Carport

Protect your ride in style

A warm home is inviting, functional, and stylish. A carport maximizes your available space, while our premium aluminium designs offer both durability and aesthetic appeal, customised to suit your preferences and needs.

Beyond functionality, a carport enhances your home's overall value and curb appeal. It offers reliable protection for your vehicle against the elements while seamlessly integrating with your home's architecture. With a range of finishes and configurations available, our carports are designed to elevate both convenience and style.

Comfort

Comfort meets design. Precision engineering ensures that each element of the carport fits seamlessly. Expertly designed and assembled, it provides reliable protection from wind and weather, allowing you to enjoy its benefits in peace. Whether parking your car, charging your e-bike, or unloading groceries, the structure supports your daily routine with ease and elegance.

Fixed canvas roof

Protect your car from the sun and ensure a cool ride when you're ready to head out. The fixed canvas roof keeps you - and your ride - at the right temperature. No more sweaty rides in summer or icy winter starts. And you avoid getting wet when loading or unloading your car on a rainy day.

Say yes to a streamlined and beautifully finished design, combining a robust, anti-condensation coated, upper roof in steel plate and ultra-taut screen fabric.

Sliding or fixed panels

Enhance your carport's architectural appeal with Loggia panels. These stylish panels offer increased protection from the elements and added privacy. Choose between fixed or rotatable blades in wood or aluminium or choose screen fabric to create a look that reflects your style, while enjoying the extra comfort and versatility they provide.

Privacy

With Loggia Paro Privacy panels, the blades can be manually rotated to the desired position.

Sliding system

The sliding system rests on a bottom guide that compensates for level differences of up to 6 cm thanks to the patented Flexguide technology.

Fixed walls

Why not add side walls to provide your car with premium protection against the elements, e.g. rain, wind, frost, hail, and more?

Linus walls can be installed at full height or at a height of your choice, with both sides finished with aluminium.

Both sides of the wall are also aligned with the column, creating an elegant and cohesive look.

Linus® fixed wall

Storage room

Need a safe place for more than just your car or bike? Add a lockable storage room to your carport for peace of mind. By finishing the wall with Linarte, wooden cladding from Renson or another material of your choice, you also create an aesthetically coherent and refined whole.

Customisation

Just like your car, your carport should reflect your personal style. You can easily integrate them into your project. Choose the ideal colour for the aluminium structure, ideally matched to your home's joinery, for a harmonious look. The choice of fabric for the canvas roof also determines further aesthetics. And of course lighting is an undeniable added value, both practical and atmospheric.

Personalisation

Additional options

Personalisation

Aluminum

Our carports (structure and fixed walls) are available in any RAL colour, so you will definitely find the perfect shade to match your style. By perfectly matching the colours with your existing architecture, you create a harmonious whole with a strong look.

Canvas roof

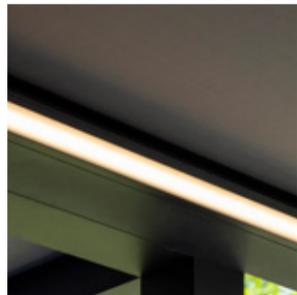

The roof is finished with a unique patented tension ceiling. Choose from eight colours of fibreglass fabric. The result? A horizontal, sleek look, perfectly streamlined and utterly stylish.

Additional options

With functional light in your carport, you always feel safe. Whether arriving home after dark or heading out early, functional lighting helps you see clearly and move confidently, eliminating uncertainty with every step.

Up/Down LED

Discreetly built into the aluminium frame, the integrated LED system offers both upward and/or downward lighting options. The Up/Down LED provides soft indirect lighting or focused direct light, creating the perfect illumination for any time of day.

Surface-mounted power socket

Include a power socket in your carport. It comes with a 230 V or USB-A connection and is splash proof (IP55). You can opt for a single or double socket.

Smart control

The Renson Connect App is a perennial favourite for smart control of your carport lighting from your smartphone or tablet, even when you're not around. Prefer a physical control method? A simple remote control or wall switch answers your needs. Or go for the ultimate in convenience and add your carport lighting to your home's wider automation system.

TIP: Which type of lighting should I choose?

Warm white (2700 - 3000 K)

Warm white LED lighting creates a soft ambiance that mimics the warmth of natural light. It elevates your functional structure into an atmospheric element.

Pure white (4500 - 5500 K)

Pure white LED lighting offers a bright, cooler tone, bringing an energetic and fresh look. Perfect for sleek modern architecture.

RGB

For those looking for a dynamic lighting effect, the RGB colour option offers endless possibilities to redefine the atmosphere of your carport at any time.

Quality

Our carports offer different levels of protection and comfort. To ensure this comfort, they are thoroughly tested for water drainage, load-bearing capacity and wind resistance.

Structural strength

Sustainability

State-of-the-art facilities

Structural strength

At Renson, we guarantee the highest quality standards by having our products thoroughly tested and certified according to the strictest industry standards.

27 m²

Aluminium structure

The carport is built with extruded aluminium profiles, which are known to be light, strong, rust-resistant and able to withstand extreme weather conditions.

120 l/m².h

Water drainage

Water resistance and drainage are tested using a spray system that simulates rainstorms. In this way, we determine the flow rate of our carports and how this can be further optimised.

100 kg/m²

Load-bearing capacity

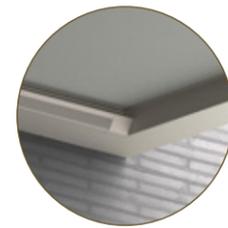

A carport is subjected to various weather conditions, such as wind and snow. These forces were determined through static strength calculations and validated by internal tests. The maximum load capacities depend on the basic structure, surface area, model, inserts used and the location. As a starting point, the structure can deflect 1/200th of its longest dimension, without permanent deformation.

120 km/h

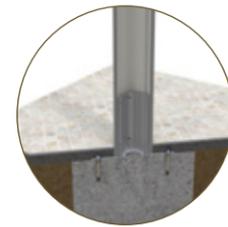

Wind

The fixed steeldeck roof can withstand wind speeds of up to 120 km/h. So your carport does not budge even during stormy weather. We use a tightly stretched canvas equipped with Fixscreen technology that can withstand wind speeds up to 120 km/h.

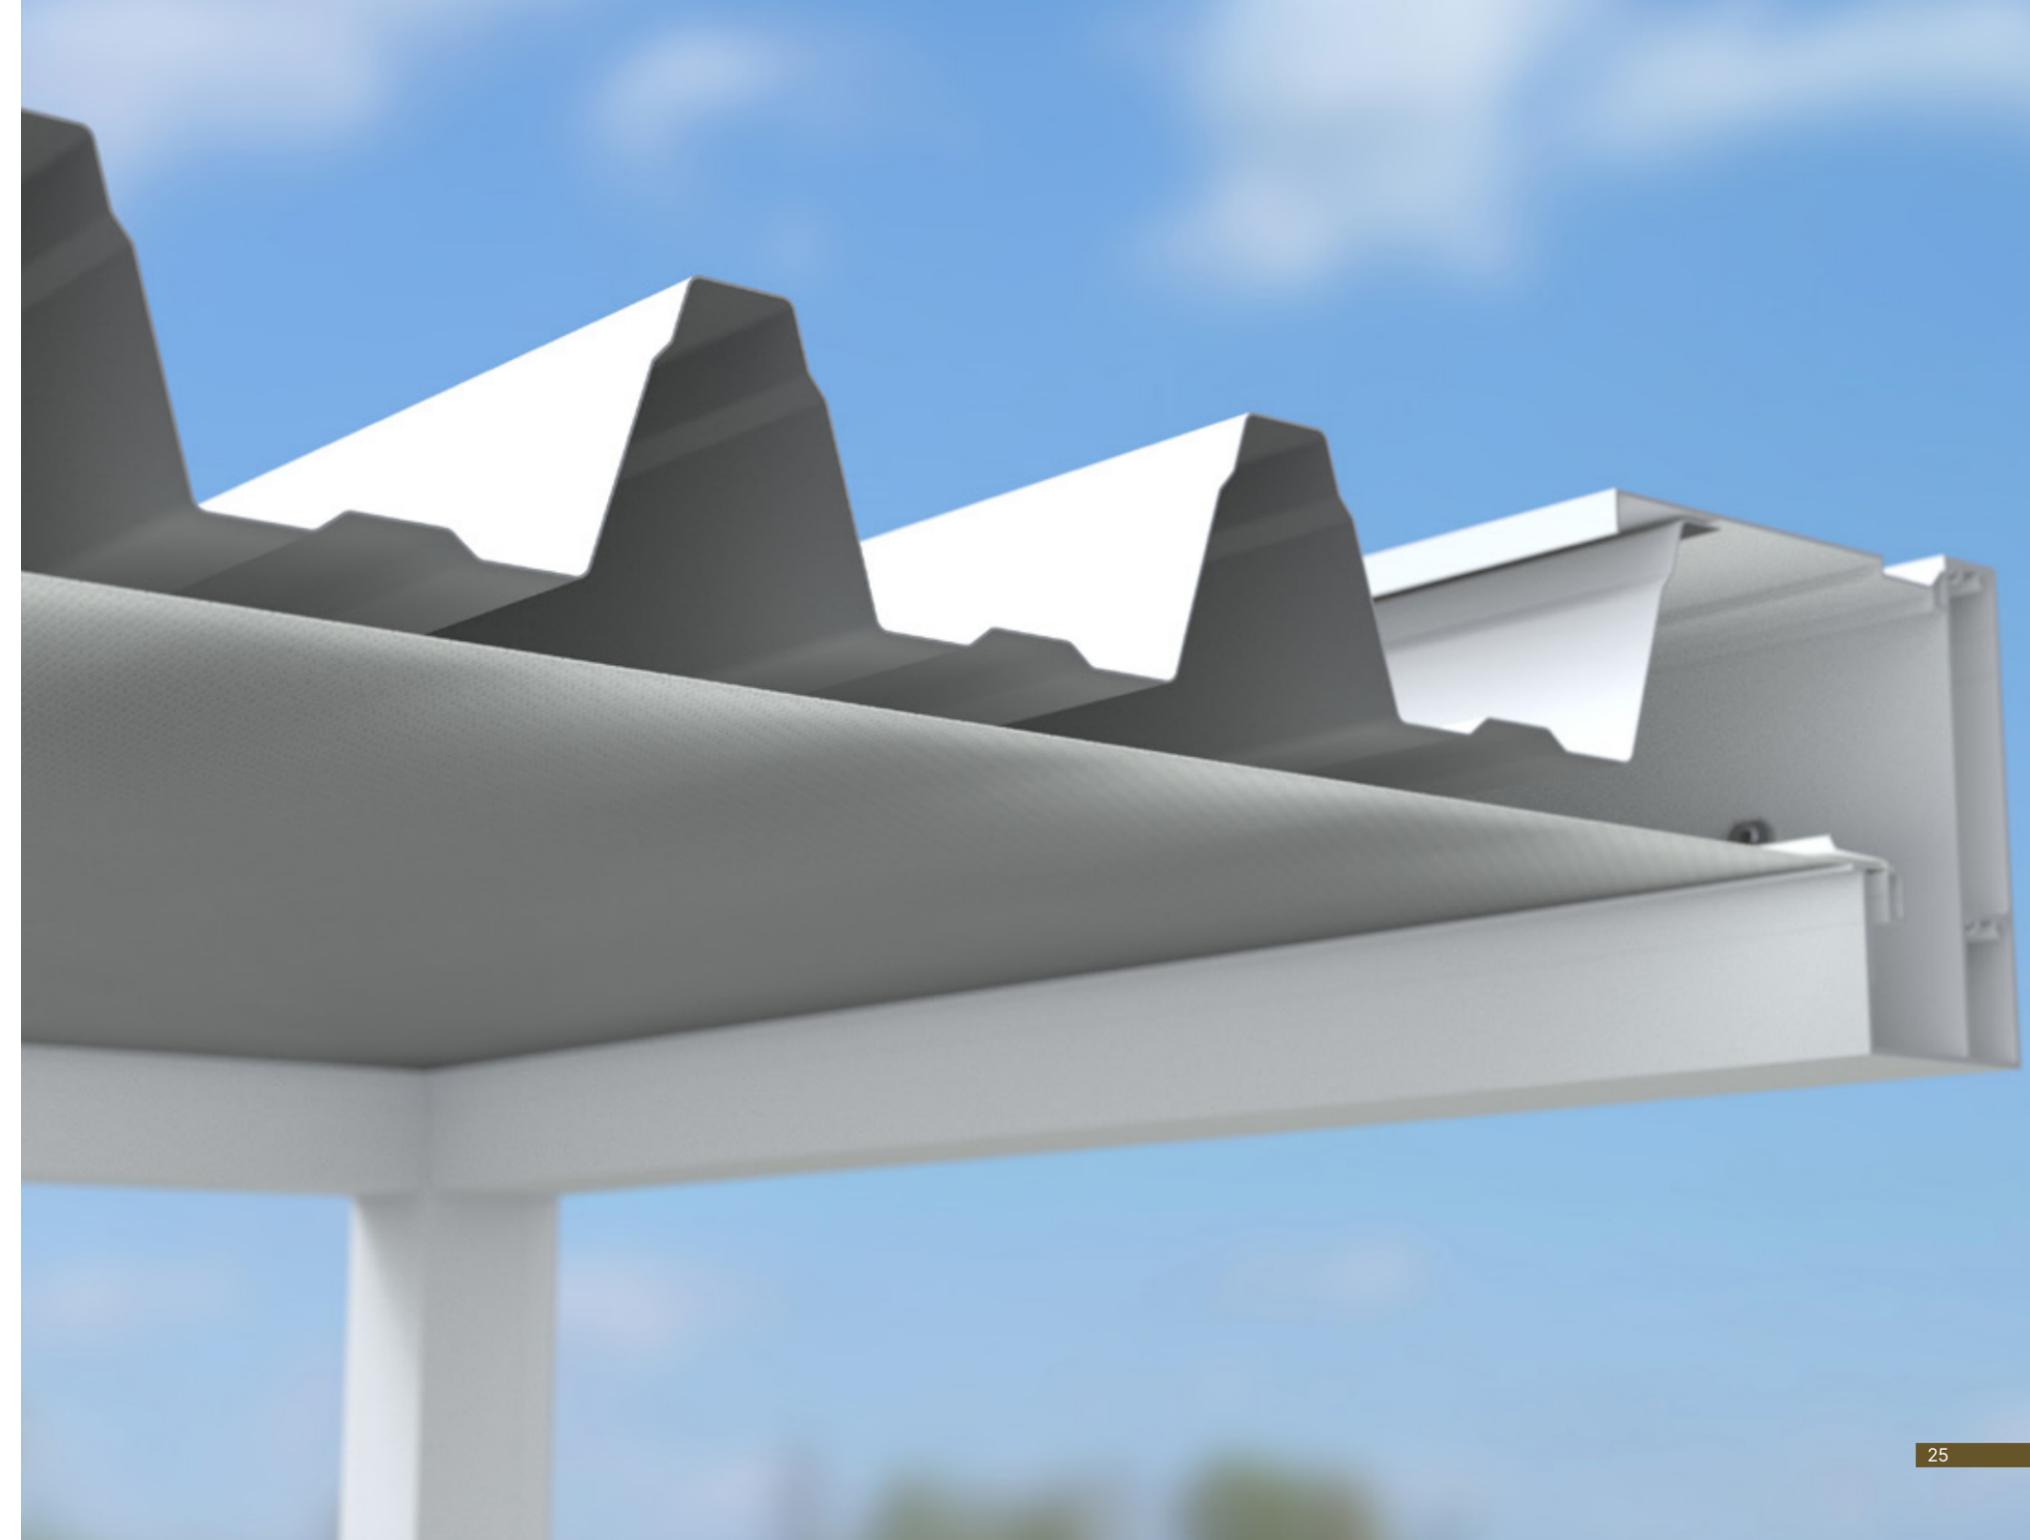

High-quality roof finish

Luxurious detailing of the sleek screen fabric beneath the steel deck construction

Invisible strength

The carport's fully enclosed column structure guarantees its solid quality.

Sustainability

The choice of aluminium as the main material for the Renson carports is a very conscious choice. It sets the tone of our sustainable outdoor living story.

Aluminium is highly resistant to natural weather influences and requires minimum maintenance. Moreover, the fact that it is highly recyclable helps reduce our ecological footprint.

Furthermore, our products are manufactured in a state-of-the-art production facility powered by renewable energy, where we adhere to strict standards for minimal emissions. The result is a carport that meets the highest standards.

Warranty

Register your carport online after installation, and receive a 10-year product warranty on both the structure and paint.

¹ 10 years after registration. Standard 5-year warranty for installations located less than 500 meters (1,640 feet) from the coast or in areas with heavy pollution. This applies to wood design elements, aluminum castings, and mounting brackets. Important: Chlorinated fumes in an outdoor environment will not affect the motor system. However, direct contact between the columns and/or mounting brackets and chlorinated water may cause the coating to peel. For this reason, the patio cover should ideally be installed in a location where it is not directly exposed to swimming pool water or seawater. Damage caused by such exposure is not covered under the warranty.

² Rippling typical of polyester fabrics is not covered by the warranty. 2 years warranty on Crystal full width.

Renson Maintenance Set

Your carport is designed to last many years outdoors, in different weather conditions. To maximise the life expectancy, we advise cleaning and maintaining it annually with the Renson Maintenance Set. The products in this set are carefully chosen and help preserve the intense colour and shine of the powder-coated aluminium, offering extra protection against acid rain, sea air and UV rays.

Minimal maintenance, maximum enjoyment

Renson is very focused on ease of use and maintenance. Because the less time you have to spend cleaning, the more time you can spend enjoying the outdoors.

State-of-the-art facilities

1. Automated warehouse

- 27-metre-high warehouse
- 28 floors
- Artificial intelligence

2. Handling profiles

- Automated processes
- Sawing, milling, sanding, welding ...

3. Aorta

- Buffer storage
- Powder coating optimisation

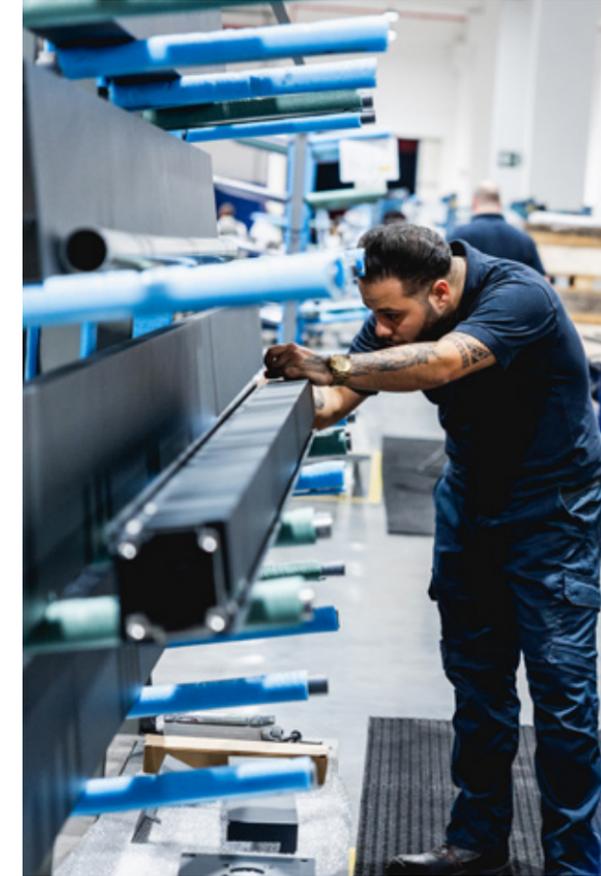

4. Lacquering

- 2 kilometre-long rails
- 3 spray cabins
- + 300 standard colours

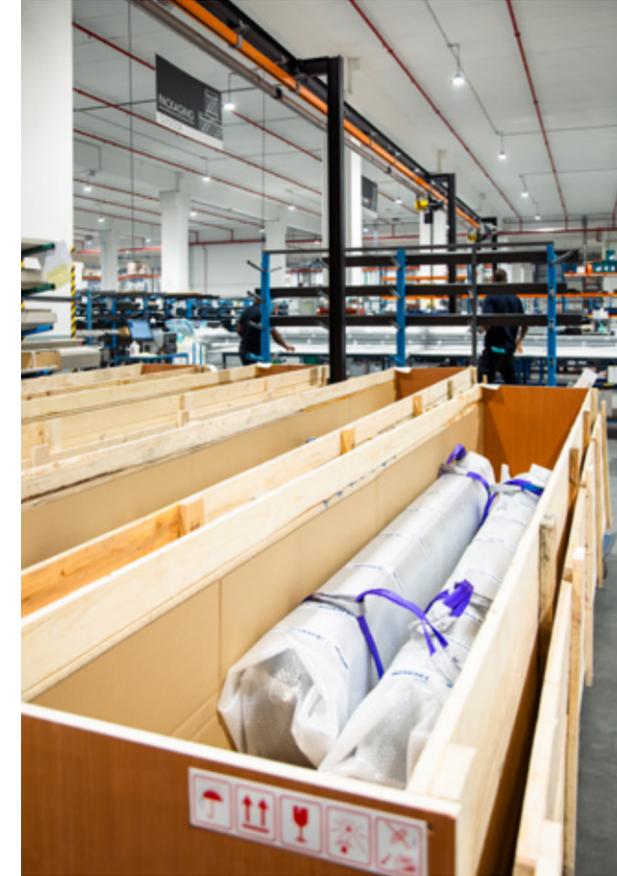

5. Assembly

- More than 500 parts
- Maximum pre-assembly (both mechanical and electronic)

6. Packaging

- Packed in a strong wooden box for worldwide shipping

Official Renson professionals worldwide

To guarantee our high-quality and durable products are also placed professionally, we have built up an extensive network of well-trained Ambassadors and Installers.

These Ambassadors have years of experience in the sale and installation of Renson products. They always stay up to date with the complete range and guarantee the best possible professional assistance.

Our Ambassadors can demonstrate our products in their showrooms, and will ensure everything is placed professionally and properly. They also guarantee a professional after-sales service.
