

GreenTOP® Plant Power, known also as vermicompost, is an ecologically pure organic fertiliser, the product of processing cow manure through composting with the assistance of bred earthworms Staratel (Gold-digger). This organic fertiliser contains a whole balanced complex of essential nutrients and microelements, enzymes, soil antibiotics, vitamins, growth-promoting hormones. It also contains a lot of humic substances. GT Plant Power is a unique microbiological fertiliser with the community of useful soil microorganisms improving soil fertility. GT Plant Power does not contain pathogenic microflora, helminth eggs, weed seeds and unbinded heavy metals. The fertilizer is easily and gradually assimilated by plants within their life cycle. The fertiliser improves agrochemical characteristics, increases quality and yields of agricultural crops.

Usage

GT Plant Power is the main organic fertilizer for planting and feeding of all agricultural crops, forestry, and flower cultivation as well as soil reclamation.

Instructions for use

To make a mixture of soil for seedlings of vegetables and potting plants:

mix up to 10 per cent of vermicompost with your existing soil or peat.

To feed plants during vegetation: add 1 cm layer of Taimeramm and mix it with soil, then water, monthly during vegetation period.

To feed house plants: add 2-3 tablespoonfuls of Taimeramm to each plants pot.

All the dosage amounts are indicative.

GreenTOP products are safe for people, animals and bees.
