

PANDJU

DIY traditional style canoe

Building a boat yourself is a lot of fun during winter and gives unmatched satisfaction on the water the next season.

JRCRAFTYARD.EE offers you all-inclusive boat kit to build a traditional style wooden canoe. CNC cut plywood kit allows easy construction for first-timers, including slot-together frames, pre-drilled holes for stitch-and-glue, puzzle joints, and high precision in the fitting of parts.

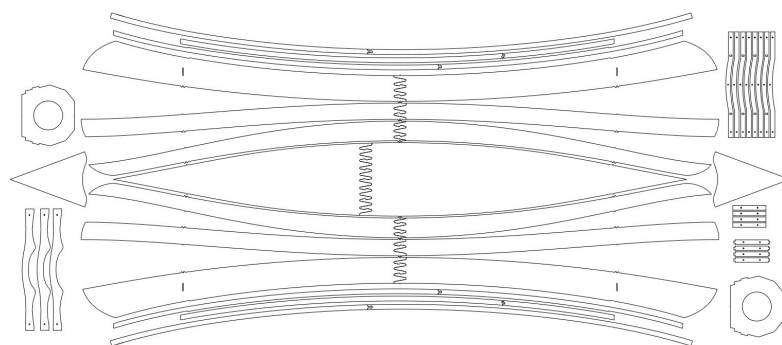

Canoe "Pandju" is relatively beamy and therefore very stable boat. It is designed with two seats but

can easily accommodate a family with kids. Both ends have big watertight compartments for extra safety and can be used for storing camping gear.

Okume marine-grade plywood of 5mm thickness is used for the hull construction, and 10mm for the gunwales, seats and yoke.

With "Pandju" boat kit you don't have to worry about where to find good quality epoxy, fillers, glass-fiber cloth or hatches. As said - all materials you need are included in our kit so you can focus purely on the process of building.

Stand out from the crowd and build a boat yourself!

"Pandju" DIY boat kit: 850 €
(20% VAT inc., shipping fees from Estonia apply)

Kit includes: CNC precut plywood parts, epoxy and hardener, fillers, fiberglass cloth, hatches, cable ties, webbing for seats, hardware and build manual.
