

## INDUSTRIAL and TEXTILE FILMS

Estiko-Plastar's choice of films and bags for the building-, agriculture- and textile industry offers a versatile range of films and ready made packages for most of your needs.

Our main aim is to offer a high quality product that has great mechanical and functional properties which also give a down-gauging potential to reduce the amount of material used and decrease energy consumption. We offer different printed and unprinted films, bags and pallet covers that are mainly based on PE or PP.

- **Agriculture industry**

We offer heavy-duty films and ready made bags for packaging different products in bulk. These products include films in a wide thickness range for VFFS machines, bags with/without side gussets and corner seals, big bales, shrink hoods, greenhouse films, regular pallet covers and others. These can be produced transparent, tinted or colored. Additivation range includes fast and slow migrating anti-static additives, UV absorbers for outdoors storage and antislip. Different printing and perforation possibilities are available.

- **Building industry**

For the building industry we offer different types of films, bags and pallet covers for regular wrapping, shrink-wrapping or covering. Mechanical properties can be changed in a very wide range. These products can be produced transparent, tinted or colored. Additivation range includes fast and slow migrating anti-static additives, UV absorbers for outdoors storage and antislip. Different perforation possibilities are available.

- **Textile industry**

The range for textile industry comprises of ready made and (non)printed bags, tubes and bags with flaps and glue-strips. Textile bags have good to excellent transparency and gloss. Glue-strip option gives a permanent seal or reclosable option to the bag.

**PS.** Don't forget to read and ask about our **new laser-technology** and **sustainable packaging** options to see the potential for added value for your products!
