

WOOD WOOL – the wood used in production is spruce from local forests (harvested within 100 km from production facilities). CEWOOD is PEFC™ certified, and PEFC™ certification is our priority when purchasing timber to guarantee that the wood originates from responsibly managed forests.

CEMENT – in the production process, CEWOOD uses high quality Portland cement. In Acoustic panel and design tile production, mainly white Portland cement is used. In construction panels – grey Portland cement. Our suppliers extract raw materials with minimal environmental impact.

WATER – water used in the production process is from the local, 80 m deep artesian well.

CEWOOD acknowledges the importance of sustainability and protection of natural resources in today's world.

In all production facilities, we use renewable energy, as evidenced by Powered by Green™ certificate.

Colour variations

CEWOOD wood wool panels are available:

- non painted,
- in standard colours,
- in any other colour upon client's request according to RAL or NCS paint catalogues.

The standard colour range for CEWOOD wood wool panels include: non painted – natural, natural painted, white painted, grey painted, black painted.

Due to the nature of the material, colour variations may occur for the non painted panels. The main factors affecting colour variations are:

- wood tonality,
- growing conditions of trees,
- harvesting period,
- drying rate,
- water content of the wood,
- production process of the panels,
- hardening/drying of the panels.
