Engineered wood flooring

PARADOR
Art of living meets performance demand

For us, the art of living is an appreciation of beauty and to create inspiration out of it at any moment in time.

Performance is a permanent feature of our life. Day after day, we demand performance. Delivering daily performance requires solid ground beneath our feet.

Parador – living performance.
PARADOR
Every day quality

Living spaces are an expression of our individual attitude to life and of our own demands. For us, making high demands means having a special awareness for quality.

Parador offers premium products for quality living. The quality of Parador can be seen in the use of high-value, beneficial materials for home-living, perfect finishing and critical flair for natural impressions and stylish design.
Performance
Systematic strength

Engineered wood flooring enhances the value of living spaces in a visible manner. The natural material wood lends warmth and homeliness to any room and provides the perfect foundation for tasteful and stylish furnishing. Parador engineered wood flooring performs highly with a system: selected timbers in various plank formats and installation patterns open up a unique spectrum for exclusive flooring design with a high benefit level.

Healthy living
Parador engineered wood flooring is produced from carefully selected materials that are healthy in the home, meaning that our floors are low on emissions and made from natural raw materials. Quality controls along the entire value creation chain guarantee that products are harmless for people and the environment.

Environmentally aware
Parador uses timbers that come from sustainable forestry. The production process, the packaging and the logistics also set standards in terms of ecological practices.

Home comfort
As a natural product, Parador engineered wood flooring has a positive effect on the indoor climate due to its moisture-regulating properties. As a wood product, it can absorb moisture and release it again. At the same time the floor is pleasantly warm to the feet.

Durable
A special surface sealant protects the floor, makes it robust, durable and long lasting. It is easy to clean. There are various applications for the floor, therefore. Besides living rooms, Parador engineered wood flooring, depending on how it is used, is also suitable for offices and commercial areas.

Intelligent
Parador engineered wood flooring can be installed quickly, neatly and safely due to the intelligent click mechanism. The new floor is immediately ready for use, irrespective of the installation method (floating installation or glued over the whole area). Secure connections guarantee fitting accuracy and stability. Parador engineered wood flooring can be installed on underfloor heating systems, of course.

Renovation-friendly
Parador engineered wood flooring is a long-lasting floor covering with a top layer made of solid wood. If renovation becomes necessary after many years of use or due to damage, Parador engineered wood flooring can easily be freshened up or, thanks to the solid top layer, sanded down and renovated.

Made in Austria and Germany
The high quality standard of Parador is also demonstrated in the technologically leading production process, which is based on an appreciate, environmentally friendly and socially responsible corporate policy. All the partners that Parador works with are selected carefully in accordance with this. As Parador engineered wood flooring is manufactured exclusively at the Parador plants in Güssing and Coesfeld, it proudly bears the seal »Made in Austria and Germany«.
Parador engineered wood flooring offers the highest level of quality. That is why Parador only uses high value, healthy raw materials and timber from sustainably managed forests. All Parador floors are regularly checked along the entire production chain: internally by the Parador quality management and externally by independent institutes.

**Tested Rating »recommended«**

En 14342:13
The CE mark is mandatory under EU law in conjunction with product safety.

LGA certificate of quality
This certificate is awarded by the Landesgewerbeanstalt of Bavaria if the LGA guidelines for handling, use and surface properties as well as environmental compatibility are fulfilled.

Der Blaue Engel
The »Blue Angel« certifies Parador engineered wood flooring as a low emission product. The eco-label RAL-UZ 176 is awarded by the German Institute for Quality Assurance and Certification with the participation of the Federal Environment Agency.

Real Wood
The »Real Wood« quality seal is an initiative of the FEP (European Federation of the Parquet Industry). To make it easier to identify original products, only solid and multi-layer real wood floors bear the »Real Wood« logo.

LGA tested for harmful substances
Parador engineered wood flooring meets the criteria for products low on harmful substances. The quality seal of ecological product testing identifies products that are low on emissions and have been tested for harmful substances.

Émissions dans l’air intérieur (Class A+)
This national classification in France identifies the quality of the indoor air.

PEFC™
PEFC™ is a global organisation with the aim of establishing sustainable forestry worldwide. Every product that bears the PEFC™ label, comes from a certified product chain, in which the forestry management, including the transport of the wood to the forest road, is featured.
Design as an expression of individuality

Fine timbers in attractive finishes offer a wide spectrum of colours and textural nuances. With great design skills honed over many years, Parador designers create engineered wood floors, many of which have become classics.

In uncompromising perfection, planks in the widest variety of formats are produced with or without a bevel. Different surfaces and textures give the floors authenticity and a tangible experience. The result is impressive, extraordinary engineered wood flooring.
Variety of designs

More than a surface
Varied and authentic

Wood is a living material and changes over time; every tree is unique, every plank a unique specimen. Based on this knowledge, an attractive product range emerges at Parador by using different grades, surface treatments and groove designs. Together with selected timbers in various plank formats and installation patterns, engineered wood flooring opens up a unique spectrum for exclusive flooring design.

Surface textures
Every wood has its own markings and texture, which make it unmistakable. At the same time, wood, as a unique natural material, provides the option of further enhancing these textures. Parador impresses with a range of widely different surface textures.

Grade
As a natural, living material, timbers are never the same. The timber of one and the same type can have very different characteristics – from a calm, harmonious wood character to a lively and expressive one. In this way, the choice of grade also shapes the effect of a room.

Surface finish
The surfaces of the Parador engineered wood floors come in versions with a multi-layer lacquer finish and in naturally oiled types. The decision for a finish depends on personal requirements of the floor and of course on individual taste.

Groove design
The difference is in the detail. The characteristic profile of a floor is largely determined by its groove pattern. Whilst an installation without bevel, such as with a 3-strip floor, creates a calm, self-contained impression, the special emphasis of a wide plank is generated by a bevel. The Parador range contains floors with a 4-sided bevel and 4-sided mini bevel.
Surface textures
For a complete image

Handscraped
Specialists finish every single plank individually by hand with traditional craftsmanship. During the production of Parador »handscraped«, manual planing gives the floor a very original, authentic character.

Elephant Skin
Wood features like grains, knots and cracks are treated by the craftsman and presented in detail. The hand-made »Elephant Skin« surface thus reinforces the unique character of each plank. The result is an aged and almost historic-looking floor.

Wavescraped
Inspired by the power of water, which shapes the coasts, cliffs and driftwood, we have developed the »wavescraped« surface, which brings irregular and shallow recesses to the wood, similar to the marks left by a wave on the beach. A visible and tangible experience.

Sawn texture
Based on finishing wood using hand tools, when planing and sanding machines were not yet invented and beams and boards were installed in a clean sawn condition, we have used intelligent technology to replicate this sawn look. The irregularity of the saw marks running at right angles to the grain characterises this traditional, archaic design.

Brushed texture
Finishing the wood surface with stainless steel brushes intensifies the natural grain of the wood. The wood texture is not only visible but also provides an authentic feel.
Surface finish
For long-lasting pleasure

The deep impregnation repeated on the naturally oiled floors several times emphasises the natural wood grain and protects the wood from the inside.

The floors are given a multi-component lacquer finish, which makes the floor elastic and increases its scratch resistance.

Lacquer
A refined, satin lacquer finish provides ideal protection against dirt and wear.

Matt lacquer
The protective lacquer finish with the natural matt look of an oil treatment emphasises the colour and texture.

White matt lacquer
In addition to »matt lacquer finish«: colour and textural nuances in the wood are complimented by white colouring.

Natural oil
The original character of the wood is brought out. The wood’s own patina develops with optimal protection.

White natural oil
In addition to »natural oil finish«: colour and textural nuances in the wood are complimented by white colouring.

Untreated
Floors without surface treatment for an individual on-site finish.

Finishes & colours: Please bear in mind that the images shown represent any given surface finish and that the colour changes slightly according to the possible alternatives. This difference is most obvious between natural oil and lacquered finishes.

Groove design
An important detail

Without bevel
In the case of the classic installation, the planks are joined together without noticeable gaps.
› Closed overall impression
› Harmonious pattern

4-sided bevel
The 4-sided bevelled long and end edges underline the natural appearance, as every single plank is emphasised.
› 4-sided bevel (4V)
› 4-sided mini bevel (M4V)
Grade
Wood with character

Select
The harmonious texturing and delicate shades allow exceptionally tranquil and sophisticated flooring to be created with the Select grade.

Natur
For a floor design with a natural yet balanced overall effect, the Natur grade offers the best foundation.

Classic
The Classic grade features a lively spectrum between a harmonious, natural and earthy look.

Living
The Living grade is distinguished by a lively appearance and underlines the earthy character of the timber.

Rustikal
With a knotty look, a distinctive play of colours and an obvious grain, the Rustikal grade has a particularly natural, earthy effect.
Basic
The entry level to Parador quality
Those who are price conscious and do not want to forego quality will find an impressive selection of attractive engineered wood floors in the Basic line.

- Swell protection
- Guarantee: 10 years
- Suitable for underfloor heating
- 4-sided mini bevel (M4V)

Classic
Timeless elegance for higher demands
Uncompromising in quality, classic in design and universally applicable: the Classic line is made for people with clear values.

- Swell protection
- Guarantee: 25 years
- Suitable for underfloor heating
- 4-sided mini bevel (M4V)
- 4-sided bevel (4V)
Product lines
Home is where you feel comfortable

Parador opens up a wide variety of creative scope to those who want to make their home the most beautiful home in the world. Because as individual as people and their ideas about home living are, the range of Parador’s different floors is equally big.

Five product lines, three basic assortments plus two special collections, the design collection, Edition, and the sustainable Eco Balance collection, provide initial orientation for discovering the right floor for you easily and reliably.

Trendtime
Contemporary home design at the highest level

Impresses everyone for whom the floor is a statement: the Trendtime line provides a unique range of formats and designs for fashion-conscious furnishing at the highest level.

- Swell protection
- Guarantee: 25 years
- Suitable for underfloor heating
- 4-sided mini bevel (M4V)
- 4-sided bevel (4V)

## Underfloor heating

Suitable for installation on underfloor heating
Engineered wood flooring
Function and technology

Parador uses its many years of experience and its knowledge about the individuality of trees to make an attractive product range out of wood, with different formats, grades and surface treatments. Wood not only plays a critical role in terms of looks, but is also used exclusively in the 3-layer sandwich composition of Parador engineered wood flooring. What is more, intelligent click systems make tools superfluous and installation particularly easy and stable.
1. **Top layer**
   High quality solid wood with a thickness of up to 4 mm is enhanced with a lacquer finish or naturally oiled surface. The lamellar impregnation on the ends and the all-round impregnated top layer prevent moisture from penetrating and provide increased swell protection. Drying the wood gently prevents the formation of cracks.

2. **Solid spruce-fir middle layer**
   The solid wood core with raised annual rings gives Parador engineered wood flooring its excellent dimensional stability even under heavy duty use. The patented click mechanism milled into the wood ensures a long-lasting stable connection.

3. **Balancing veneer**
   Produced in the resource-saving hulling process, the balancing veneer made of solid spruce gives the planks extra dimensional stability.

4. **Click connection**
   The patented Parador click connections guarantee quick, easy, uncomplicated installation with high pull-out resistance and a long-lasting strong connection. For a permanently attractive floor covering and a strong bond between the individual planks. As the planks are self-aligning, a floating installation and gluing the whole area are easily possible. This is pleasing too: once the floor is installed, it is immediately ready to use.

   **Automatic-Click® system**
   With its patented click mechanism, the Automatic-Click® system ensures easy installation and optimal results every time.

   **Allround-Click® system**
   (herringbone installation)
   Innovative Allround-Click® system without the need for left and right-hand tongues for a particularly easy installation.
Accessories
Beauty with system

Those who are looking for longevity from their Parador engineered wood floor opt for quality every time. As a system supplier, Parador stocks co-ordinated accessories for installation and value retention. From skirtings, clips and end caps through to underlays and care products, Parador offers quality from one source: perfection – thought through to the end.

Skirtings
For the perfect finish

Parador stocks a wide range of real wood and decor skirtings for every taste. The real wood skirting that matches the engineered wood flooring ensures a perfectly harmonious finish. Alternatively, the colours stainless steel, white and black allow you to make a conscious statement and create an individual design.

› Real wood skirtings with veneer surface
› Excellent surface quality
› High quality MDF core
› Concealed cable routing
› Suitable for damp rooms
› Torsion-free

The mouldings are easy to fasten and assemble using the practical clip technology. End caps and transition caps as well as interior and exterior corners in various looks round off the Parador range.

Underlays
Feel good underfoot

Underlays reduce ambient and impact noise, and compensate for slight uneven patches in the floor. With an integrated vapour barrier, the right underlay ensures the necessary moisture protection on mineral subfloors.

Whether it is for renovation or a new build: Parador underlays perfectly bring out the quality of the floor covering.

Maintenance
For good care and reliable processing

Thanks to pre-finished surfaces, Parador engineered wood floors are easy to clean and maintain. So that you enjoy your floor for years to come, Parador recommends care products that specially match the surface.

That gives the assurance of always doing the right thing for the floor. Depending on how much the floor is used and exposed to loads, an initial care treatment is recommended for oiled floors immediately after installation. Smaller areas of damage such as scratches can be repaired on naturally oiled floors just where it is necessary.

As a system supplier, Parador makes maintenance and processing easier with suitable tools, installation aids, adhesives and repair pastes. This comprehensive all-round carefree package ensures lasting value and satisfaction with the floor.

Setting standards
Practising responsibility

As a traditional wood processing company, we have a particular awareness for our environment. For us at Parador, living with a certain quality standard goes hand in hand with the responsibility to conserve the planet for future generations. This includes handling our resources sustainably – by means of active reforestation. Every product made of wood makes an active contribution towards climate protection. As the only easily reproducible systems, trees break down CO₂, the greenhouse gas responsible for climate warming, into oxygen and carbon.

As carbon reservoirs essential for the survival of the planet, people will increasingly become conscious of using wood products, especially in the area of building and renovation. Products made of wood and wood-based materials are sustainable and help to secure the future of the next generations.

FSC® certification
Wood products that come from forests managed in an exemplary manner are awarded this trademark. For this purpose, the Forest Stewardship Council (FSC®) sets strict environmental requirements worldwide as well as high social and economic standards. Parador takes this path voluntarily out of conviction.

PEFC™ certification
PEFC™ is a global organisation with the aim of establishing sustainable forestry worldwide. Every product that bears the PEFC™ label, comes from a certified product chain, in which the forestry management, including the transport of the wood to the forest road, is featured.
Responsibility in society

As an internationally operating company, we are aware of our social responsibility. We have been committed to the Plant-for-the-Planet foundation since 2011. Children from all over the world have come together to form a network under the umbrella of the student initiative – with the aim of ending the climate crisis. Their way of achieving this: acting immediately, because tough talks do not stop the glaciers and rain forests from disappearing. Instead, Plant-for-the-Planet is planting trees as a sign of climate justice – until a billion new trees are planted worldwide by 2020.

As a wood processing company, active reforestation in particular is an important element of our social responsibility. We support the initiative with tree-planting campaigns, children's academies and numerous other events. And with great success: we have trained 378 children to be climate ambassadors and planted 107,587 trees.

Responsibility in production

Starting with production, we set standards with our innovative floors and panels across their entire life cycle. We thus develop and produce solely at our sites in Germany and Austria. Our focus is on environmentally-friendly manufacturing with natural materials. We get our main raw material, wood, from predominantly sustainably managed forests. We are therefore able to supply real wood that comes solely from monitored sources of supply. The environmental standards defined by us apply along the entire value creation chain, starting with our suppliers.
Our work is characterised by the way we conserve resources. We prevent emission and feed recyclable materials back into the production cycle. Whilst the use of predominantly domestic timbers in the manufacture of engineered wood guarantees short transport routes, the support material of our other floors and panels consists entirely of recyclable materials. The decor papers used on our laminate floors are composed of certified materials.
