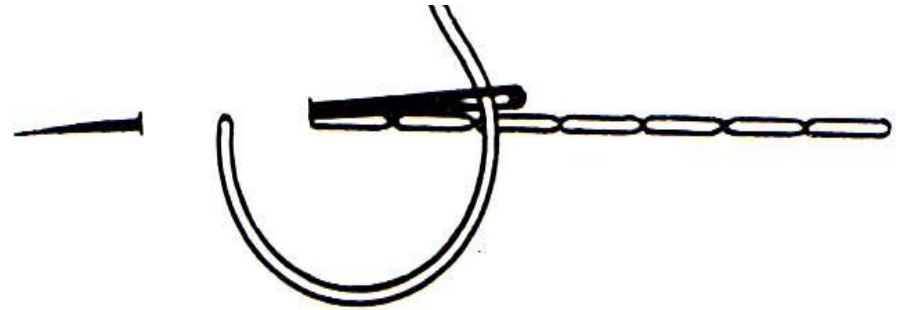

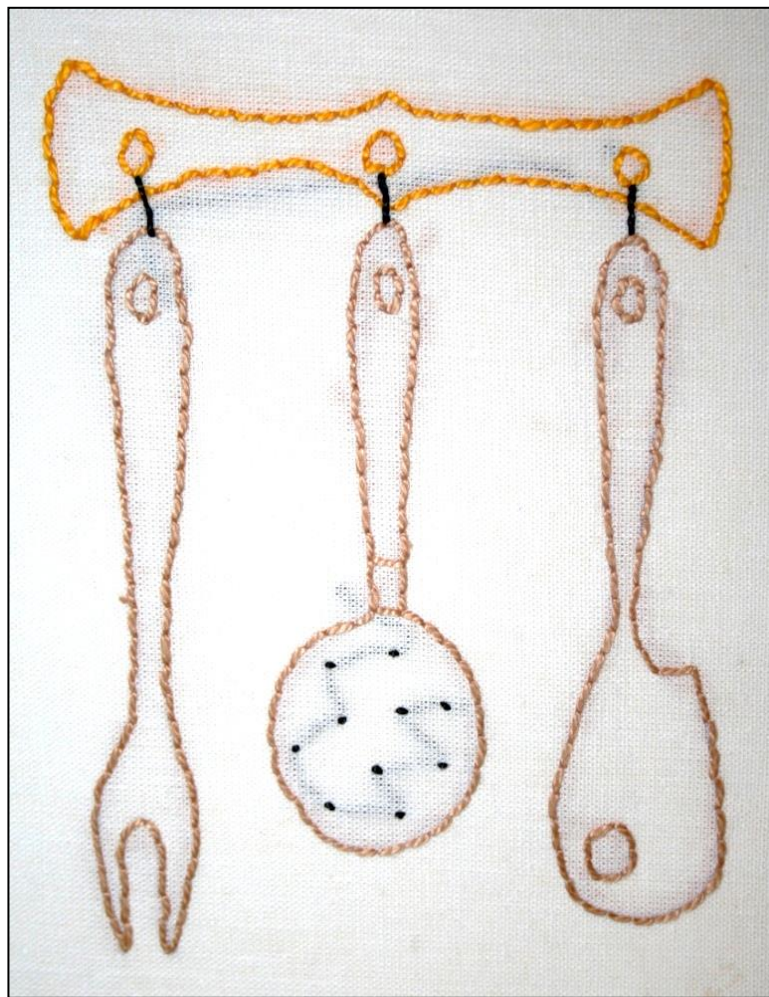

Tikkpisted

- Tikkimissuund paremalt vasakule.
- Paremalt poolt meenutab õmblusmasina pisterida, pahem pool varspistet.
- Pista nõel alguspunktist ühe piste pikkuse võrra paremale.
- Too kahe piste pikkuse võrra vasakule liikudes välja.
- Järgmist pistet tehes pista nõel sisse täpselt sealt, kus eelmine piste lõppes ja toovälja kahe pistepikkuse võrra vasakult.

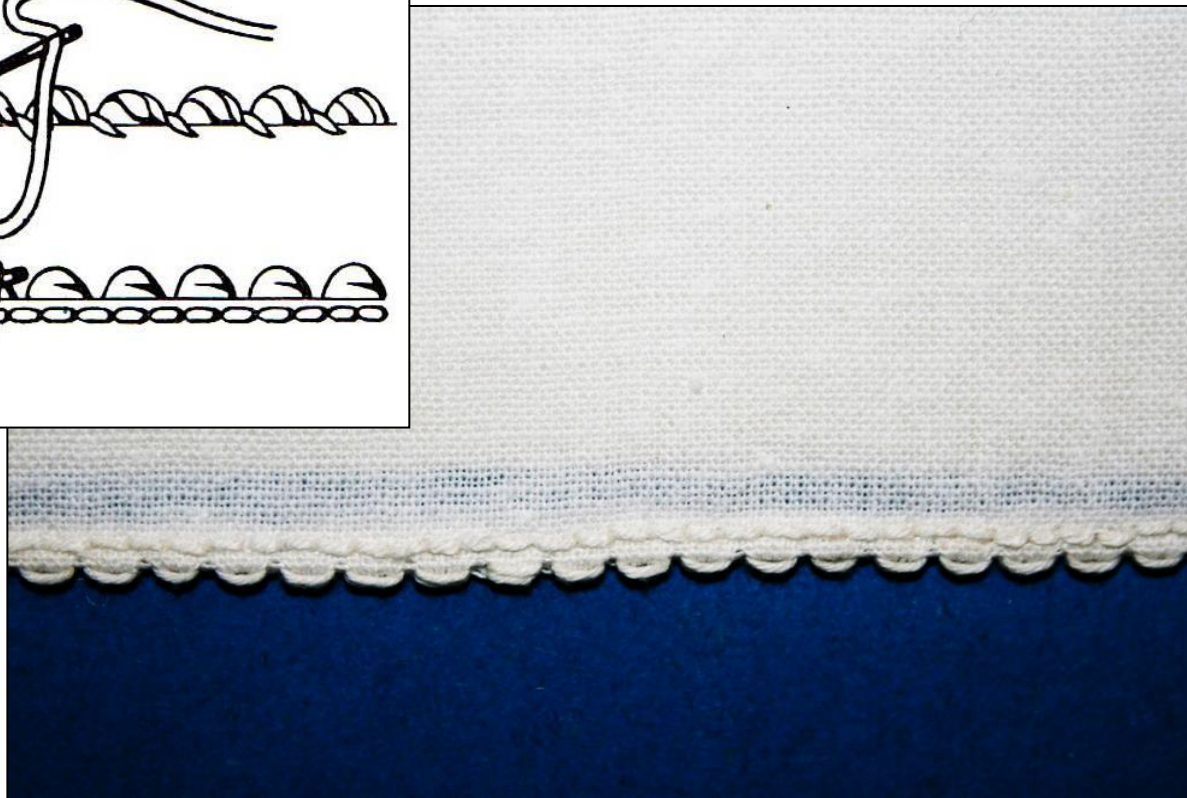

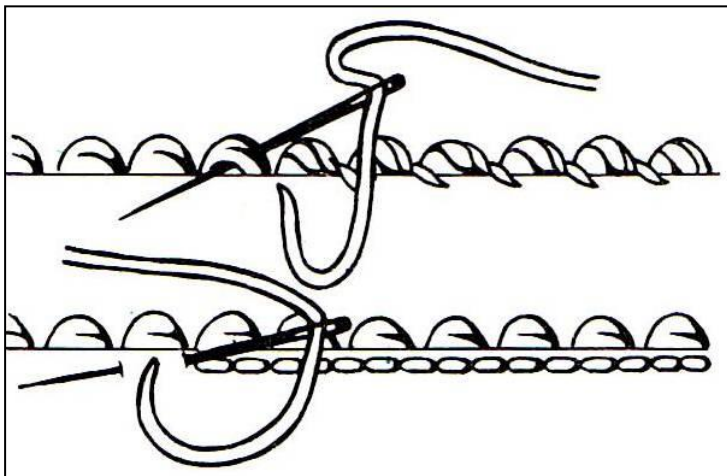

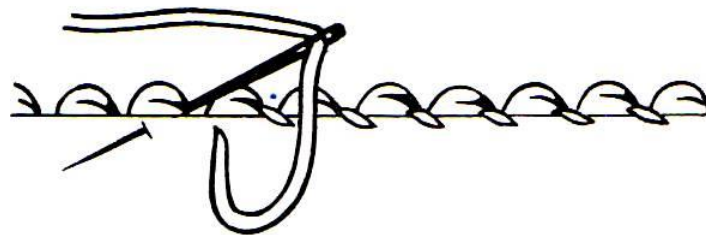

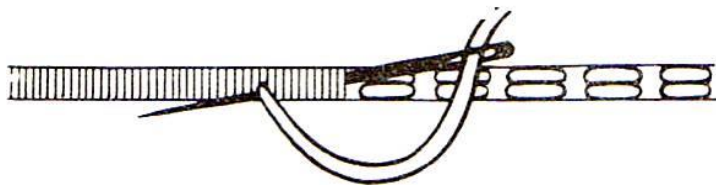

Tikkpiste

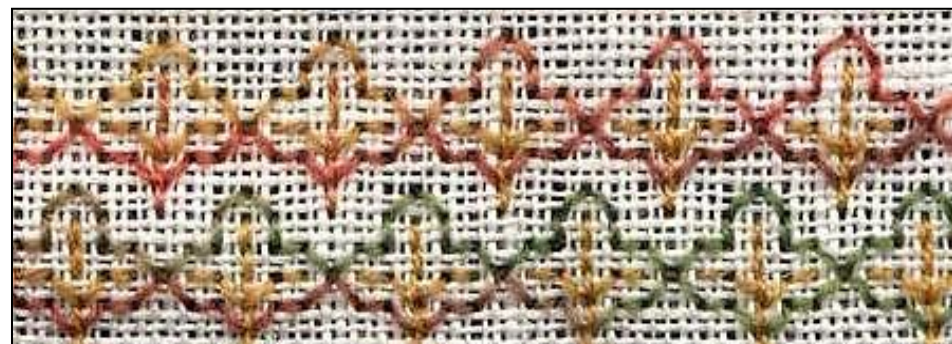

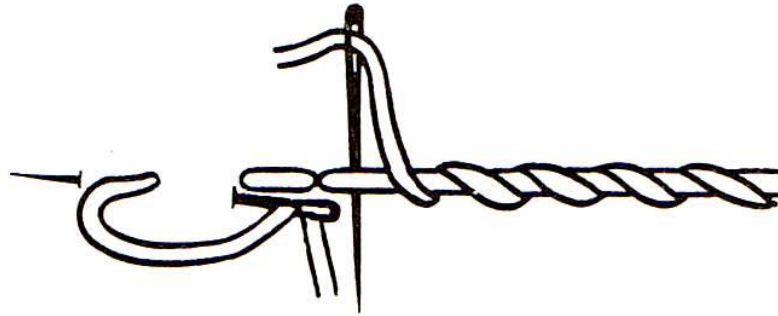

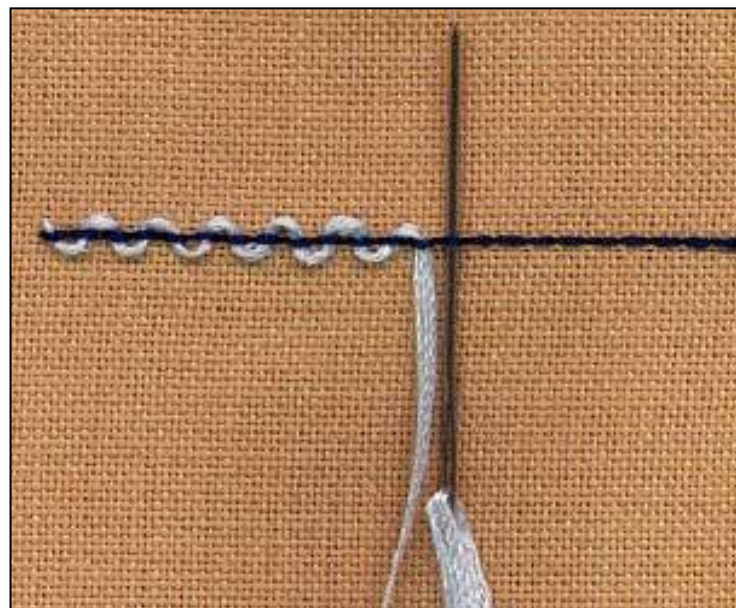

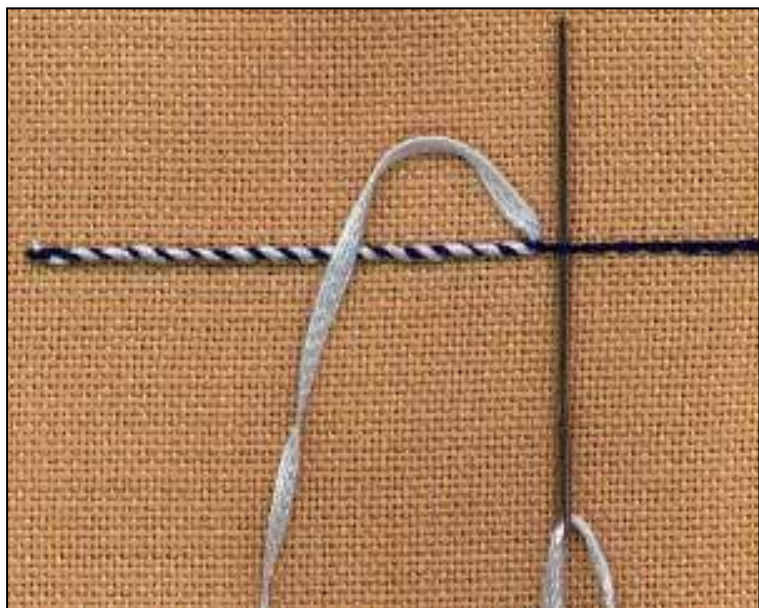

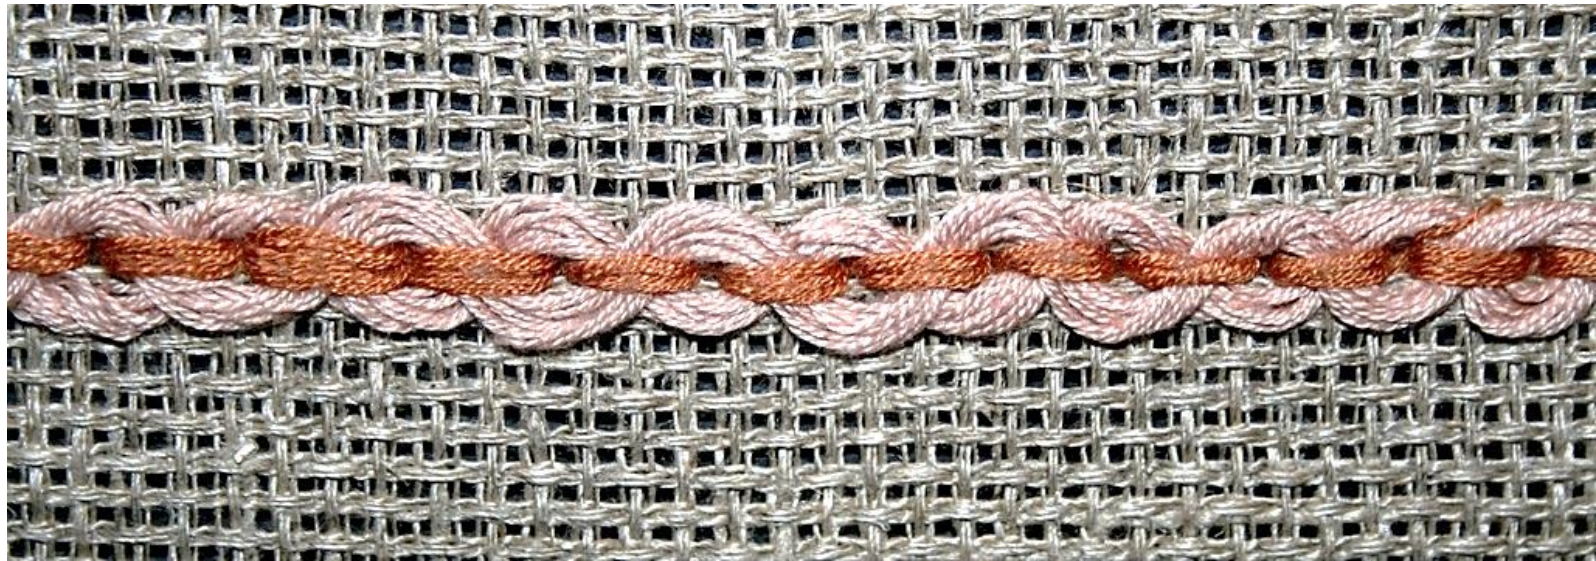

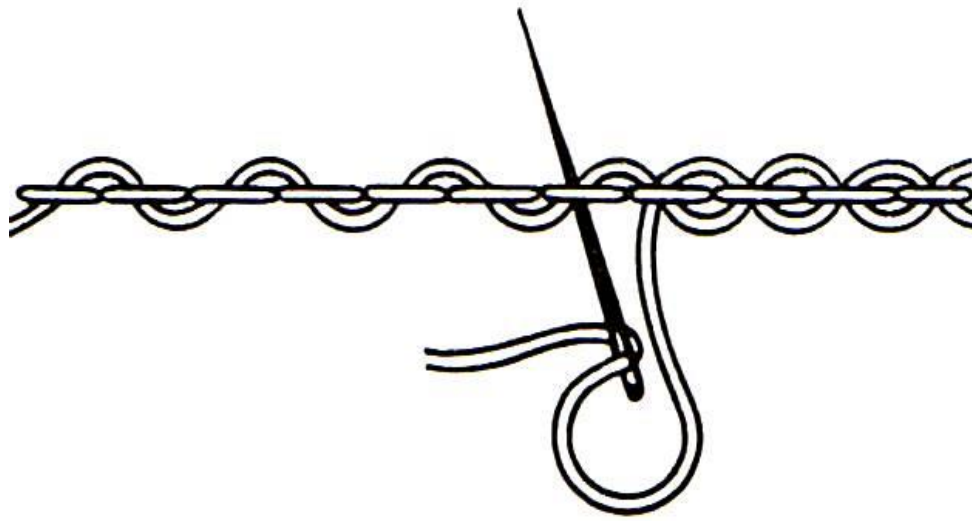

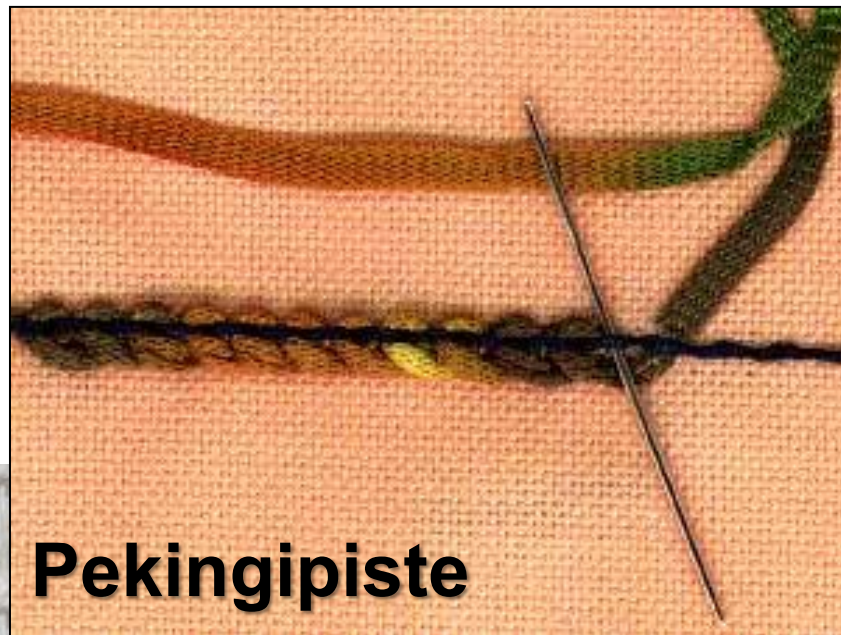

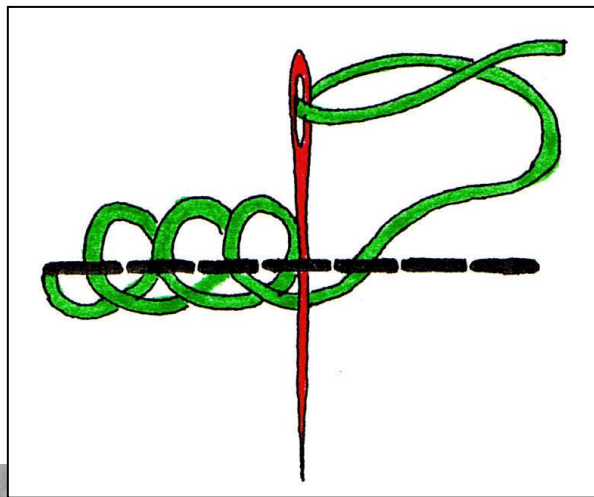

Ülepõimitud tikkpisted = tuletatud pisted

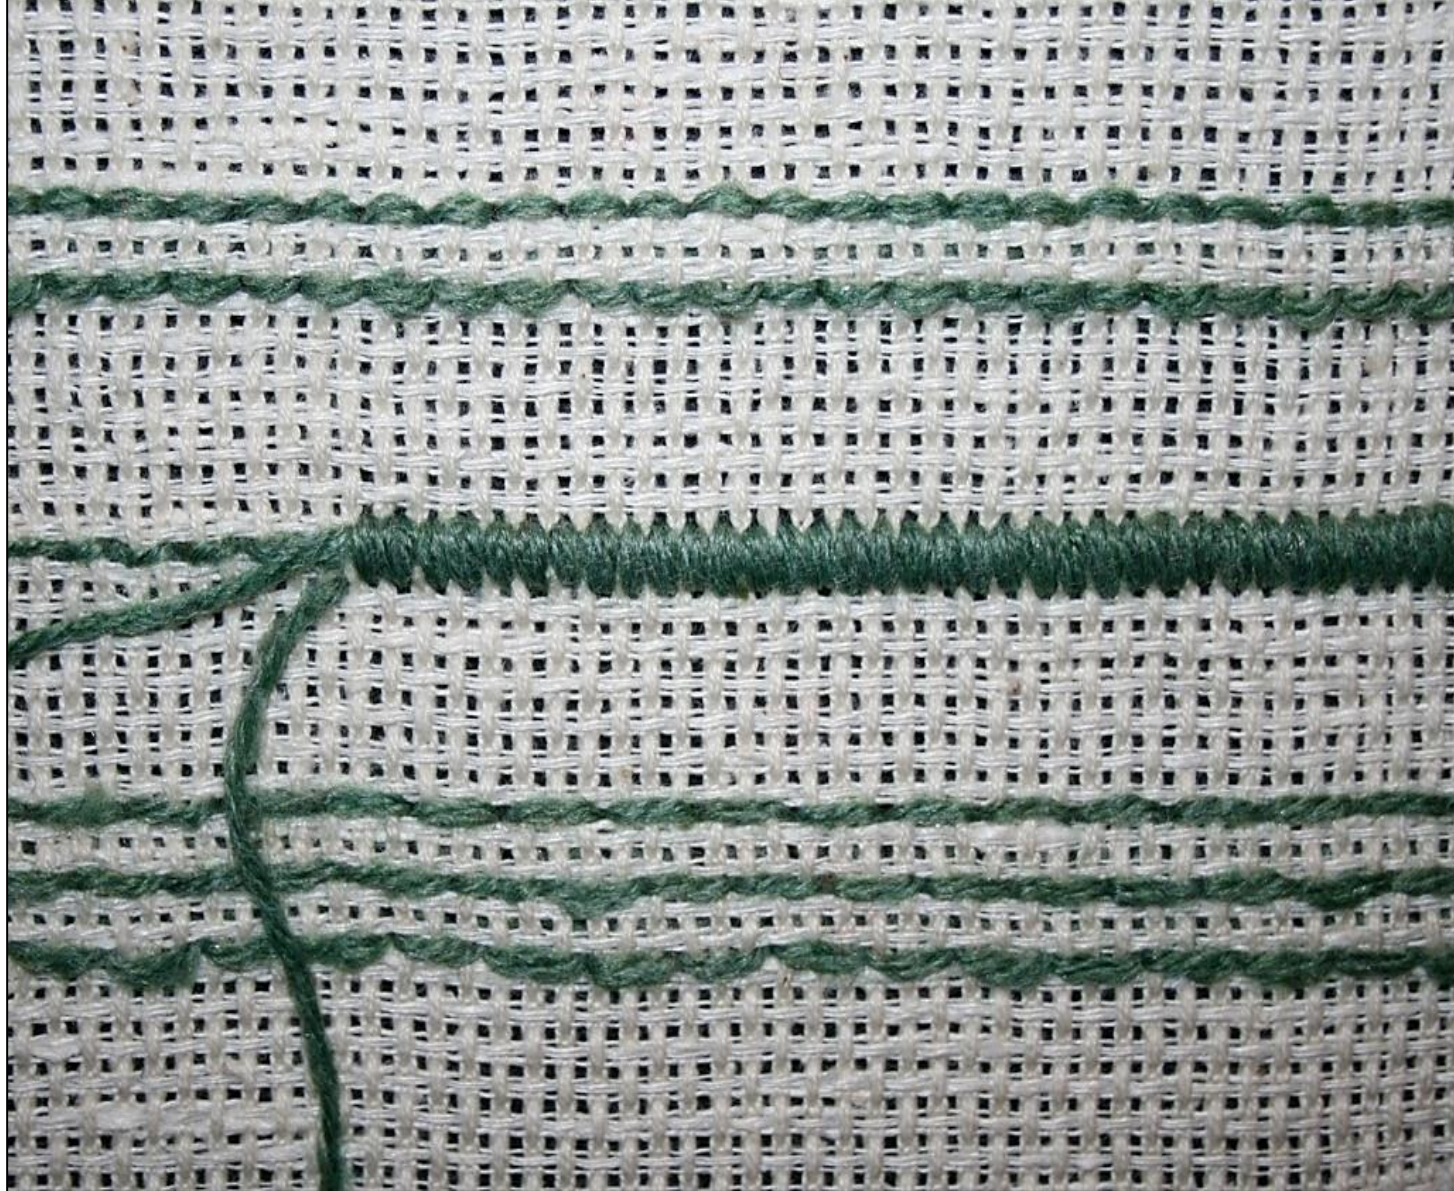

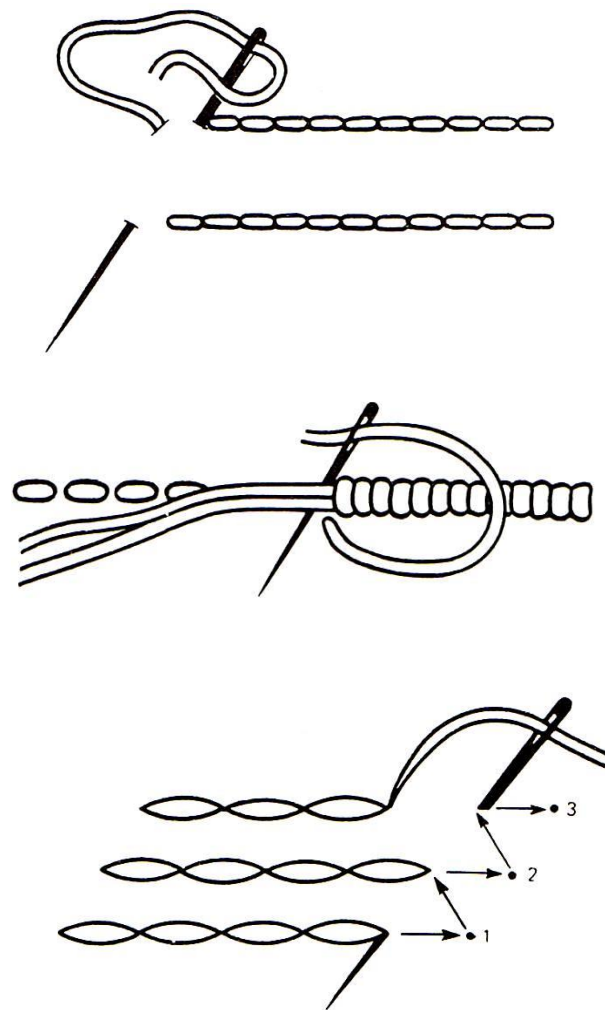

Pekingipiste

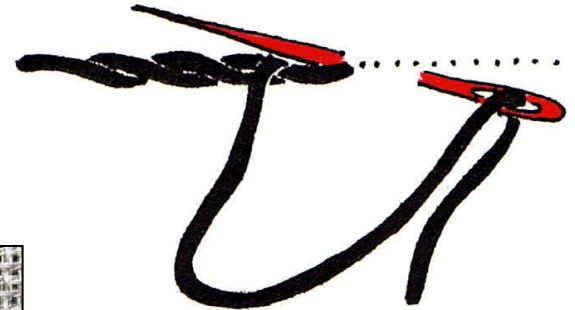

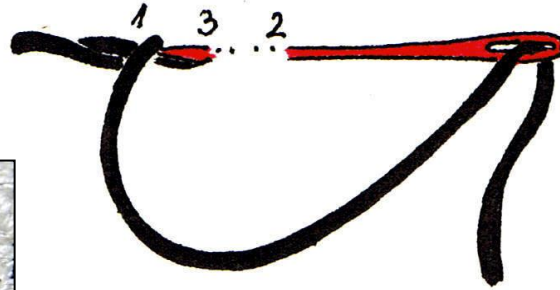

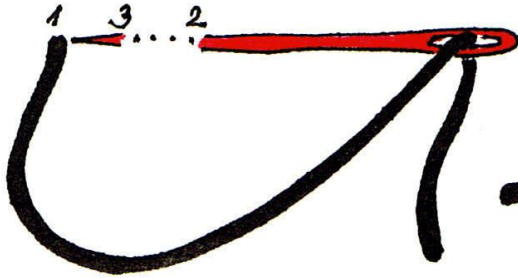

Varspisted

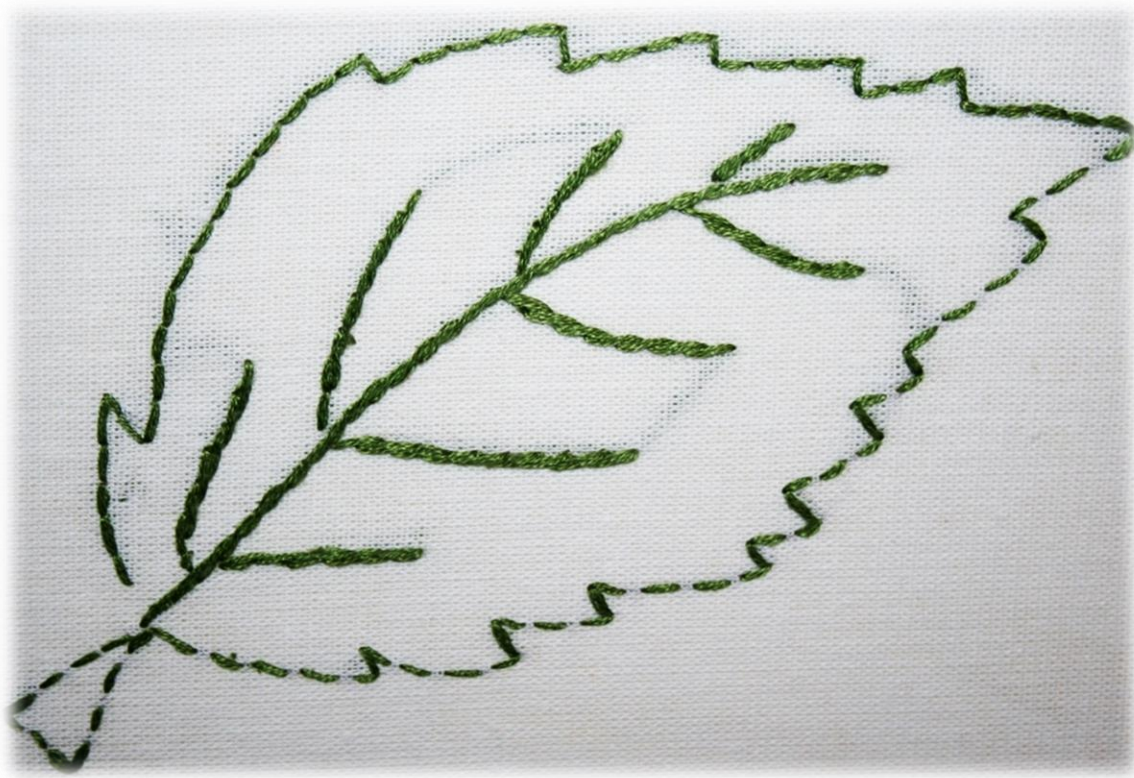

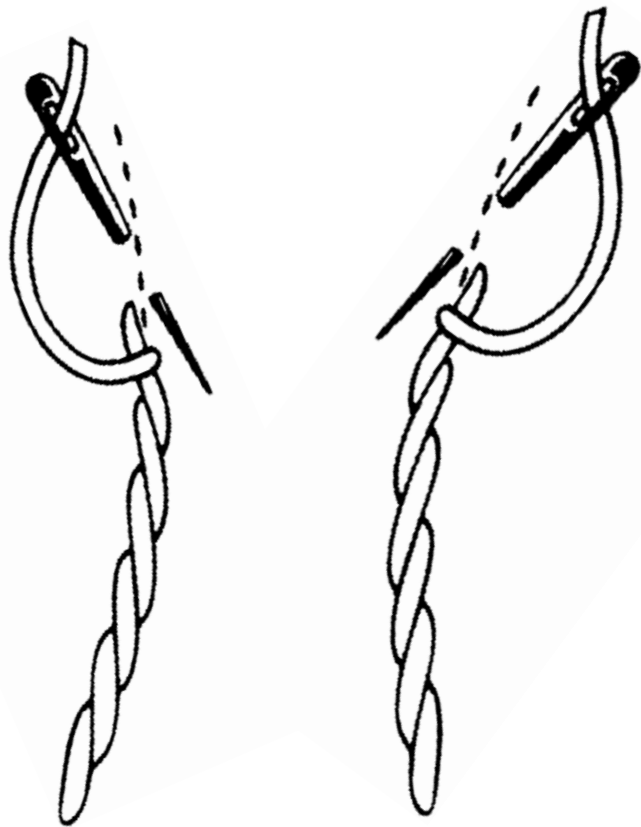

Varspiste = põhipiste

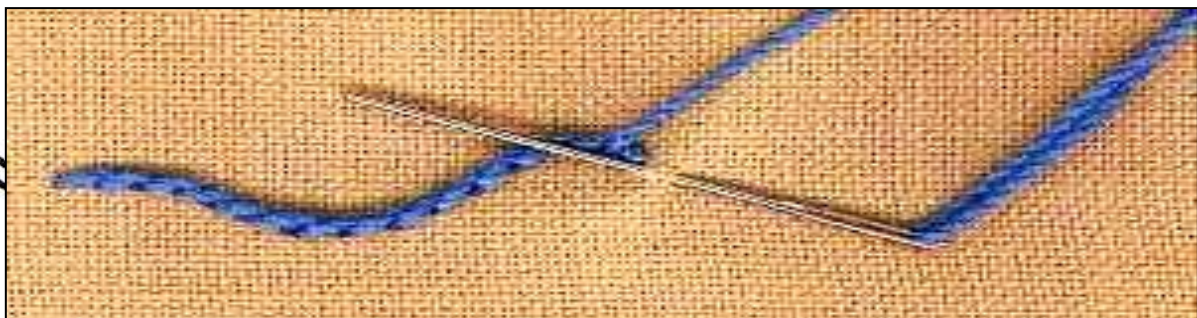

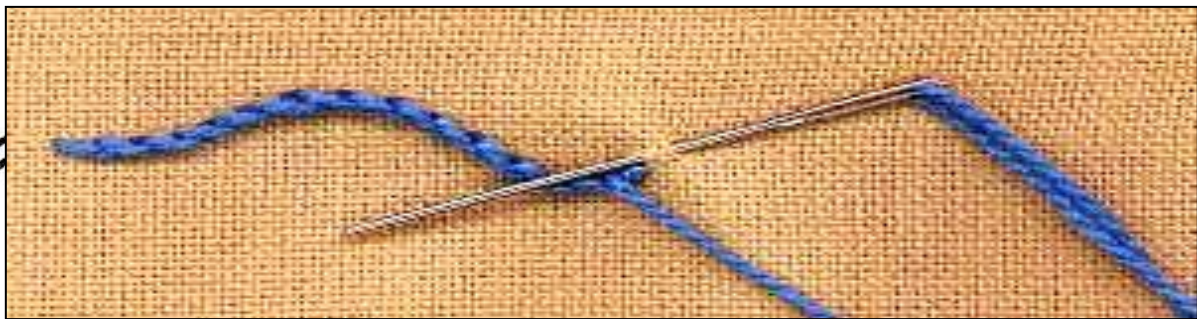

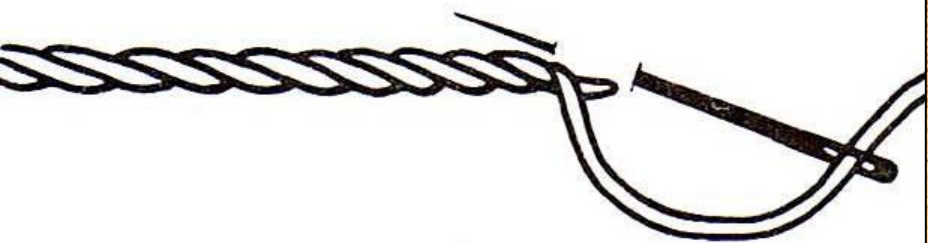

Tikitakse vasakult paremale, kuid võib tikkida ka endast eemale.

Varspiste = põhipiste

Seda pistest kasutatakse sageli lille- ja lehevarte tikimiseks

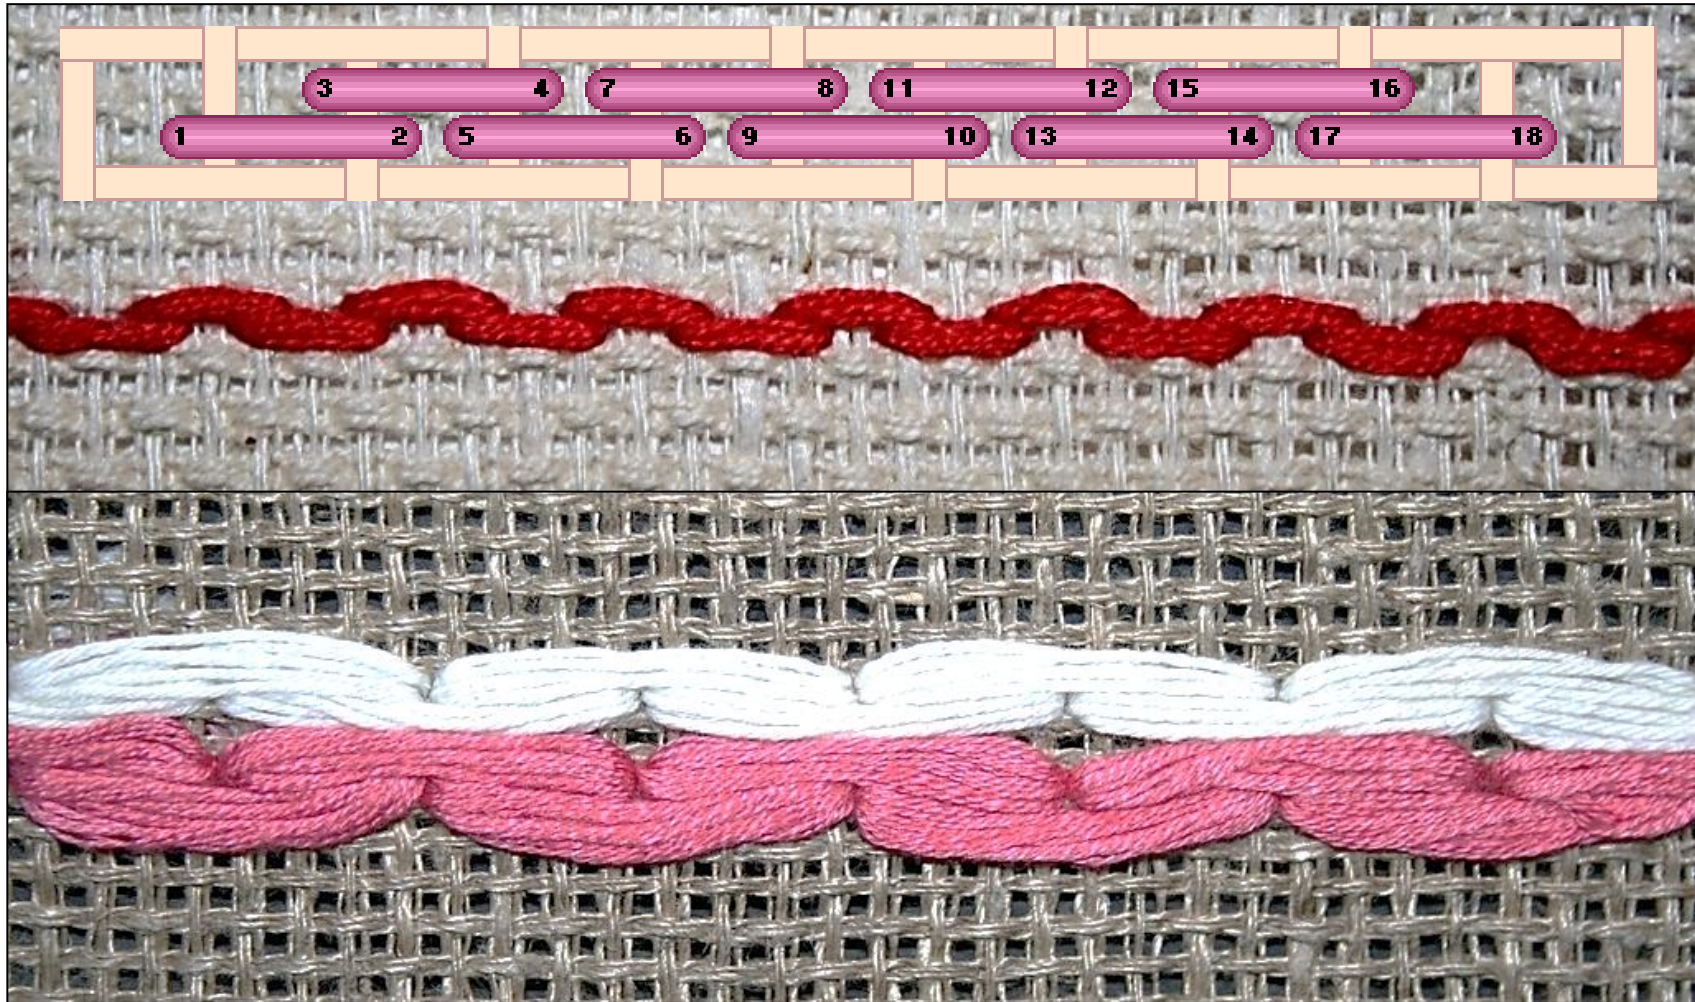

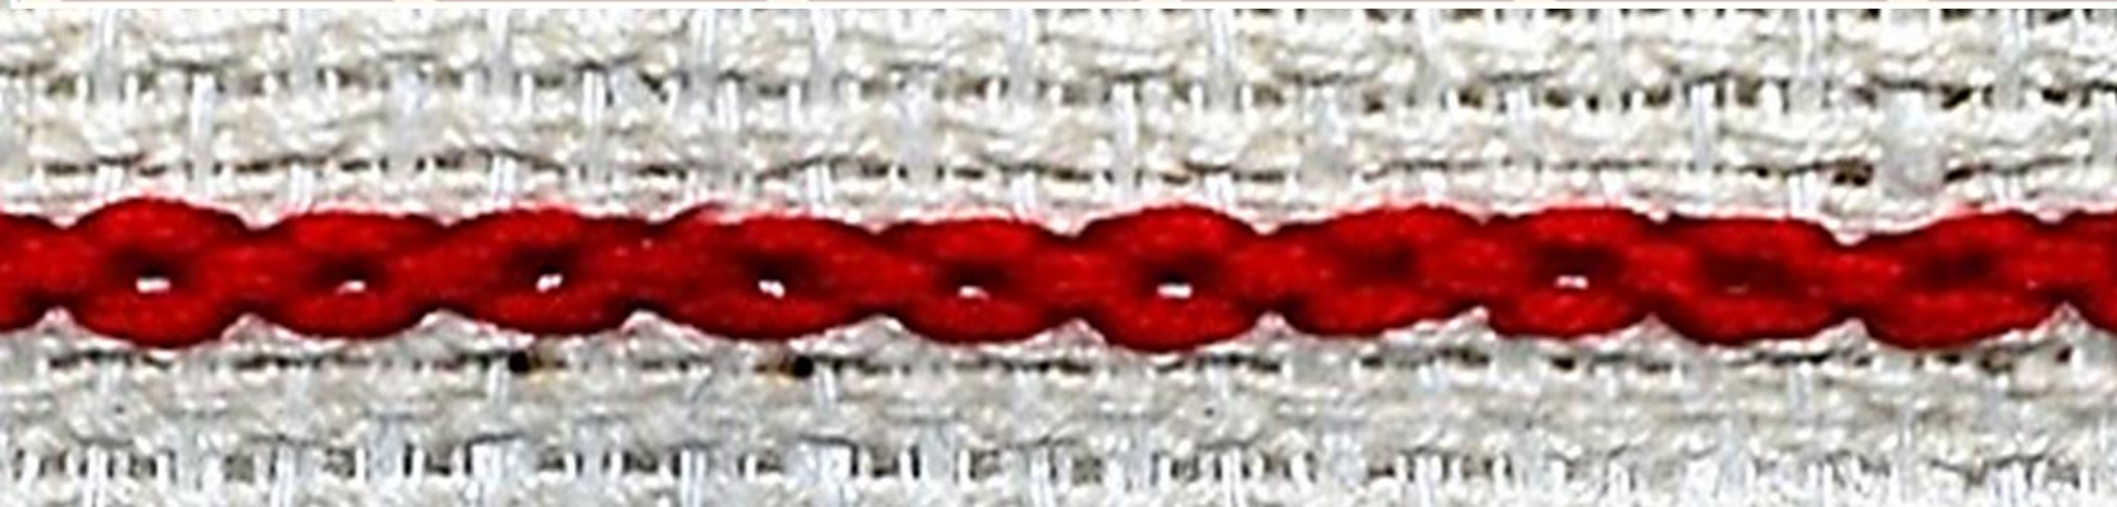

Vahelduv varspiste + laisapilu

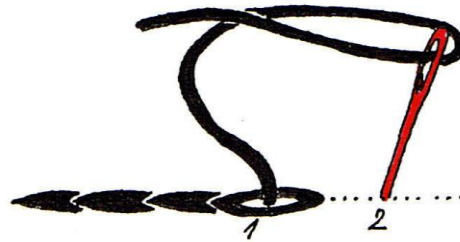

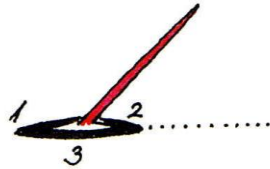

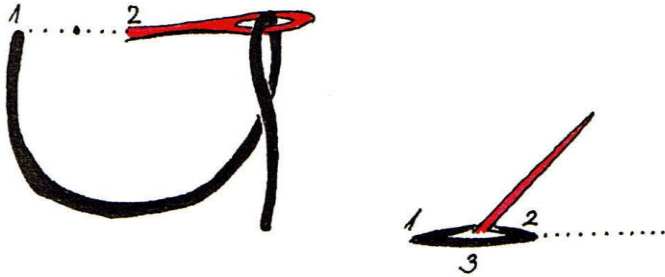

Laisapilu

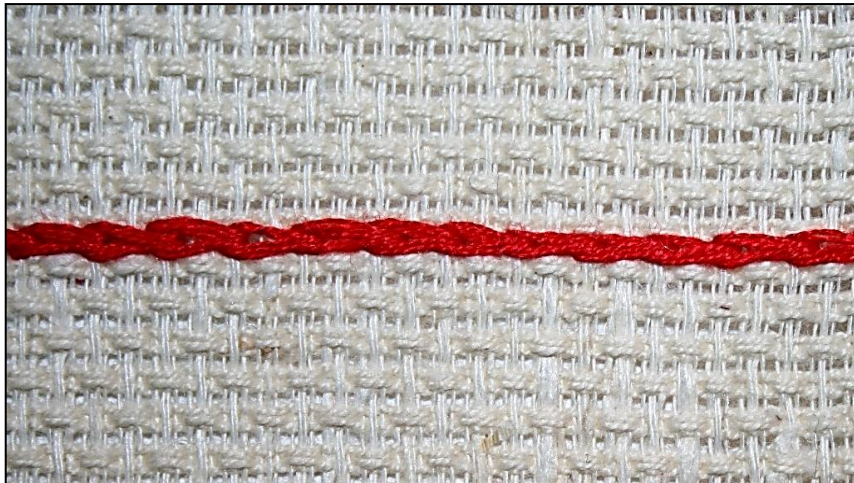

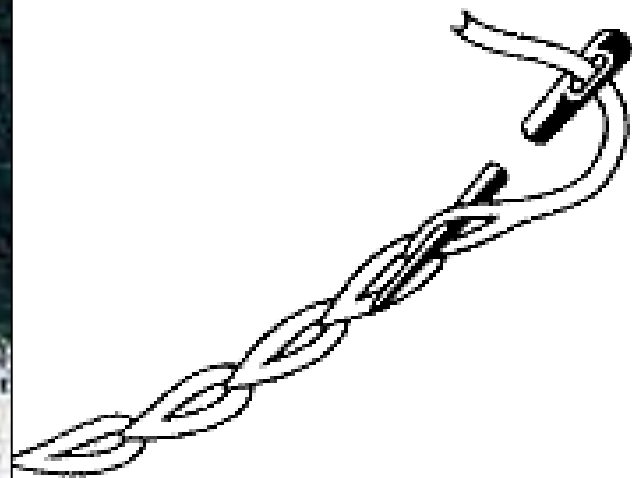

Lõhestatud varspiste

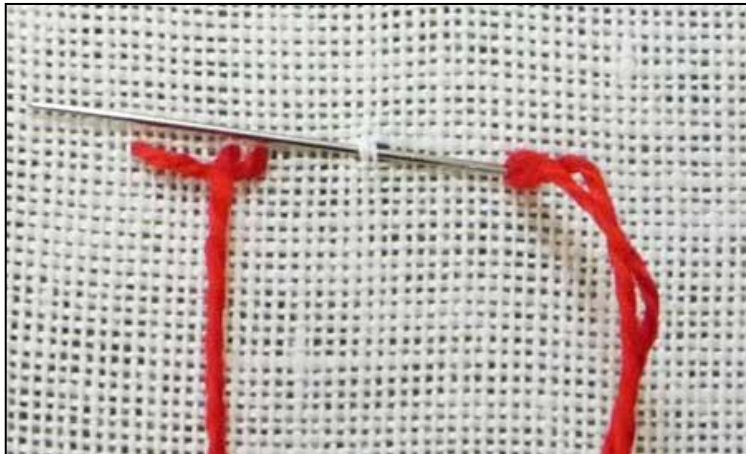

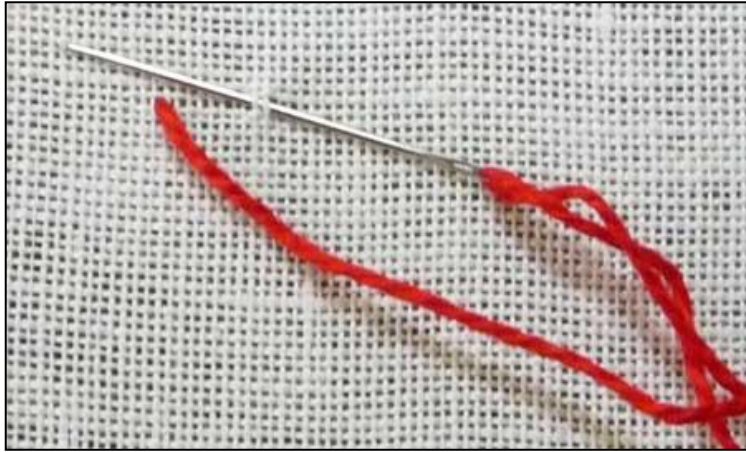

- Tiki nagu varspistet.
- Aga torka nõel eelmise piste keskelt läbi, nii riidest kui niidist, lõhestades viimase pooleks.

- Lõhestatud varspiste annab peene joone, mis on sobiv ka pinnatäiteks.
