

Why helper tower Kiki is the best for you kid?

With NIPSTI! helper tower Kiki we have put special focus on making the helper tower as **safe** as possible for your kid and at the same time **convenient** for you as a parent **to use**. Having this in mind we have designed a helper tower that has the following characteristics:

- **Anti-slip surface inside**

Activity in the kitchen often involves water and you can be sure that some of it also lands on the platform of the helper tower where the kid is standing. Smooth surface becomes dangerously slippery when water gets on it, but the standing platform and step of Kiki is covered with anti-slip surface which does not get slippery when getting wet. Thus there is a smaller risk for for your kid to slip and fall.

- **Stability**

Kiki is relatively heavy (11 kg), which ensures stability of the tower and makes it difficult for the kid to tilt or overturn it. At the same time this does not mean that the parent needs to use enormous force to move the tower. The design of Kiki is such that it can be easily lifted. And if you really do not feel the strength to lift it, you can slide Kiki on the floor by using the rounded corner of the tower's front "legs".

- **Clean outer surface**

The outer surface of Kiki is clean and free of additional widgets both in tower-position and desk-position. Kiki does not have protruding metal hinges nor screws that can, upon using the tower, injure the kid, damage kitchen furniture or to which the kid or parent can get stuck with their clothes.

- **Easy to clean**

When acting in the kitchen it often happens that some of the raw material misses the bowl or pot and lands on the floor or on the tower. And when the small busy hands have finished preparing the meal, Kiki may be coated with flour. Fortunately this does not mean that the parent then needs to vigorously scrub the helper tower. For Kiki it is enough if you use a damp cloth and the tower is clean again.

To ensure that the use of Kiki would be as safe as possible for your kid, make sure to follow the user instructions and warnings that we have given and that can be found in the product package and also [HERE](#). The kid must NEVER be left on the helper tower without adult supervision, because little action-minded companions require adult's helping hand to safely explore the world.
