

BUSINESS OVERVIEW

Guardtime OÜ is a systems engineering company engaged in hash-based cryptography and distributed ledger technologies. Established in 2007 in Estonia, Guardtime has 200+ employees in offices worldwide.

Guardtime focuses on building core technology and value-added solutions that provide real-time situational awareness into the integrity of electronic systems, processes and data. If Google organises the world's information and makes it universally available, then Guardtime validates that information and makes it universally reliable.

BUSINESS PRODUCTS

Guardtime's core value proposition is cryptographic data and process integrity.

Guardtime is one of the world's leading blockchain technology companies, with its core technology KSI® Blockchain in production since 2012. KSI Blockchain® is the only blockchain technology platform that is proven to work at scale, used in production by the US military and some of the largest companies in the world to solve data management challenges. The EU eIDAS-certified based timestamping enables its customers to know and be able to prove whether any part of their systems or stored electronic data and logs have been changed, either by insiders, external actors, or technical malfunction. It provides a mathematically tamper-evident audit trail and evidence for post-incident investigations, establishing who, what and when with forensic precision.

One of Guardtime's flagship product MIDA represents a new approach to cyber security. As a solution for controlling cloud and edge computing, MIDA delivers real time, byte-by-byte level information of what is happening in cloud services. All Guardtime's businesses are based on the same underlying technology platform, enabling us to go from idea to production in a matter of months.

Guardtime's expertise is in building enterprise solutions together with our partners, leveraging the KSI technology stack to build new products and services which we then take to market. All Guardtime's businesses are based on the same underlying technology platform, enabling us to go from idea to production in a matter of months.

COMPETENCIES

- Defence
- Insurance
- Healthcare
- Energy
- Cybersecurity
- eGovernment
- Cyber Ranges
- Telecom
- Audit and Compliance
- Crypto Custody
- Central Bank Digital Currency
- Etc.
