

# PostgreSQL Database Engineer

at Positium, in Tartu, Estonia

You are curious about big data. You're not afraid of challenges and enjoy solving puzzles. You wish to work in an active international team with witty colleagues. You've always wanted an office with a view. You dream about making the world a better place. Sounds familiar?

## Your main tasks will include

- optimisation of PostgreSQL: finding options for making the existing system and queries work faster and better;
- defining the appropriate configuration parameters for Postgres database;
- monitoring the existing system run in client servers, debugging;
- solving problems that emerge in relation to databases and datasets;
- archiving, back-up and restoration of databases;
- migrating databases and upgrading PostgreSQL versions;
- database design and architecture;
- PostgreSQL role and permission management;
- PostgreSQL data security management.

## A successful candidate

- has 2 years of software development experience;
- has 2 years of experience using and administrating PostgreSQL, Oracle or MySQL/MariaDB;
- has a desire to develop oneself in the field of administration and optimisation of database servers;
- has great analytical skills and a proactive attitude – the ability and courage of offering your own solutions;
- has a demanding mindset and self-discipline in order to reach the goals set and not to settle for less in terms of conditions;
- is permitted to work in the EU;
- must be able to work in our office in Tartu;
- is excited by crunching big data.

If this sounds like you, send your CV and cover letter to [jobs@positium.com](mailto:jobs@positium.com) by 30 June 2020.
