Projects with CEWOOD Design panels

ISSUE 1

# Introduction

## CEWOOD – Naturally Improving the Way People Live and Work

CEWOOD is one of the world's leading producers of wood wool panels – yet what truly sets CEWOOD apart is the way function and design come together. More than a finishing material, CEWOOD Design panels are a conscious design choice for architects and designers who value originality, performance, and natural aesthetics. At the heart of CEWOOD lies a commitment to people and the spaces they inhabit. By understanding how indoor environments influence comfort, focus, and well-being, CEWOOD creates solutions that combine acoustic performance with distinctive visual expression. Natural materials, thoughtful design, and sustainability are not add-ons – they are the foundation.

Our mission goes beyond acoustics. CEWOOD Panels shape spaces where people live, work, learn, and gather – from private homes and apartment buildings to schools, offices, retail spaces, sports halls, theaters, and concert venues. These are environments where sound, atmosphere, and design matter equally. Applied to walls and ceilings, CEWOOD Panels absorb noise while adding texture, rhythm, and character to interiors. They transform ordinary rooms into balanced, comfortable spaces – calm where needed, dynamic where desired. With CEWOOD, you're not simply choosing a finishing material. You're choosing a smart, original design solution that enhances both the experience and identity of a space.

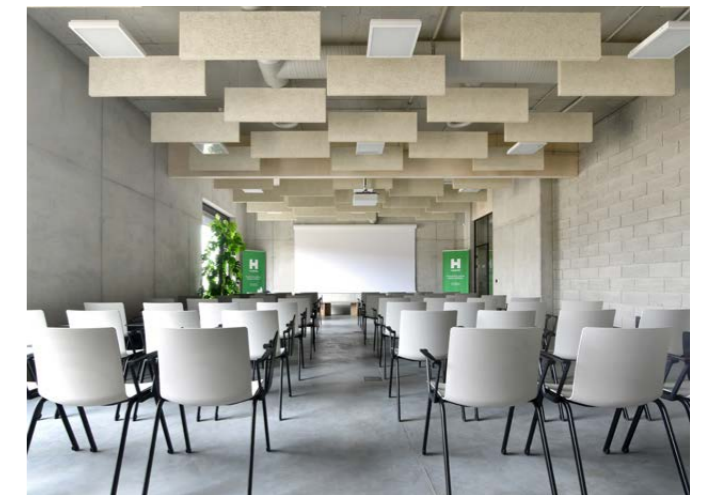

## Hagberg Office/ Training Center

Lauder Architects: "Workland Galleria Riga is inspired by the sensations of the urban environment. Although the streets can sometimes appear grey, overall, Riga as a city is vibrant and full of colour and life. We have used various materials, such as wood, metal, and brick, to welcome the spirit of the city indoors. We have used street art to draw focus to the main communication points. Comfortable and practical pieces of furniture and custom solutions make these Workland spaces unique, giving the user the opportunity to use them as needed."

The new Workland center is the largest co-working space in Riga and is situated on the 5th floor of Galleria Riga. Workland offers a wide variety of workspaces, from double offices to offices for large companies, meeting rooms, and open-plan work areas. A perfect solution for over 300 people who want to work in a unique location with ample opportunities to meet, enjoy a meal, shop, and work together – all without leaving the building.

CEWOOD has delivered a number of interesting solutions for the coworking space, in line with the vision developed by "Lauder Architects". The long corridors are visually balanced with CEWOOD Baffle panels, while the kitchen area is decorated with round Design panels. In offices, CEWOOD Panels not only create good acoustics and interior microclimate, they also form a part of the design, interacting with luminaires and even green plants.

## Šilainiai Swimming Pool

Interior Design:  
Evija Berga

Photo: Māris Šmits

Office at Candra Street features an open floor plan and high ceilings. In order to achieve optimal acoustic and indoor comfort, CEWOOD Panels were chosen as the finishing material for ceilings and walls. This office is special because the wall panels have futuristic pictures printed on them. This designer choice gives character to the entire office and provides a creative environment for employees.

Architect:  
TJ ARCHITEKTI

Photo: TJ ARCHITEKTI

During the renovation of Lufthansa offices, the TJ ARCHITEKTI team decided to install popular CEWOOD Baffle panels for their unique acoustic properties and aesthetic appeal. The project was executed in two stages to ensure uninterrupted call center operations, and despite the demanding logistics, the project was completed in record time. The result is a modern, functional space that meets Lufthansa's high standards while creating a comfortable work environment for its employees.

## CEWOOD Design

### CEWOOD Barcode

CEWOOD Barcode – stylish wood wool panel with a horizontal milled pattern for enhanced sound absorption and modern design. Perfect for walls and ceilings, it improves acoustic comfort in any interior.

### CEWOOD Panels with milled lines

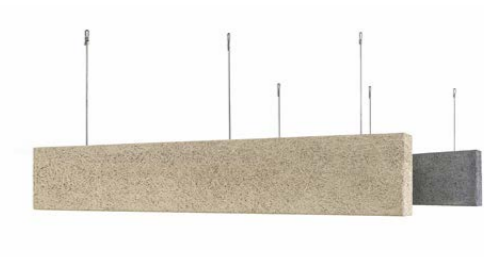

CEWOOD Panels with milled lines – wood wool panels with designer-specified milling patterns, tailored for unique wall and ceiling designs. Suitable for screw installation.

### CEWOOD Baffle

CEWOOD Baffle – double-sided wood wool panel with built-in suspension wires. Designed for acoustic ceilings and bold interior design with enhanced sound absorption.

### CEWOOD Lamellas

CEWOOD Lamellas – a double-sided, elongated wood wool panel with integrated suspension wires and reduced panel height. Designed for acoustic ceilings and bold interior concepts, offering enhanced sound absorption.

### CEWOOD Shapes

CEWOOD Shapes – wood wool panels in various shapes and colors to suit diverse design concepts and aesthetic needs. Ideal for wall and ceiling finishes.

### CEWOOD Print

CEWOOD Printed Panels – wood wool panels with custom large-format printing, allowing any image or graphic to be applied. Ideal for creative wall and ceiling designs.

# CEWOOD
