

Startrex Product Sheet

Startrex

Is an organic soil conditioner with a high concentration of beneficial soil bacteria.

Startrex is a rich humus, produced from juiced grapes, that are partially decomposed.

Startrex contains a large quantity of soil bacteria that work immediately to improve the soil condition and ensure a better uptake of organic fertilisers.

Most potting soil is sterilised to kill weed seeds and germs. This also kills all the beneficial soil bacteria and fungi. The result is that it takes a long time for the soil life in your potting soil to become established.

Mixing your potting soil with Startrex brings your soil to life immediately. Startrex promotes the development of mycorrhiza fungi and stimulates the growth of beneficial soil bacteria, the well being and the overall health of the plants.

Startrex gives your crop an explosive start, your plants will root faster and growth will flourish at a tremendous speed.

Directions for use:

Indoor: Mix your potting soil with 50 grams of Startrex for every 10 litres of potting soil.

Outdoor: Mix your soil with 250 grams of Startrex for each m² of soil.

Store in a cool, dry place.

Keep out of reach of children.

Not suitable for consumption.
