

How is the plywood packed?

The plywood panels are placed onto a pallet and secured with plastic straps. All packing materials are recyclable.

The following table shows the usual panel count in a plywood pack:

thickness (mm)	sheets per pack	m ³ per pack	m ² per pack
6,5	65	0,98	151,17
9	40	0,84	93,03
10	40	0,93	93,03
12	33	0,92	76,75
15	26	0,91	60,47
18	22	0,92	51,16

If needed, it's possible to change the panel count in a pack.
