# Door Opener

We open doors for you.

No intercom system without door opener! Thanks to the unlocking function, you can open the door for your visit in a relaxed manner. With Grothe door openers you are only a small lever away from modern living comfort.

**Arresting / Releasing**

**Function of (impermanant) arrester**

When the door opener button is pressed the lock installed in the door opener is overridden for a specified period of time to enable the door to be opened a single time.

If the door closes again, the mechanical lock function is automatically activated again.

Advisable for direct-current operation, as here the electrical release is not audible in contrast to the alternating current mode (humming noise).

**Function of (permanent) release mechanism**

The mechanical release mechanism installed in the door opener enables the door to be kept open for as long as required or to return it to its normal function simply by moving a small lever or turning an adjusting screw (depending on model).

This is advisable in buildings with restricted office hours (doctor's practice etc.).

**Standard door opener with large box**

**Description**

- For type of function, see ordering overview
- DIN links — (can be used asymmetrically on the right and left)
- Compact design
- Perforated closing panel

**Technical data**

- 8–12 V AC/DC (0.8A)
- Closing panel 250 x 25 x 3 mm
- Latch length 46 mm
- Box dimensions 28 (depth) x 90 x 20 mm
- Short-term load 20 sec.
